

ABS Inoculating Loops

BOENMED® ABS Inoculating Loop

BOENMED manufactures ABS INOCULATING LOOP AND NEEDLE. Inoculation Loop is a simple tool mainly used by microbiologists for inoculation, serial dilution, sterile sampling, sample transfer, and microbiological sample spreading.

Loop and needle combinations make these inoculating tools suitable for both solid and liquid media.

The smooth Loop surfaces with no burrs or flashing making the disposable inoculating loops ideal for streaking and obtaining inoculum without damaging the agar.

The hexagonal shaft design makes the inoculation loops and needles easy to grasp, operate and control the direction.

The 20cm, flexible stem of these sterile inoculating loops can be sent to the narrow or small-volume tubes and dishes easily.

Color coding identifies inoculation volume easily.

Packing:

Supplied with Individual peel pack (easy peel-open) and Zip-lock pack (tamperproof and re-sealable)

Cat No.	Description	Qty/Case(pcs)
620604	Inoculation Loop, ABS material, Flexible, 1 μ L Inoculation loops, 20cm length, White color	5000/10000
620605	Inoculation Loop, ABS material, Flexible, 10 μ L Inoculation loops, 20cm length, blue color	5000/10000
