

About us

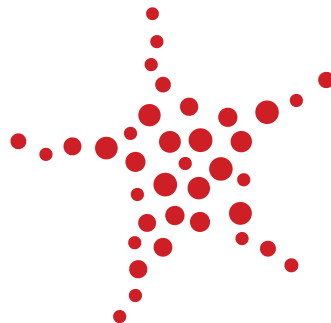

Maxxline is an affiliated brand of AHN Biotechnologie GmbH, which has acquired extensive experience and expertise in the production of plastic consumables for laboratories since 1999.

The market demand products that ensure and optimize the productivity and provides greater process reliability.

Maxxline reflect innovative “ways and means” for the production of plastic products combined with focus on the highest level of quality.

Based on this we have developed a new unique product - Maxxline Cryo Tubes with a StraightLine™ design.

Maxxline products are designed and manufactured in Denmark.

Our star

The graphic symbol in our Maxxline logo is a Sea Star.

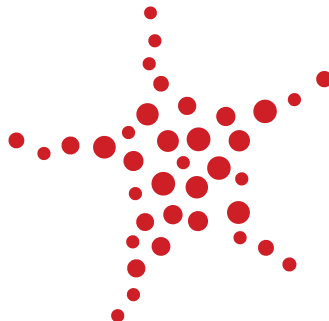

The Sea Star symbolizes our unique products.

At first sight, the Sea Star seems simple and yet they are complex multicellular organisms with unique and surprising properties. The Sea Star for example can regenerate lost body parts.

Our Maxxline Cryo Tubes is a new product, with surprising properties. A unique star when it comes to the storing of biological material, human or animal cells for research.

Like the Sea Star with its five arms our Maxxline Cryo Tubes stands solid on five feet.

Your tube, your future.

We make
the difference

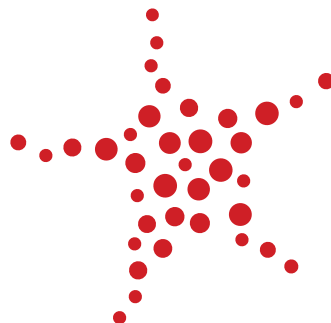

As a leading manufacturer of Cryo Tubes we know that functionality and quality are properties of the highest importance in a product for professional use.

Properties we always take in consideration when designing new products for our product range.

It is important to us that our customer has the best experience when using our products. Therefore, convenience is a milestone in everything we do.

The development and final design of Maxxline Cryo Tubes are based on many years of experience from working with and selling to leading laboratory technician's all over the world.

Maxx features

Ergonomics

Maxxline Cryo Tubes are featured with single-handed quick seal closure. The super fast thread design allows tightening or removal with only half a turn, thus avoiding long-term injuries to the user.

Max volume

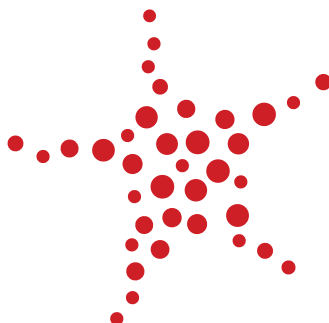

The Maxxline Cryo Tubes are easy to recognize with the red line indicator. The red line shows the maximum recommended filling, which is your security for safe storage.

Contamination

The StraightLine™ design with its tight closing eliminate contamination.

Optimize your storage

The StraightLine™ design of the Maxxline Cryo Tube gives you approximately 23% additional storage capacity compared to conventional cryo solutions.

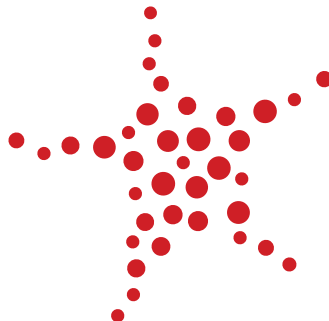

Think ahead

We work exclusively with the best materials and product designs that optimizes the manufacturing.

The material use and the power consumption are kept to a minimum.

Our products are produced of raw materials compliant to applicable regulations and standards, and are free of any substances considered dangerous for the environment.

Your tube, your choice, your possibilities, your future.
