Acrylic Monofocal

CUTTING-EDGE TECHNOLOGY IOL

Synthesis® is a new acrylic monofocal intraocular lens, developed and manufactured by CUTTING EDGE, expert in IOLs design.

Cutting Edge builds experienced and dedicated teams to design, prototype and manufacture high-quality Intraocular Lenses. Our state-of-the-art facility honours the quality and process sophistication of the medical device industry.

The proximity of our Research & Development team to our manufacturing operations is truly significant for building close links and in using a results-orientated approach.

Cutting Edge masters all manufacturing stages in house, from machining to optical and mechanical tests, through to packaging and international logistics.

Synthesis was engineered by a team who fully believe that the human eye is both fragile and precious and requires the utmost in precision, “savoir-faire” and faultless industrial quality.

THE LATEST ALL-IN-ONE INNOVATIONS PLATFORM

SAFETY

- **Material**
  Clear or blue-light-filtering option
- **Design**
  - 4 point fixation haptics
  - 360˚ C-Edge+ square edges
  - Orientation notch on optic edge
- **Truly MICS enhanced characteristics**

REPRODUCIBILITY

- **Optic**
  - 6 mm diameter optic
  - Anatomically friendly with 3 overall diameter
  - Aberration neutral Aspheric lens
  - Posterior shift features
- **Injection**
  - Latest injection system options

From -10.0 D to +40.0 D

- 1 D increment between -10.0 D to +10.0 D & +31.0 D to +40.0 D
- 0.5 D increment between +10.0 D to 30.0 D

OPTICAL QUALITY

- MTF curves exceed ISO 13485 norm
- UV and blue-light-filtering option

CUTTING EDGE

SAFETY

Synthesis®
Acrylic Monofocal

MATERIAL

- Acrylic copolymer successfully **used for more than 17 years** in ophthalmology
- **Ultraviolet absorption**
- **Blue-light-filtering** option (yellow)

DESIGN

- **4 point** fixation haptics
- **3 overall diameters** to fit the capsular bag:
  - 11 mm from -10.0 D to +15.0 D
  - 10.7 mm from +15.5 D to 22.0 D
  - 10.5 mm from +22.5 D to +40.0 D
- **Enhanced C-Edge+** ≤ 5microns 360° square edge

Overall diameter
- 11 mm
- 10,7 mm
- 10,5 mm

Synthesis® Toric

2019

The **Synthesis® Toric** is engineered by a Research and Development team experienced and dedicated to the design and manufacture of high-quality intraocular lenses.

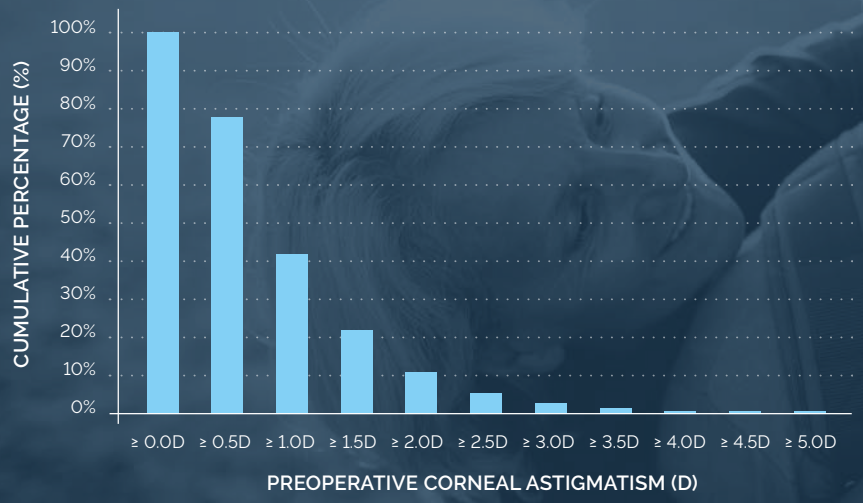
The **Synthesis® Monofocal**, **Synthesis® ⊕ EDOF** and **Synthesis® Toric** comprise of a unique family of micro-incision IOLs designed for the health care professional and to make a contribution to patient well-being.

Managing astigmatism is made easier by combining the strengths of: a proven rotational stability IOL platform, a large combination of sphere/cylinder options and the latest intuitive **Synthesis® Toric** online calculator.

ASTIGMATISM
PATIENT CARE

- **Astigmatism needs to be treated** to reduce the dependency on glasses for distance vision.[1]
- **78% of the cataract patient population present with corneal astigmatism ≥ 0,5 D.**[2]

Distribution of preoperative astigmatism in patients undergoing cataract surgery (N=110,468)[2]



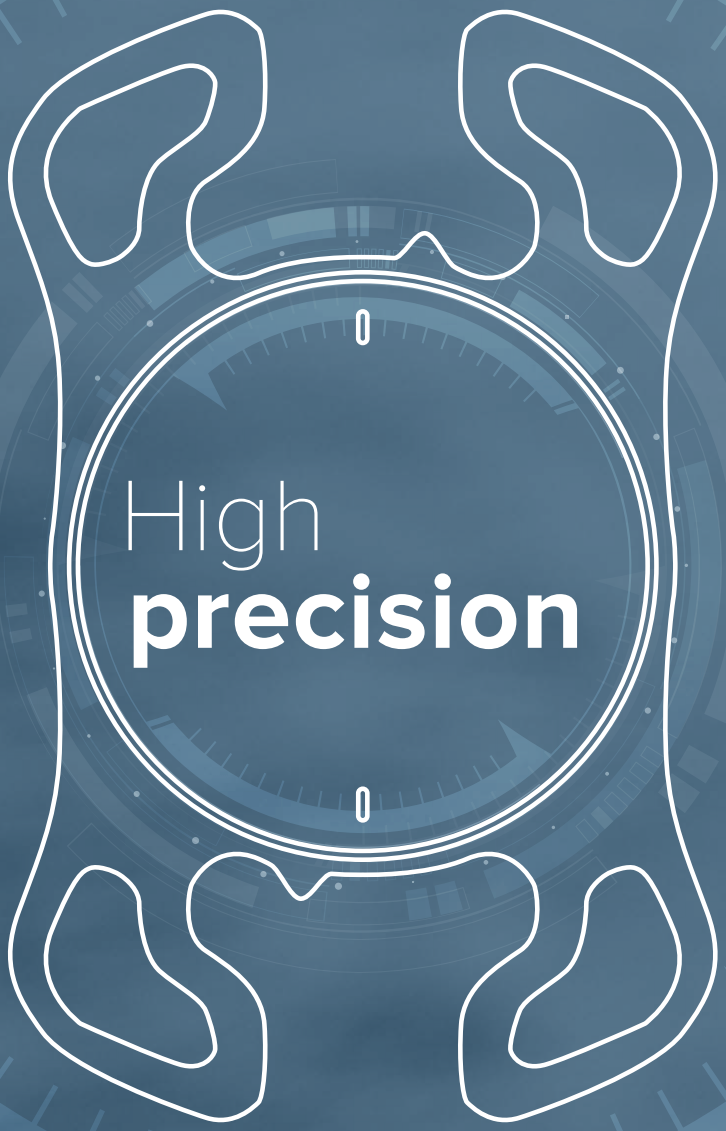
TORIC IOLS CAN OFFER AN EFFECTIVE SOLUTION.[4]

THE ADOPTION AND USAGE OF TORIC IOLS REMAIN RELATIVELY LOW DEPENDING ON THE COUNTRY, RANGING FROM (4 to 9%).[3]

Takes into consideration all sources of astigmatism [5]

Utilises the latest generation online calculator [6]

Offers a large combination of sphere/cylinder



High **precision**

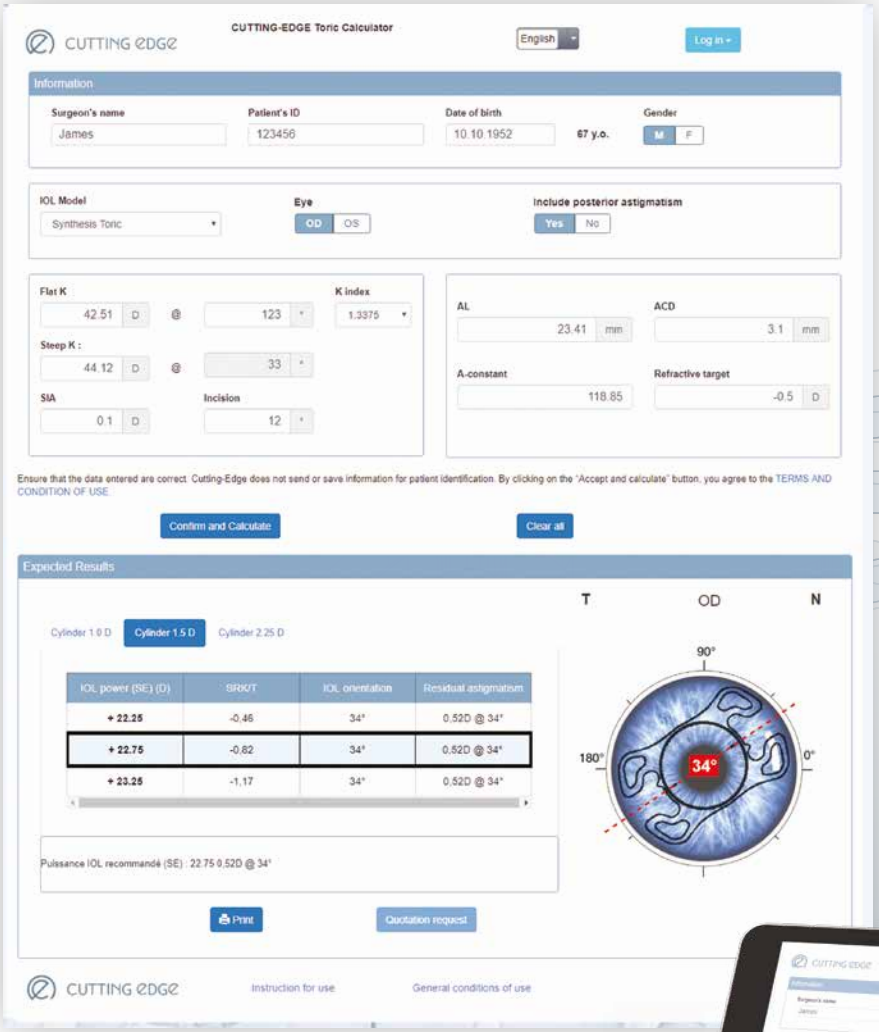
Ensures rotational stability [7]

Minimises surgically induced astigmatism [8]

CUTTING EDGE

NEXT GENERATION
ONLINE CALCULATOR

- **Takes into account posterior corneal astigmatism.**
  - Ignoring posterior corneal astigmatism may lead to the incorrect estimation of the total corneal astigmatism.[5]



toriccalc.cutting-edge.fr

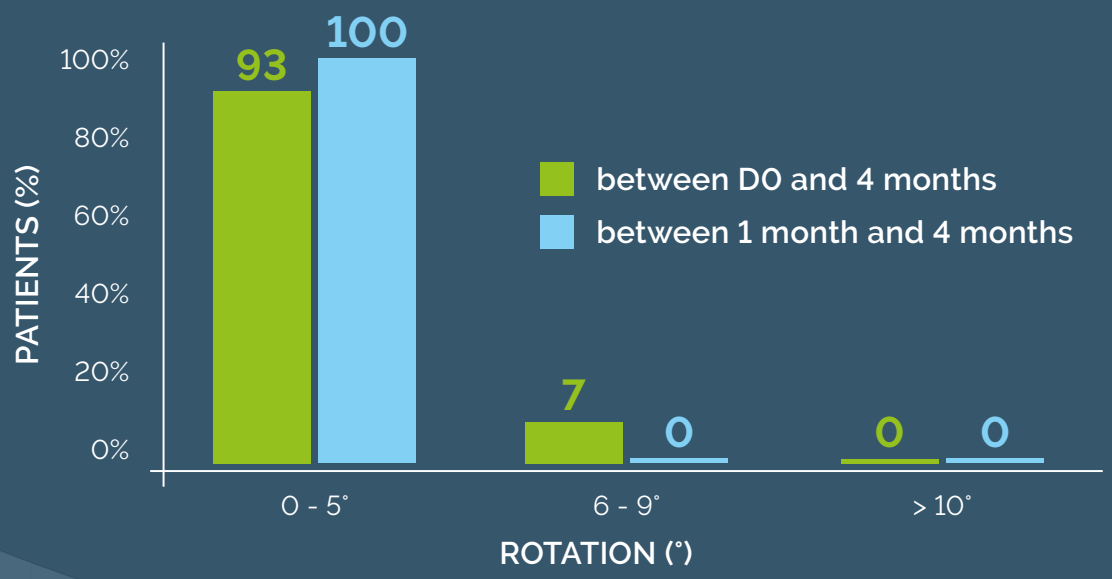
CUTTING EDGE

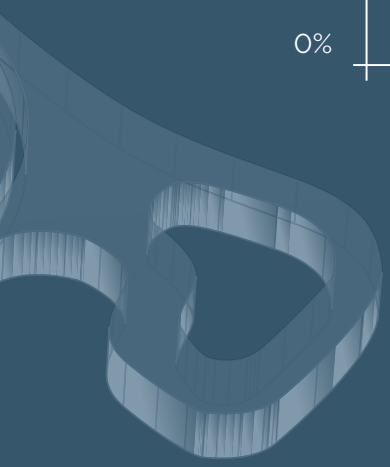
CLINICAL RESULTS
ON ROTATIONAL STBILITY

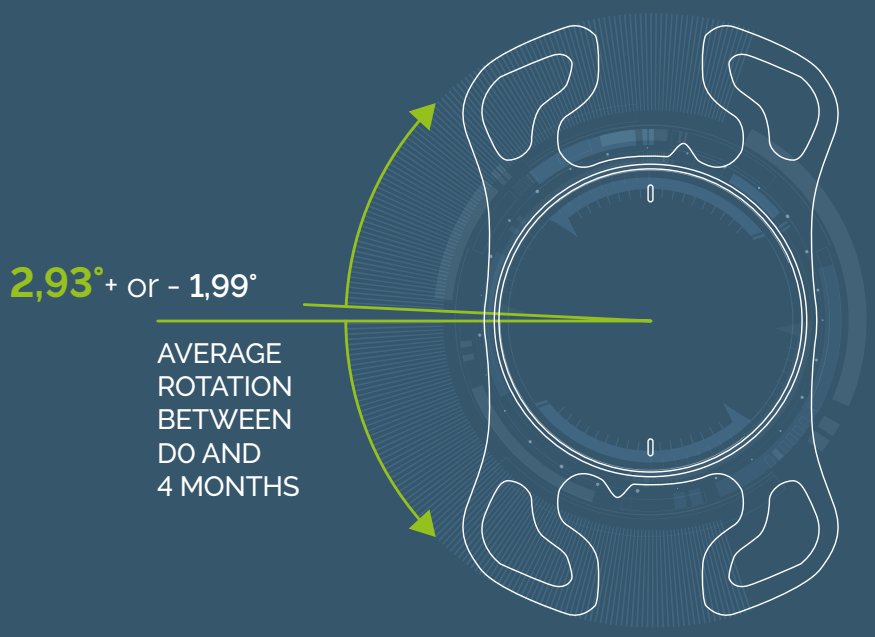
- **Primary objective:**
  Synthesis 11 mm platform rotational stability analysis with 4 months follow-up.[9]

- **Prospective monocentric clinical study.**

- **Clinically proven rotational stability:**
  93% of patients with less than 5° rotation from surgery day (D0) over a 4 month follow-up period.
  Average rotation of 2.93° at 4 months.







LARGE RANGE

- **Sphere**
  from +5,00D to +32,00D
- **Cylinder**
  from +0.75D, +1.0D, +1.50D, +2.25D, +3.00D, +3.75D, +4.50D, +5.25D, 6.00D
- **MiCS** 1,6 mm
- **Synthesis® Toric can treat corneal astigmatism from 0.50D.**

LOADING GUIDE

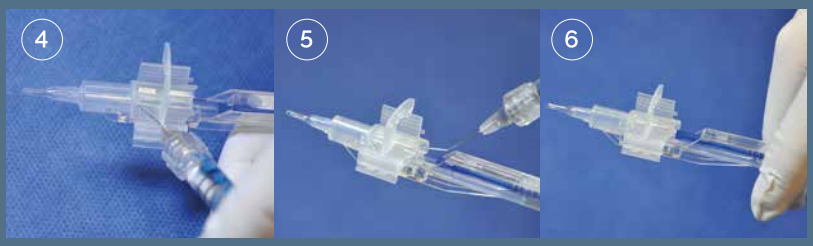
Synthesis® Toric

References	**PRELOADED**
Synthesis Toric Clear	**SIPT**

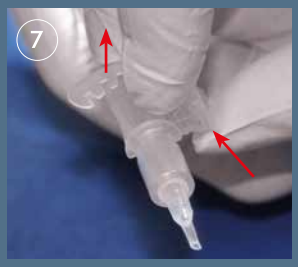
PRELOADED

1. Open the container; remove the loading cartridge that contains the IOL from the container by pulling on the armature taking care not to remove the protective clip.
2. Insert the loading cartridge into the injector body until it locks into position.
3. Carefully rinse the lens with balanced salt solution.

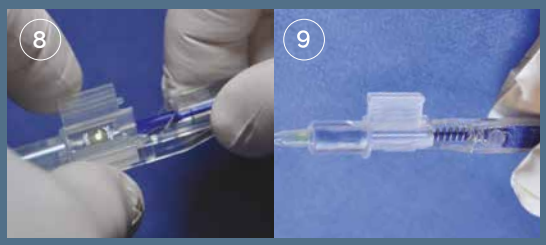
4. Through the filling hole, fill the cartridge tunnel with viscoelastic.
5. Fill a small amount of visco behind the lens at the rear of the loading chamber.
6. Push the plunger until the silicone tip approaches the rear of the loading chamber.



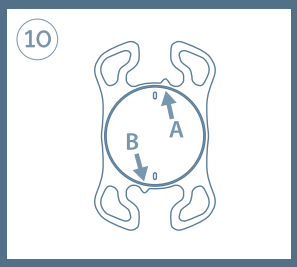
7. Carefully remove the clip from the loading chamber:
   - Grab the armature with two fingers while rotating the bottom hinge upwards with the thumb
   - Lift vertically.



8. Check that the lens is correctly positioned and close the wings of the loading chamber. When loaded correctly, you will hear a “click” sound.
9. Push the plunger to position the implant in the cartridge tunnel. The system is ready for injection.



10. Once implanted, the orientation features of the Synthesis® Toric’s implant must be oriented at the top right (A) and at the bottom left (B).



Reserved for health care professionals. Please refer to the operating instructions.

Synthesis Preloaded

PRELOADED ABERRATION FREE ASPHERIC LENS

Models SIP and SIPY (yellow)

CUTTING EDGE
sense of innovation

EN INTRAOCULAR LENS

DESCRIPTION:
The Synthesis intraocular lens (IOL) is a single-piece ultraviolet (UV) absorbing posterior chamber IOL developed to replace the natural crystalline lens in pseudophakic adult patients. The Synthesis IOL has aspheric optics designed to be free of spherical aberration. The preloaded intraocular Synthesis lens is supplied with an Accuject Pro Delivery System to provide a sterile, controlled and touch-free method of delivery of the lens into the ocular bag. The Preloaded Synthesis IOL is supplied in 2 different models - Models SIP or SIPY.
See label on the cardboard box for type of the lens.

1577003

PHYSICAL CHARACTERISTICS:

Lens / Haptic Material	Model SIP: Foldable hydrophilic acrylic copolymer containing a UV absorber. Model SIPY: Foldable hydrophilic acrylic copolymer containing a UV absorber and a blue light filtering chromophore.
Material Characteristics	Index of Refraction when wet at 20˚C: 1.460 Index of Refraction when in the eye at 35˚C: 1.459
Spectral Transmittance	Model SIP: 10% transmittance at 365 nanometers for +20.0 diopter IOL. Model SIPY: 10% transmittance at 374 nanometers for +20.0 diopter IOL. See **FIG.8** with chart's X-value = Wavelength (nm) and Y-value = % Transmittance
Optic Type	Aspheric aberration free
Powers	-10.0 to +40.0 Diopters
Dimensions	Body Diameter: 6.0 mm; Overall Diameter: 10.5 mm to 11 mm across the diopter range; Haptic Angle: 0˚
Lens Orientation	The anterior side of the lens is facing up towards the anterior side of the eye. As illustrated in FIG.7, when the orientation features are top right (A) and bottom left (B), you are facing the anterior side of the lens.

INDICATIONS:
The Synthesis posterior chamber lens is indicated for primary implantation for the visual correction of aphakia in adult patients. The lens is designed for implantation in the capsular bag.

CONTRA-INDICATIONS AND WARNINGS:
Physicians considering lens implantation in any of the following circumstances (but not limited to) must weigh the potential risk/benefit ratio: recurrent severe anterior or posterior segment inflammation or uveitis; patients in whom the IOL may affect the ability to observe, diagnose, or treat posterior segment diseases; surgical difficulties incorporating the potential for complications (such as but not limited to: persistent bleeding, significant iris damage, uncontrolled positive pressure, or significant vitreous prolapse or loss); distorted eye due to previous trauma or developmental defect in which appropriate support of the IOL is not possible; circumstances that would result in damage to the endothelium during implantation; patients in whom neither the posterior capsule nor zonule are intact enough to provide support; suspected microbial infection.
As with any surgical procedure, there is risk involved. Potential complications of cataract surgery may include, but are not limited to the following: inflammation (iridocyclitis, pupillary membrane, vitreous inflammation, CME, TASS ...), corneal endothelial damage, endophthalmitis, retinal detachment, corneal edema, pupillary block, iris prolapse, hypopyon, glaucoma, wound leak, hyphema, iris atrophy, vitreous prolapse, IOL decentration or tilt, IOL silicone adhesion, IOL optic deposits or opacities, and secondary surgical intervention (such as but not limited to wound leak repair, vitreous aspiration, iridectomy, IOL repositioning or replacement and retinal detachment repair).
The IOL must be implanted in accordance to the following instructions for use. Improper use may impose risk to the patient's health.
Do not use if product sterility or quality is thought to be compromised due to damaged packaging or signs of leakage.
Do not attempt to modify or alter the device or any of its components.
Do not use the lens after expiration date.
Do not reuse the lens and the preloaded system. Reuse may impose serious risk to the patient's health.
Do not resterilize as this can produce undesirable side effects.

PRECAUTIONS:
- Store at room temperature. Avoid temperatures below 5˚C and above 45˚C. Do not freeze.
- The IOL model, its power and expiration date should be verified before opening the protective packaging and before opening the individual sterile pouch.
- Use correct injector compatible.
- Sterility of the IOL and of the injector parts is guaranteed only if the individual sterile pouches have not been opened or damaged.
- IOLs must be carefully rinsed prior to implantation. Do not soak or rinse the IOL with any solution other than sterile balanced salt solution.
- Care should be taken to remove all viscoelastic from the anterior and posterior surfaces of the lens after implantation in the capsular bag.
- If a YAG laser posterior capsulotomy is performed, assure that the laser beam is focused slightly behind the posterior capsule.

PACKAGING / STERILIZATION:
The Preloaded Synthesis IOL is individually packaged in a pouch and a vial containing balanced salt solution that should be opened under sterile conditions. The Synthesis IOL is placed in a loading chamber, fixed by a lens holder, all immersed in BSS . A patient card and self-adhesive labels are supplied in the carton to provide traceability of the IOL. The Preloaded Synthesis IOL is steam sterilized.

DIRECTIONS FOR USE:
1. The physician should determine preoperatively the power of the lens to be implanted, using calculation methods. The recommended A-constants listed on the lens carton are guidelines only.
2. Prior to implanting, examine the lens package for model, power, and proper configuration.
3. Open the carton and remove the sterilized pouch containing the lens vial. Gradually peel the pouch apart to release the vial onto the sterile field. Inspect the vial. Make sure it is not damaged and the seal is not broken. Hold the vial in one hand. Grasp the pull-tab of the foil lid and peel the foil lid away from you while holding the vial in a horizontal position to expose the loading chamber.
Please refer to the enclosed figures to place the loading chamber into the compatible injector.
4. Remove the loading chamber containing the lens from the lens vial by pulling up on the upper loop of the lens holder. Do not remove the lens holder at this time.
5. Thoroughly rinse the loading chamber containing the lens with a sterile balanced salt solution, avoiding contact with gloves. Do not touch the lens.
6. Prior to inserting the loading chamber into the injector ensure that the plunger is in withdrawn position. Insert the loading chamber containing the lens into the opening of the compatible injector body until it locks into position (FIG. 1).
7. Rinse the lens with sterile balanced salt solution through the back of the loading chamber, holding the injector inclined to allow the flow of sterile balanced saline solution through the tip of the injector (FIG. 2).
8. Taking care not to touch the IOL, apply viscoelastic through the filling hole of the lens holder in the direction of the cartridge tip (FIG. 3) and at the end of the loading chamber (FIG. 4). Ensure that the viscoelastic fills the injector tip and migrates half way under the lens.
9. Push the plunger forward until the silicone cushion approaches the lens holder.
10. Remove the lens holder from the loading chamber by grasping the loop of the holder with two fingers and by flipping up the lower hinge of the lens holder with the thumb and lifting straight up (FIG. 5).
11. Check that the lens is positioned centrally in the loading chamber and close the wings of the loading chamber (FIG. 6). When the "click-lock" mechanism is engaged, the lens is securely in place. The system is ready for injection.
For detailed descriptions, refer to the instructions for use supplied with the compatible injector.
12. Press the injector plunger forward to push the lens. Implant the lens into the bag with the bevel of the injector tip facing down to the patient's eye. The anterior side of the lens is facing up towards the cornea when the orientation features are top right (A) and bottom left (B) (FIG. 7).
Only viscoelastic solution of low to medium viscosity should be used.
Only the injection system provided with the preloaded Synthesis lens should be used.
There are various surgical procedures that can be utilized, and the surgeon should select a procedure that is appropriate for the patient.

LENTILLE ASPHÉRIQUE PRÉCHARGÉE SANS ABERRATION

Modèles SIP et SIPY (jaune)

FR LENTILLE INTRAOCULAIRE

DESCRIPTION :
La lentille intraoculaire (LIO) Synthesis est une lentille intraoculaire monobloc de chambre postérieure filtrant les rayons ultraviolets (UV) et développée pour remplacer le cristallin naturel chez les patients pseudophakes adultes. La LIO Synthesis dispose d'une optique aspherique conçue pour être exempte de toute aberration sphérique. La lentille intraoculaire préchargée Synthesis est fournie avec un système d'implantation Accuject Pro afin d'offrir un mode d'implantation stérile, contrôlé et sans contact de la lentille dans le sac oculaire. La LIO préchargée Synthesis existe en deux modèles : SIP et SIPY. Reportez-vous à l'étiquette sur le carton pour connaître/vérifier le type de lentille.

CARACTÉRISTIQUES PHYSIQUES :

Matériau de la lentille / des haptiques	Modèle SIP : copolymère acrylique hydrophile pliable avec filtre UV. Modèle SIPY : copolymère acrylique hydrophile pliable avec filtre UV et chromophore filtrant la lumière bleue.
Caractéristiques du matériau	Indice de réfraction (humide à 20 ˚C) : 1.460 Indice de réfraction (dans l'œil à 35 ˚C) : 1.459
Transmission spectrale	Modèle SIP : transmission de 10 % à 365 nanomètres pour une LIO de +20,0 dioptries. Modèle SIPY : transmission de 10 % à 374 nanomètres pour une LIO de +20,0 dioptries. Voir **FIG.8** où la valeur X du graphique représente la longueur d'onde (nm) et la valeur Y, la transmittance (%).
Type d'optique	Aspherique sans aberration
Puissances	-10.0 à +40.0 dioptries
Dimensions	Diamètre du corps : 6 mm ; diamètre total : 10,5 à 11 mm sur la gamme dioptrique ; angulation : 0˚
Orientation de la lentille	Lors de sa mise en place, la surface antérieure de la lentille doit être orientée vers la face antérieure de l'œil. Comme l'illustre la FIG.7, lorsque les détrompeurs se trouvent en haut à droite (A) et en bas à gauche (B), vous observez la face antérieure de la lentille.

INDICATIONS :
La lentille de chambre postérieure Synthesis est indiquée dans l'implantation primaire destinée à la correction visuelle de l'aphakie chez les patients adultes. Elle est conçue pour être implantée dans le sac capsulaire.

CONTRE-INDICATIONS ET AVERTISSEMENTS :
Les médecins envisageant l'implantation de la lentille dans les conditions suivantes (mais sans s'y limiter) doivent évaluer le rapport bénéfices/risques : uvéite ou inflammation aiguë récurrente du segment antérieur ou postérieur ; patients chez lesquels la LIO risque d'altérer la capacité à observer, diagnostiquer ou traiter les maladies du segment postérieur ; difficultés chirurgicales augmentant les risques de complications (par exemple, mais sans s'y limiter : saignement persistant, lésion grave de l'iris, pression positive incontrôlée ou perte/prolapsus important du corps vitré) ; déformation oculaire due à un traumatisme précédent ou à un défaut de développement ne permettant pas le support adapté de la LIO; circonstances pouvant entraîner une lésion de l'endothélium lors de l'implantation ; patients chez lesquels ni la capsule postérieure, ni la zonule ne sont suffisamment en bon état pour le soutien adéquat de la lentille ; suspicion d'infection microbienne.
Toute procédure chirurgicale comporte des risques. Les complications potentielles de la chirurgie de la cataracte sont (sans s'y limiter) les suivantes : inflammation (iridocyclite, membrane pupillaire, hyalite, œdème maculaire cystoïde, syndrome toxique du segment antérieur, etc.), lésions endothéliales cornéennes, endophtalmie, décollement de rétine, œdème cornéen, bloc pupillaire, prolapsus iris, hypopion, glaucome, fuite de l'incision, hyphéma, atrophie de l'iris, prolapsus du corps vitré, décentrement ou inclinaison de la LIO, adhérence du silicone à la LIO, dépôts ou opacités sur l'optique de la LIO et intervention chirurgicale secondaire (par exemple, mais sans s'y limiter, réparation de la fuite de l'incision, vitrectomie, iridectomie, repositionnement ou remplacement de la LIO et réparation du décollement de la rétine).
La LIO doit être implantée conformément aux instructions suivantes. Toute utilisation inadaptée peut entraîner des risques pour la santé du patient.
Ne pas utiliser ce produit si son emballage est abîmé ou si vous constatez des traces de fuite, et que vous soupçonnez une altération de sa stérilité ou de sa qualité.
Ne pas essayer de modifier ou d'altérer le dispositif ou l'un de ses composants.
Ne pas utiliser la lentille après sa date d'expiration.
Ne pas réutiliser la lentille et le système préchargé. Toute réutilisation peut entraîner des risques importants pour la santé du patient.
Ne pas restériliser sous peine d'effets secondaires indésirables.

PRÉCAUTIONS :
- Entreposer à température ambiante. Ne pas conserver à des températures inférieures à 5 ˚C et supérieures à 45 ˚C. Ne pas congeler le produit.
- Vérifier le modèle de LIO, la puissance et la date d'expiration avant l'ouverture de l'emballage de protection et de l'enveloppe stérile.
- Utiliser un injecteur approprié et compatible.
- La stérilité de la LIO et des pièces de l'injecteur n'est garantie que si l'enveloppe stérile individuelle n'a pas été ouverte ou endommagée.
- Rincer soigneusement les LIO avant toute implantation. Utiliser uniquement une solution saline équilibrée stérile pour rincer ou faire tremper la LIO.
- Retirer toute trace de viscoélastique des surfaces antérieure et postérieure de la lentille après implantation dans le sac capsulaire.
- En cas de capsulotomie postérieure au laser YAG, s'assurer que le faisceau de laser est focalisé légèrement en arrière de la capsule postérieure.

CONDITIONNEMENT / STÉRILISATION :
Les LIO préchargées Synthesis sont conditionnées individuellement dans une enveloppe et dans un flacon contenant une solution saline équilibrée qui ne doivent être ouverts que dans des conditions stériles. La LIO Synthesis est placée dans une chambre de chargement, fixée par une goupille, puis immergée dans une solution saline équilibrée stérile. Une carte patient et des étiquettes adhésives sont fournies dans le carton pour garantir la traçabilité de la LIO. La LIO préchargée Synthesis est stérilisée à la vapeur.

MODE D'EMPLOI :
1. Avant l'opération, déterminez par différentes méthodes de calcul la puissance de la lentille à implanter. Les constantes A recommandées et indiquées sur l'emballage de la lentille sont uniquement données à titre indicatif.
2. Avant l'implantation, examinez l'emballage pour vérifier le modèle de la lentille, la puissance et son aspect général.
3. Ouvrez le carton et retirez l'enveloppe contenant la lentille du flacon de la lentille. Ouvrez lentement l'enveloppe pour libérer le flacon sur le champ stérile. Inspectez le flacon. Assurez-vous qu'il n'est pas endommagé et que le scellage est intègre. Tenez le flacon d'une main. Tirez l'opercule dans la direction contraire à la vôtre tout en maintenant le flacon en position horizontale pour exposer la chambre de chargement. Veuillez vous reporter aux figures ci-jointes afin de placer la chambre de chargement dans l'injecteur compatible.
4. Retirez la chambre de chargement contenant la lentille du flacon en tirant sur la partie supérieure de la goupille sans la désolidariser de la chambre de chargement.
5. Rincer abondamment la chambre de chargement contenant l'implant avec une solution saline équilibrée stérile, en évitant tout contact avec les gants. Ne pas toucher l'implant.
6. Avant d'insérer la chambre de chargement dans l'injecteur, assurez-vous que le piston se trouve en position arrière. Insérez la chambre de chargement contenant la lentille dans l'ouverture du corps de l'injecteur compatible jusqu'à ce qu'elle se verrouille sur sa position (FIG. 1).
7. Rincez l'implant par l'arrière de la chambre de chargement avec une solution saline équilibrée stérile en maintenant l'injecteur incliné pour permettre l'écoulement de la solution saline équilibrée stérile par la pointe de l'injecteur (FIG. 2).
8. En veillant à ne pas toucher la LIO, appliquez la solution viscoélastique par l'orifice de remplissage de la goupille en direction de l'extrémité de la cartouche (FIG. 3) et par l'arrière de la chambre de chargement (FIG. 4). Assurez-vous que la solution viscoélastique remplisse la pointe de l'injecteur et qu'elle migre à mi-chemin sous la lentille.
9. Poussez sur le piston jusqu'à ce que l'embout en silicone s'approche de la goupille.
10. Retirez la goupille de la chambre de chargement en saisissant l'armature de la goupille avec deux doigts et en basculant vers le haut la charnière inférieure de la goupille avec le pouce et en la soulevant à la verticale (FIG. 5).
11. Vérifiez que la lentille se trouve au centre de la chambre de chargement et fermez les ailettes de la chambre de chargement (FIG. 6). Lorsque le mécanisme de verrouillage par encliquetage s'enclenche, la lentille est bien en place. Le système est prêt pour l'injection.
Pour des descriptions détaillées, veuillez vous reporter aux instructions d'utilisation fournies avec l'injecteur compatible.
12. Appuyez sur le piston de l'injecteur pour pousser la lentille. Implantez la lentille en veillant à ce que le biseau de la pointe de l'injecteur soit orienté vers le bas, face à l'œil du patient. La face antérieure de la lentille est orientée vers le haut, face à la cornée lorsque les détrompeurs se trouvent en haut à droite (A) et en bas à gauche (B) (FIG. 7).
Seules les solutions viscoélastiques de viscosité faible à moyenne doivent être utilisées.
Seul le système d'injection fourni avec la lentille préchargée Synthesis doit être utilisé.
Différentes procédures chirurgicales peuvent être utilisées, il revient au chirurgien de sélectionner une procédure adaptée au patient.

Synthesis Preloaded

VORGELADENE ABERRATIONSFREIE ASPHÄRISCHE LINSE

Modelle SIP und SIPY (gelb)

DE INTRAOKULARLINSE

BESCHREIBUNG:
Die Synthesis Intraokularlinse (IOL) ist eine einteilige Hinterkammerlinse mit Filter für ultraviolettes (UV) Licht, die als Ersatz der natürlichen Augenlinse bei pseudophaken erwachsenen Patienten eingesetzt wird. Die Synthesis IOL ist mit einer asphärischen Optik ausgestattet, sodass keine sphärischen Aberrationen auftreten. Die vorgeladene Synthesis IOL wird mit einem Accuject Pro Einführsystem ausgeliefert, um eine sterile, kontrollierte und berührungsfreie Einbringung der Linse in den Kapselsack. Die Synthesis Preloaded IOL gibt es in zwei verschiedenen Modellen - Modell SIP oder SIPY. Auf dem Kartonbehälter ist die Art der Linse angegeben.

PHYSIKALISCHE EIGENSCHAFTEN:

Linse/ Haptik-Material	Modell SIP: Faltbares hydrophiles Acrylcopolymer mit UV-Filter. Modell SIPY: Faltbares hydrophiles Acrylcopolymer mit UV-Filter und Blaulichtfilter-Chromophor.
Materialeigenschaften	Brechungsindex in nassem Zustand bei 20 ˚C: 1.460 Brechungsindex im Auge bei 35 ˚C: 1.459
Spektrale Transmission	Modell SIP: 10 % Transmission bei 365 Nanometer für IOL mit +20,0 Dioptrien. Modell SIPY: 10 % Transmission bei 374 Nanometer für IOL mit +20,0 Dioptrien. Siehe Abb. 8, wobei die X-Achse die Wellenlänge (nm) und die Y-Achse die Transmission (%) zeigt.
Art der Optik	Asphärisch aberrationsfrei
Stärken	-10.0 bis +40.0 Dioptrien
Abmessungen	Durchmesser der Optik: 6,0 mm; Gesamtdurchmesser: 10,5 mm bis 11 mm über den Dioptriebereich hinweg; Abwinklung der Haptik: 0˚
Ausrichtung der Linse	Die Vorderseite der Linse wird nach oben in Richtung der anterioren Seite des Auges implantiert. Wenn sich die Ausrichtungsmarkierungen oben rechts (A) und unten links (B) befinden (wie in Abb. 7 dargestellt), zeigt die Vorderseite der Linse nach oben.

ANWENDUNGSGEBIETE:
Die Synthesis Hinterkammerlinse ist für die primäre Implantation zur optischen Korrektur einer Aphakie bei erwachsenen Patienten indiziert. Die Linse wird im Kapselsack implantiert.

GEGENANZEIGEN UND WARNHINWEISE
Wenn ein Arzt die Linsenimplantation unter einem der folgenden Umstände in Betracht zieht (wobei diese Liste nicht vollständig ist), muss das anzuerkennende Risiko-Nutzen-Verhältnis abgewogen werden: rezidivierende schwere Entzündung oder Uveitis des vorderen oder hinteren Segments, Patienten, bei denen die IOL die Möglichkeit zur Beobachtung, Diagnose oder Behandlung von Erkrankungen des hinteren Segments beeinträchtigt, chirurgische Probleme, die das Komplikationspotenzial vergrößern (u. a. anhaltende Blutung, signifikanter Irisschaden, unkontrollierter Überdruck oder deutlicher Glaskörperprolaps oder Glaskörperverlust), deformiertes Auge durch vorheriges Trauma oder durch Entwicklungsstörung, weswegen kein ausreichender Halt der IOL gewährleistet ist, Umstände, die während der Implantation zu Schäden im Endothel führen würden, Patienten, bei denen weder die hintere Kapsel noch die Zonulafasern ausreichend intakt sind, um Halt zu geben, Verdacht auf mikrobielle Infektion.
Wie bei jedem chirurgischen Eingriff besteht ein Risiko. Zu den potenziellen Komplikationen einer Kataraktoperation gehören u. a. Entzündung (Iridozyklitis, Membrana pupillaris, Glaskörperentzündung, CME, TASS ...), Beschädigung des Hornhautendothels, Endophthalmitis, Netzhautablösung, Hornhautödem, Pupillarblock, Irisprolaps, Hypopyon, Glaukom, Wundausfluss, Hyphäma, Irisatrophie, Glaskörperprolaps, Dezentrierung oder Verrutschen der IOL, Silikonadhäsion der IOL, optische Ablagerungen oder Schlieren auf der IOL und sekundäre chirurgische Eingriffe (u. a. Stoppen von Wundausfluss, Glaskörperaspiration, Iridektomie, Neupositionierung oder Austausch der IOL und Behandlung einer Netzhautablösung).
Die IOL muss unter Beachtung der nachfolgenden Gebrauchsanleitung implantiert werden. Die nicht ordnungsgemäße Anwendung kann die Gesundheit des Patienten beeinträchtigen.
Das Produkt nicht verwenden, wenn seine Sterilität oder Qualität aufgrund von Verpackungsbeschädigungen oder Anzeichen einer Leckage beeinträchtigt sein könnte.
Das Produkt oder seine Komponenten dürfen nicht modifiziert oder verändert werden.
Keine Linsen verwenden, deren Verfalldatum abgelaufen ist.
Die Linse und das vorgeladene System dürfen nicht wiederverwendet werden. Die Wiederverwendung kann die Gesundheit des Patienten schwer beeinträchtigen.
Nicht erneut sterilisieren, da dies zu Nebenwirkungen führen kann.

VORSICHTSMASSNAHMEN:
- Bei Raumtemperatur lagern. Temperaturen unter 5 ˚C und über 45 ˚C vermeiden. Nicht einfrieren.
- Das IOL-Modell, die Stärke und das Verfalldatum müssen vor dem Öffnen der Schutzverpackung und vor dem Öffnen jedes einzelnen Sterilbeutels überprüft werden.
- Es muss ein kompatibler Injektor verwendet werden.
- Die Sterilität der IOL und des Injektorsystems sind nur gewährleistet, wenn die einzelnen Sterilbeutel nicht geöffnet oder beschädigt wurden.
- Die IOL muss vor der Implantation sorgfältig gespült werden. Die IOL darf nur mit einer sterilen physiologischen Kochsalzlösung gespült oder darin eingelegt werden.
- Es ist darauf zu achten, dass nach der Implantation in den Kapselsack jegliches viskoelastische Material von der Vorder- und Rückseite der Linse entfernt wird.
- Wenn eine hintere Kapsulotomie mit YAG-Laser durchgeführt wird, muss mit dem Laser etwas hinter die hintere Kapsel gezielt werden.

VERPACKUNG/STERILISATION:
Jede einzelne Synthesis Preloaded IOL befindet sich in einem Behälter mit physiologischer Kochsalzlösung, der in einen Beutel verpackt ist und unter sterilen Bedingungen geöffnet werden muss. Die Synthesis IOL steckt in der ebenfalls mit physiologischer Kochsalzlösung gefüllten Ladekammer, die durch einen Linsenhalter fixiert ist. In dem Karton befinden sich außerdem ein Patientenausweis und einige Aufkleber zur Nachverfolgung der IOL. Die Synthesis Preloaded IOL wurde mit Dampf sterilisiert.

GEBRAUCHSANLEITUNG:
1. Der Arzt muss die Stärke der zu implantierenden Linse präoperativ mit Berechnungsmethoden bestimmen. Die auf dem Karton der Linse aufgedruckten A-Konstanten verstehen sich nur als Empfehlung.
2. Vor der Implantation auf der Linsenverpackung prüfen, ob es sich um das richtige Modell in der richtigen Stärke mit der gewünschten Konfiguration handelt.
3. Den Karton öffnen und den sterilen Beutel mit dem Behälter herausnehmen. Den Beutel teilweise aufreißen und den Behälter auf dem Sterilfeld ablegen. Behälter inspizieren. Er darf nicht beschädigt sein und das Siegel darf nicht gebrochen sein. Den Behälter in einer Hand halten. Den Behälter waagerecht festhalten, die Lasche für die Schutzfolie anfassen und die Schutzfolie abziehen. Jetzt ist die Ladekammer sichtbar.
Bitte beziehen Sie sich auf die beigefügten Abbildungen, um die Ladekammer in den kompatiblen Injektor einzusetzen ist.
4. Die Ladekammer mit der Linse am oberen Ring des Linsenhalters anfassen und aus dem Behälter ziehen. Den Linsenhalter noch nicht von der Kammer nehmen.
5. Die die Linse enthaltende Ladekammer sorgfältig mit einer sterilen, physiologischen Kochsalzlösung spülen und dabei jede Berührung mit Handschuhen vermeiden. Die Linse nicht berühren.
6. Vor dem Einsetzen der Ladekammer in den Injektor darauf achten, dass der Kolben ganz zurückgezogen ist. Die Ladekammer mit der Linse in die Öffnung des kompatiblen Injektors setzen, bis sie einrastet (Abb. 1).
7. Die Linse durch die Rückseite der Ladekammer mit einer sterilen, physiologischen Kochsalzlösung spülen und dabei den Injektor geneigt halten, damit die sterile, physiologische Kochsalzlösung durch die Spitze des Injektors fließen kann (ABB. 2).
8. Darauf achten, die IOL nicht zu berühren. Viskoelastisches Material durch das Einfüllloch im Linsenhalter in Richtung Spitze (Abb. 3) und am Ende der Ladekammer injizieren (Abb. 4). Dafür sorgen, dass das viskoelastische Material die Injektorspitze ausfüllt und sich bis halb unter die Linse verteilt.
9. Den Kolben vorschieben, bis das Silikonkissen den Linsenhalter erreicht.
10. Den Linsenhalter von der Ladekammer entfernen. Dafür den Ring des Linsenhalters mit zwei Fingern anfassen, das untere Scharnier des Linsenhalters mit dem Daumen nach oben drücken und den Halter gerade nach oben herausziehen (Abb. 5).
11. Sicherstellen, dass die Linse in der Mitte der Ladekammer liegt und die Flügel der Ladekammer schließen (Abb. 6). Wenn der Schnappmechanismus einrastet, befindet sich die Linse am richtigen Platz und ist gesichert. Das System ist jetzt bereit für die Injektion.
Eine genaue Beschreibung ist Bestandteil der Gebrauchsanleitung für das kompatible Injektorsystem.
12. Den Kolben des Injektors hineindrücken, um die Linse vorzuschieben. Die Linse mit nach unten gerichteter Abschrägung der Injektorspitze in das Patientenauge implantieren. Die Vorderseite der Linse zeigt nach oben zur Hornhaut, wenn sich die Ausrichtungsmarkierungen oben rechts (A) und unten links (B) befinden (Abb. 7).
Es sollten nur Viskosestika niedriger bis mittlerer Viskosität verwendet werden.
Es darf nur das mit der vorgeladenen Synthesis-Linse gelieferte Injektionssystem verwendet werden.
Für die Implantation kommen verschiedene Operationstechniken infrage und der Operateur muss das für den Patienten geeignete Verfahren wählen.

Synthesis Preloaded

LENTES ASFÉRICAS SIN ABERRACIÓN PRECARGADAS

Modelos SIP y SIPY (amarillo)

ES LENTES INTRAOCULARES

DESCRIPCIÓN:
La lente intraocular (LIO) Synthesis es una LIO de cámara posterior, de una sola pieza, que absorbe los rayos ultravioleta (UV) desarrollada para reemplazar el cristalino natural en pacientes adultos pseudofáquicos. La LIO Synthesis tiene una óptica asférica diseñada para estar libre de aberración esférica. La lente Synthesis intraocular precargada se suministra con un Sistema de Colocación Accuject Pro para proporcionar un método de colocación estéril, controlado y sin contacto de la lente en el saco ocular. La LIO Synthesis Precargada se suministra en 2 modelos diferentes, los modelos SIP o SIPY. Consultar la etiqueta en la caja de cartón para ver el tipo de lente.

CARACTERÍSTICAS FÍSICAS:

Material del háptico/lente	Modelo SIP: Copolímero acrílico hidrófilo plegable con un agente de absorción de UV. Modelo SIPY: Copolímero acrílico hidrófilo plegable con un agente de absorción de UV y un cromóforo que filtra la luz azul.
Características del material	Índice de refracción cuando está húmedo a 20 ˚C: 1.460 Índice de refracción cuando está en el ojo a 35 ˚C: 1.459
Transmisión espectral	Modelo SIP: Transmisión del 10 % a 365 nanómetros para la LIO de +20,0 dioptrias. Modelo SIPY: Transmisión del 10 % a 374 nanómetros para la LIO de +20,0 dioptrias. Consulte la FIG.8 con una gráfica donde el valor X = longitud de onda (nm) y el valor Y = transmisión (%)
Tipo de óptica	Asférica sin aberración
Potencias	De -10.0 a +40.0 dioptrias
Dimensiones	Diámetro del cuerpo: 6,0 mm; diámetro total: 10,5 mm a 11 mm en el intervalo de dioptrías; ángulo háptico: 0˚
Orientación de la lente	El lado anterior de la lente está orientado hacia el lado anterior del ojo. Tal como se ilustra en la FIG.7, cuando los elementos de orientación estén en la parte superior derecha (A) y en la parte inferior izquierda (B), usted está mirando hacia el lado anterior de la lente.

INDICACIONES:
La lente de cámara posterior Synthesis está indicada para la implantación primaria en la corrección visual de la afaquia en pacientes adultos. La lente está diseñada para su implantación en el saco capsular.

CONTRAINDICACIONES Y ADVERTENCIAS:
Los médicos que estén considerando la implantación de una lente en cualquiera de las siguientes circunstancias (entre otras) deberán evaluar la posible relación riesgo/beneficio: uveítis o inflamación recurrente intensa del segmento anterior o posterior; pacientes en los que la LIO pueda afectar a la capacidad de observar, diagnosticar o tratar enfermedades del segmento posterior; dificultades quirúrgicas que puedan aumentar el riesgo de sufrir complicaciones (como, entre otras: hemorragia persistente, daño significativo del iris, presión positiva incontrolada o pérdida o prolapso vítreo significativo); distorsión del ojo debido a un traumatismo previo o defecto del desarrollo en el que no se disponga de un soporte adecuado para la LIO; circunstancias que puedan provocar daños en el endotelio durante la implantación; pacientes en los que ni la cápsula posterior ni la zónula estén lo suficientemente intactas como para proporcionar apoyo; sospecha de infección microbiana.
Al igual que con cualquier intervención quirúrgica, existen riesgos. Las posibles complicaciones asociadas a la cirugía de cataratas incluyen, entre otras, las siguientes: inflamación (iridociclitis, membrana pupilar, inflamación vítrea, CME, TASS, etc.), daños endoteliales de la córnea, endoftalmitis, desprendimiento de retina, edema corneal, bloqueo pupilar, prolapso del iris, hipopión, glaucoma, derrame en la herida, hiphema, atrofia del iris, prolapso vítreo, inclinación o descentración de la LIO, adhesión de la silicona de la LIO, opacidades o depósitos ópticos de la LIO e intervención quirúrgica secundaria (como, entre otros, reparación del derrame en la herida, aspiración vítrea, iridectomía, reposicionamiento o reemplazo de la LIO y reparación del desprendimiento de retina).
La LIO debe implantarse conforme a las siguientes instrucciones de uso. Un uso inadecuado puede suponer un riesgo para la salud del paciente.
No usar el producto si se cree que la esterilidad o la calidad pueden verse afectadas debido a daños en el embalaje o a signos de fuga.
No modificar ni alterar el dispositivo ni ninguno de sus componentes.
No usar la lente después de la fecha de caducidad.
No reutilizar la lente ni el sistema precargado. Su reutilización puede suponer un riesgo grave para la salud del paciente.
No resterilizar puesto que ello puede provocar efectos secundarios no deseados.

PRECAUCIONES:
- Conservar a temperatura ambiente. Evitar temperaturas inferiores a 5 ˚C y superiores a 45 ˚C. No congelar.
- El modelo de la LIO, su potencia y la fecha de caducidad se deben verificar antes de abrir el embalaje protector y antes de abrir la bolsa estéril individual.
- Usar un inyector compatible adecuado.
- La esterilidad de la LIO y de las piezas del inyector solo está garantizada si las bolsas estériles individuales no se han abierto o no están dañadas.
- Las LIO se deben enjuagar cuidadosamente antes de la implantación. No mojar ni enjuagar la LIO salvo que sea con una solución salina equilibrada estéril.
- Se debe tener cuidado de eliminar todo el material viscoelástico de las superficies anterior y posterior de la lente después de la implantación en el saco capsular.
- Si se realiza una capsulotomía posterior con láser YAG, comprobar que el haz del láser esté centrado ligeramente por detrás de la cápsula posterior.

EMBALAJE/ESTERILIZACIÓN:
La LIO Synthesis Precargada se envasa individualmente dentro de una bolsa y un vial que contiene una solución salina equilibrada que debe abrirse en condiciones de esterilidad. La LIO Synthesis está colocada en una cámara de carga, fijada por un portalentes, todo sumergido en SSB. En la caja, se suministra una tarjeta para el paciente y etiquetas autoadhesivas para proporcionar trazabilidad a la LIO. La LIO Synthesis Precargada se esteriliza por vapor.

INSTRUCCIONES DE USO:
1. El médico debe determinar antes de la intervención la potencia de la lente que se va a implantar usando métodos de cálculo. Las constantes A recomendadas en la caja de la lente son solo una guía.
2. Antes de efectuar la implantación, examine el envase de la lente para comprobar que el modelo, la potencia y la configuración sean adecuadas.
3. Abra la caja y extraiga la bolsa esterilizada que contiene el vial de la lente. Abra poco a poco la bolsa para extraer el vial en el campo estéril. Inspeccione el vial. Compruebe que no esté dañado y que el precinto no esté roto. Sujete el vial con una mano. Coja la lengüeta de la tapa de aluminio y despéguela mientras sujeta el vial en posición horizontal para dejar la cámara de carga al descubierto.
Consulte las figuras adjuntas para colocar la cámara de carga dentro del inyector compatible.
4. Saque la cámara de carga que contiene la lente del vial de la lente tirando hacia arriba de la presilla superior del portalentes. No saque el portalentes en este momento.
5. Aclare bien la cámara de carga que contiene la lente con una solución de sal equilibrada y estéril, evitando el contacto con los guantes. No toque la lente.
6. Antes de insertar la cámara de carga en el inyector, compruebe que el émbolo esté en posición de extracción. Inserte la cámara de carga que contiene la lente en la abertura del cuerpo del inyector compatible hasta que quede fijada en posición (FIG. 1).
7. Aclare la lente con una solución de sal equilibrada y estéril por la parte posterior de la cámara de carga, sujetando el inyector inclinado para que el flujo de solución salina equilibrada y estéril pase por la punta del inyector (FIG. 2).
8. Con cuidado de no tocar la LIO, aplique material viscoelástico a través del orificio de llenado del portalentes en la dirección de la punta del cartucho (FIG. 3) y al final de la cámara de carga (FIG. 4). Asegúrese de que el material viscoelástico llene la punta del inyector y emigre a medio camino debajo de la lente.
9. Empuje el émbolo hacia adelante hasta que el cojín de silicona se aproxime al portalentes.
10. Retire el portalentes de la cámara de carga agarrando la presilla del portalentes con dos dedos y volteando hacia arriba la bisagra inferior del portalentes con el pulgar y levantándolo recto hacia arriba (FIG. 5).
11. Compruebe que la lente esté colocada en el centro de la cámara de carga y cierre las alas de la cámara (FIG. 6). Cuando el mecanismo de bloqueo esté acoplado, la lente está bien fijada en su sitio. El sistema está listo para la inyección.
Para obtener descripciones detalladas, consulte el manual de instrucciones que se facilita con el inyector compatible.
12. Apriete el émbolo del inyector hacia adelante para empujar la lente. Implante la lente con el bisel de la punta del inyector orientada hacia abajo al ojo del paciente. El lado anterior de la lente está orientado hacia la córnea cuando los elementos de orientación están en la parte superior derecha (A) y en la parte inferior izquierda (B) (FIG. 7).
Solo debe utilizarse solución viscoelástica de viscosidad baja a media.
Solo debe utilizarse el sistema de inyección suministrado con la lente Synthesis precargada.
Existen varios procedimientos quirúrgicos que pueden utilizarse, y el cirujano deberá elegir un procedimiento que sea adecuado para el pa

Оптическая сила	От -10,0 до +40,0 диптр
Размеры	Диаметр оптического тела: 6,0 мм; общий диаметр: от 10,5 до 11 мм в диоптрическом диапазоне; Гаптический угол: 0°
Ориентация линзы	Передняя сторона линзы обращена к передней стороне глаза. Как показано на рис. 7, когда ориентационные элементы расположены вверху справа (A) и внизу слева (B) передняя сторона линзы обращена к наблюдателю.

ПОКАЗАНИЯ

Заднекамерная линза фирмы Synthesis показана для первичной имплантации с целью коррекции зрения у взрослых пациентов при афакии. Линза предназначена для имплантации в капсулярный мешок.

ПРОТИВОПОКАЗАНИЯ И ПРЕДОСТЕРЕЖЕНИЯ

С врачебной точки зрения, при любом из следующих обстоятельств (но не ограничиваясь этим) следует оценивать соотношение потенциальных рисков и преимуществ: рецидивирующее тяжелое воспаление переднего или заднего сегмента или увеит; пациенты, у которых ИОЛ может повлиять на способность наблюдать, диагностировать или лечить заболевания заднего сегмента; хирургические трудности с повышением потенциала для осложнений (таких как постоянное кровотечение, существенное повреждение радужной оболочки, неконтролируемое положительное давление или существенный пролапс или потеря стекловидного тела и др..); деформация глаза вследствие предшествовавшей травмы или дефекта развития, в результате которых надлежащая фиксация ИОЛ становится невозможной; обстоятельства, которые могут привести к повреждению эндотелия в процессе имплантации; пациенты, у которых ни задняя камера, ни поясок недостаточно целы для обеспечения фиксации; подозрение на микробную инфекцию.

Как и при любом хирургическом вмешательстве, имеет место риск. Потенциальные осложнения хирургического лечения катаракты могут включать, но не ограничиваться следующим: воспаление (иридоциклит, зрачковая мембрана. воспаление стекловидного тела, цистоидный макулярный отек,тоскичный синдром переднего сегмента…), корнеальное повреждение эндотелия, эндофтальмит, отслоение сетчатки, отёк роговицы, закупорка зрачка, пролапс радужной оболочки, гипопион, глаукома, просачивание рины, гифема, атрофия радужной оболочки, пролапс стекловидного тела, смещение или наклон ИОЛ, адгезия склеиоиа ИОЛ, оптические нарёпы или помутнения и вторичные хирургические вмешательства (такие как устранение просачивания рины, аспирация стекловидного тела, иридэктомия, переустановка или замена ИОЛ, репарация отслоения сетчатки и др.).

ИОЛ следует имплантировать в соответствии со следующими указаниями. Ненадлежащее использование может угрожать здоровью пациента.

Не используйте ИОЛ, стерильность или качество которой находятся под сомнением в результате повреждения упаковки или признаков хлечки.

Не пытайтесь видоизменить или переделывать устройство или его компоненты.

Не используйте линзу после истечения срока годности.

Не используйте линзу и встроенную систему повторно. Повторное использование может угрожать здоровью пациента.

Не стерилизуйте ИОЛ повторно, поскольку это может привести к нежелательным побочным эффектам.

МЕРЫ ПРЕДОСТОРОЖНОСТИ

- Хранить при комнатной температуре. Избегать хранения при температуре ниже 5 °C и выше 45°C. Не допускать замораживания.
- Перед вскрытием защитной упаковки и индивидуального стерильного пакета следует проверить модель ИОЛ, её оптическую силу и срок годности.
- Использовать соответствующий совместимый инжектор.
- Стерильность ИОЛ и частей инжектора гарантируется, только если индивидуальные стерильные пакеты не были вскрыты или повреждены.
- Перед имплантацией ИОЛ следует тщательно промыть. Не замачивать и не промывать ИОЛ в каких-либо других растворах, кроме стерильного сбалансированного солевого раствора.
- При удалении вискоэластика с передней и задней поверхностей линзы после имплантации в капсулярный мешок следует соблюдать осторожность.
- В случае проведения задней капсулотомии с помощью лазера на иттрий-алюминиевом гранате (YAG-лазера), необходимо обеспечить фокусировку луча лазера несколько позади задней капсулы.

УПАКОВКА И СТЕРИЛИЗАЦИЯ

ИОЛ фирмы Synthesis упакована в индивидуальный пакет и во флакон со сбалансированным солевым раствором, вскрытие которых следует выполнять в стерильных условиях. ИОЛ помещена в загрузочную камеру, зафиксированную держателем линзы, и погруженную вместе с ним в основной соляной раствор. Для обеспечения отслеживаемости ИОЛ картонная коробка снабжена карточкой пациента и самоклеющимися этикетками. Предварительно загруженная ИОЛ фирмы Synthesis стерилизована паром.

УКАЗАНИЯ ПО ИСПОЛЬЗОВАНИЮ

1. Перед хирургическим вмешательством врач должен определить оптическую силу линзы, подлежащей имплантации, методом вычисления. Рекомендованные значения постоянных A, указанные на картонной коробке с линзой, являются только ориентировочными.
2. Перед имплантацией следует осмотреть упаковку ИОЛ и выяснить её модель, оптическую силу и надлежащую конфигурацию.
3. Откройте картонную коробку и извлеките стерилизованный пакет, содержащий флакон с линзой. Постепенно снимите пакет, чтобы флакон остался в стерильной среде. Осмотрите флакон. Убедитесь в том, что он не поврежден и не вскрыт. Удерживайте флакон в одной руке. Захватите язычок и потяните крышку из фольги от себя, удерживая флакон в горизонтальном положении, чтобы открыть загрузочную камеру.
   Расположение загрузочной камеры в совместимом инжекторе показано на прилагаемых рисунках.
4. Извлеките загрузочную камеру, содержащую линзу, из флакона, потянув за верхнюю петлю держателя линзы. При этом не извлекайте держатель линзы.
5. Тщательно промойте загрузочную камеру, содержащую линзу, стерильным сбалансированным солевым раствором, избегая контакта с перчатками. Не касайтесь линз.
6. Перед введением загрузочной камеры в инжектор убедитесь в том, что поршень находится в отведенном положении. Введите загрузочную камеру, содержащую линзу, в отверстие корпуса совместимого инжектора до фиксации в целевом положении (рис. 1).
7. Промойте линзу стерильным сбалансированным солевым раствором через заднюю часть загрузочной камеры, удерживая инжектор наклоненным, чтобы обеспечить поток стерильного сбалансированного солевого раствора через наконечник инжектора (рис. 2).
8. Осторожно, не касаясь ИОЛ, введите вискоэластик через наполнительное отверстие держателя линзы в направлении наконечника картриджа (рис. 3) и на конце загрузочной камеры (рис. 4). Обеспечьте заполнение наконечника инжектора вискоэластиком и его продвижение на половину расстояния под линзой.
9. Нажимайте на поршень до тех пор, пока силиконовая подушка не достигнет держателя линзы.
10. Извлеките держатель линзы из загрузочной камеры, захватив петлю держателя двумя пальцами, и переверните нижний шарнир держателя линзы большим пальцем, просто подняв его (рис. 5).
11. Убедитесь в том, что линза расположена по центру загрузочной камеры, и закройте ее створки (рис. 6). При срабатывании механизма фиксации с защелкой линза надёжно фиксируется на месте. Система готова для инжекции.
   Подробное описание содержится в инструкции по эксплуатации, поставленной вместе с совместимым инжектором.
12. Прикрыть пошевн инжектора к линзе до упора. Введите линзу с наклоном наконечника инжектора, обращенным к глазу пациента. Передняя сторона линзы обращена к роговице, если ориентационные элементы расположены справа вверху (A) и слева внизу (B) (рис. 7).
   Следует использовать только раствор вискоэластика низкой или средней вязкости.
   Следует использовать только инъекционную систему, предоставленную вместе с предварительно загруженной линзой Synthesis.
   Возможно проведение различных хирургических вмешательств, и инжектор должен выбрать процедуру, подходящую для пациента.

EC Certificate

Directive 93/42/EEC Annex II, excluding Section 4
Full Quality Assurance System
Medical Devices

Registration No.: HD 60148953 0001

Report No.: 21250656 021

Manufacturer:
Cutting Edge SAS
770, Rue Alfred Nobel, Immeuble le Nobel
34000 Montpellier
France

Products:
Intraocular lenses

(see attachment for additional sites included)

Replaces Certificate, Registration No.: HD 60116293 0001

Expiry Date: 2024-05-26

The Notified Body hereby declares that the requirements of Annex II, excluding section 4 of the directive 93/42/EEC have been met for the listed products. The above named manufacturer has established and applies a quality assurance system, which is subject to periodic surveillance, defined by Annex II, section 5 of the aforementioned directive. For placing on the market of class III devices covered by this certificate an EC design-examination certificate according to Annex II, section 4 is required.

Effective Date: 2020-04-24

EC DECLARATION OF CONFORMITY ACCORDING TO DIRECTIVE 93/42/EEC

This declaration is issued under the sole responsibility of Cutting Edge S.A.S. as manufacturer of the mentioned products.

DEVICES CATEGORY	Posterior-chamber intraocular lenses, pseudophakic
GMDN CODE	35658
PRODUCTS	Synthesis models: SISA, SISAY, SIP, SIPY
CLASS	IIb, Rule 8, according to Directive 93/42/EEC Annex IX
MANUFACTURER	Cutting Edge S.A.S. Immeuble Le Nobel 770 rue Alfred Nobel 34000 Montpellier France

Above products are developed and manufactured in compliance with Council Directive 93/42/EEC of 14 June 1993 concerning Medical Devices as amended by Directive 2007/47/EC of the European Parliament and of the Council of 5 September 2007 and the applicable European harmonized standards.

NOTIFIED BODY	TÜV Rheinland LGA Products GmbH Tillystraße 2 90431 Nürnberg Germany
	Notified Body number: 0197
QUALITY SYSTEM CERTIFICATE	EN ISO 13485:2016 "Design and development, manufacture and distribution of acrylic intraocular lenses and distribution of intraocular lenses and ophthalmic surgical devices." Number: SX 60146578 0001 Expires on : 2022-12-07
EC CERTIFICATE	Number: HD 60148953 0001 Expires on: 2024-05-26
DECLARATION REVISION INDEX	F

We hereby declare the conformity of the above mentioned products with the Council Directive 93/42/EEC of 14 June 1993 concerning Medical Devices as amended by Directive 2007/47/EC of the European Parliament and of the Council of 5 September 2007, Annex II "Full quality assurance system", excluding section 4.

This Declaration of Conformity expires on: 2022-12-07

Date and Signature 02 JUIL. 2020
