- Store in a cool, dry place out of direct sunlight

Prolonges probes lifetime

Simplifies probe cleaning and disinfection procedures

Prevents microorganisms cross-transmission

Founded in France in 1937 and with more than 70 years of experience under the name of Prophyltex first, then Protex, Laboratoires Radiatex played a pioneering role, commercializing in 2002 the first polyurethane condoms (latex-free) Protex Original 0.02.

Now a subsidiary of the Sagami Rubber Industries group, one of the largest Japanese condom manufacturers, Protex benefits from the technology and recognized quality of Sagami Group products, sold in more than 80 countries. Protex also meets the ISO 4074 standard which specifies the requirements and test methods to be used for male condoms made from natural rubber latex.

The Sagami Group is also at the forefront of medical technology by supplying the health professionals with lead probe covers around the world. Protex probe covers, by virtue of their quality and robustness, provide perfect hygienic and aseptic conditions for radiology and ultrasound equipment.
