

CAMEL HAIR BRUSH

This general purpose brush is made of high-quality camel hair. The fine quality of the bristles permits dusting of target objects with a very fine coat of either fluorescent invisible or visible detection powder. Length: 18,5 cm

Carbon fiber brush

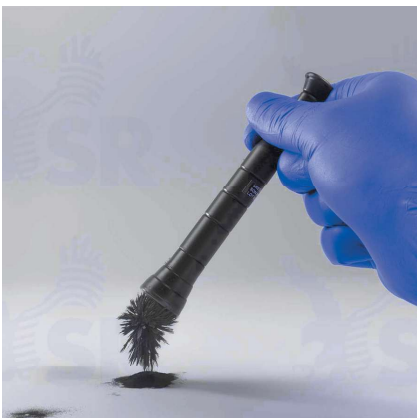

Carbon filament latent print brushes feature the latest in latent print development technology. Carbon fibre brushes are unique because carbon fibres are naturally smooth and have a low friction quality. Furthermore, carbon fibres are corrosion and moisture resistant, which ensures the best brush even in extremely high humidity. The fine diameter filaments are randomly placed, which allows the user to quickly change powder colours by simply shaking the brush to remove the initial dust. The brush is the softest cluster brush available, consisting of tens of thousands of specially selected carbon filaments. Each brush is individually packaged in a plastic box with lid.

Fiberglass Fingerprint Enhancement Brush

The fiberglass fingerprint brush ensures the ideal development of the fingerprint by applying a sufficient amount of fingerprint powder homogeneously to the surface where the invisible fingerprint is located. Length: 18 cm

Magnetic Fingerprint Powder Applicator

The magnetic fingerprint brush has a spring-loaded ejection system to easily release enough fingerprint powder to the surface where the invisible fingerprint is located. The head is oval in shape and designed to be removable
