

## Adhesion microscope slides

Measures: 25 x 75mm

Thickness: 1.1mm

Made of super white glass with positive charge coating specially developed for use in immunohistochemistry (IHC) and other more complex

applications. It offers a great adhesion of the tissue on the surface of the slide. In addition, it also improves staining itself. Hydrophilic surface

tension. Suitable for use in manual IHC staining, automatic IHC staining with Leica and Dako automated IHC Stainers and routine H&E staining of detachable tissue sections.

Models D100020 and D100021 are also recommended for Roche Ventana automated IHC Stainer.

code	description	case quantity	case weight	case volume
D100018	90º polished edges, not clipped corners, matte band	72×20	8,5	0,009
D100019	45º polished edges, clipped corners, matte band	72×20	8,5	0,009
D100020	90º polished edges, not clipped corners, matte band	72×20	8,5	0,009
D100021	45º polished edges, clipped corners, matte band	72×20	8,5	0,009
