

EXCRETA COLLECTION BAGS WITH SUPER ABSORBENT PAD

Safe collection, transport
and disposal of *excreta*

Excreta (stool, urine, vomiting) are a major source of propagation for these infections. Collecting *excreta* safely allows:

- To avoid the contamination of supports (male urinal, bedpan, commode pail)
- To reduce the propagation of nosocomial infections
- To improve the comfort of the patient and the caregiver
