

VAIDIO CORE 9.0.0

CORE FUNCTIONS USER GUIDE

OVERVIEW

Vaidio Core offers **Search**, **Alert**, and **Statistics** for all videos and camera streams.

- ❑ **Search:** Search for objects (e.g., Person, Truck, Wild Animal) in all selected footage and live streams.
- ❑ **Alerts:** Set rules, triggers, and receive real-time alerts on any device.
- ❑ **Statistics:** Generate business insights from large-scale video data over time.

SEARCH

-  [Overview](#)
-  [Dashboard](#)
-  [Search Filters: Source and Time](#)
-  [Search Filters: Object Types](#)
-  [Search Filters: Camera ROI](#)
-  [Detail Screen](#)

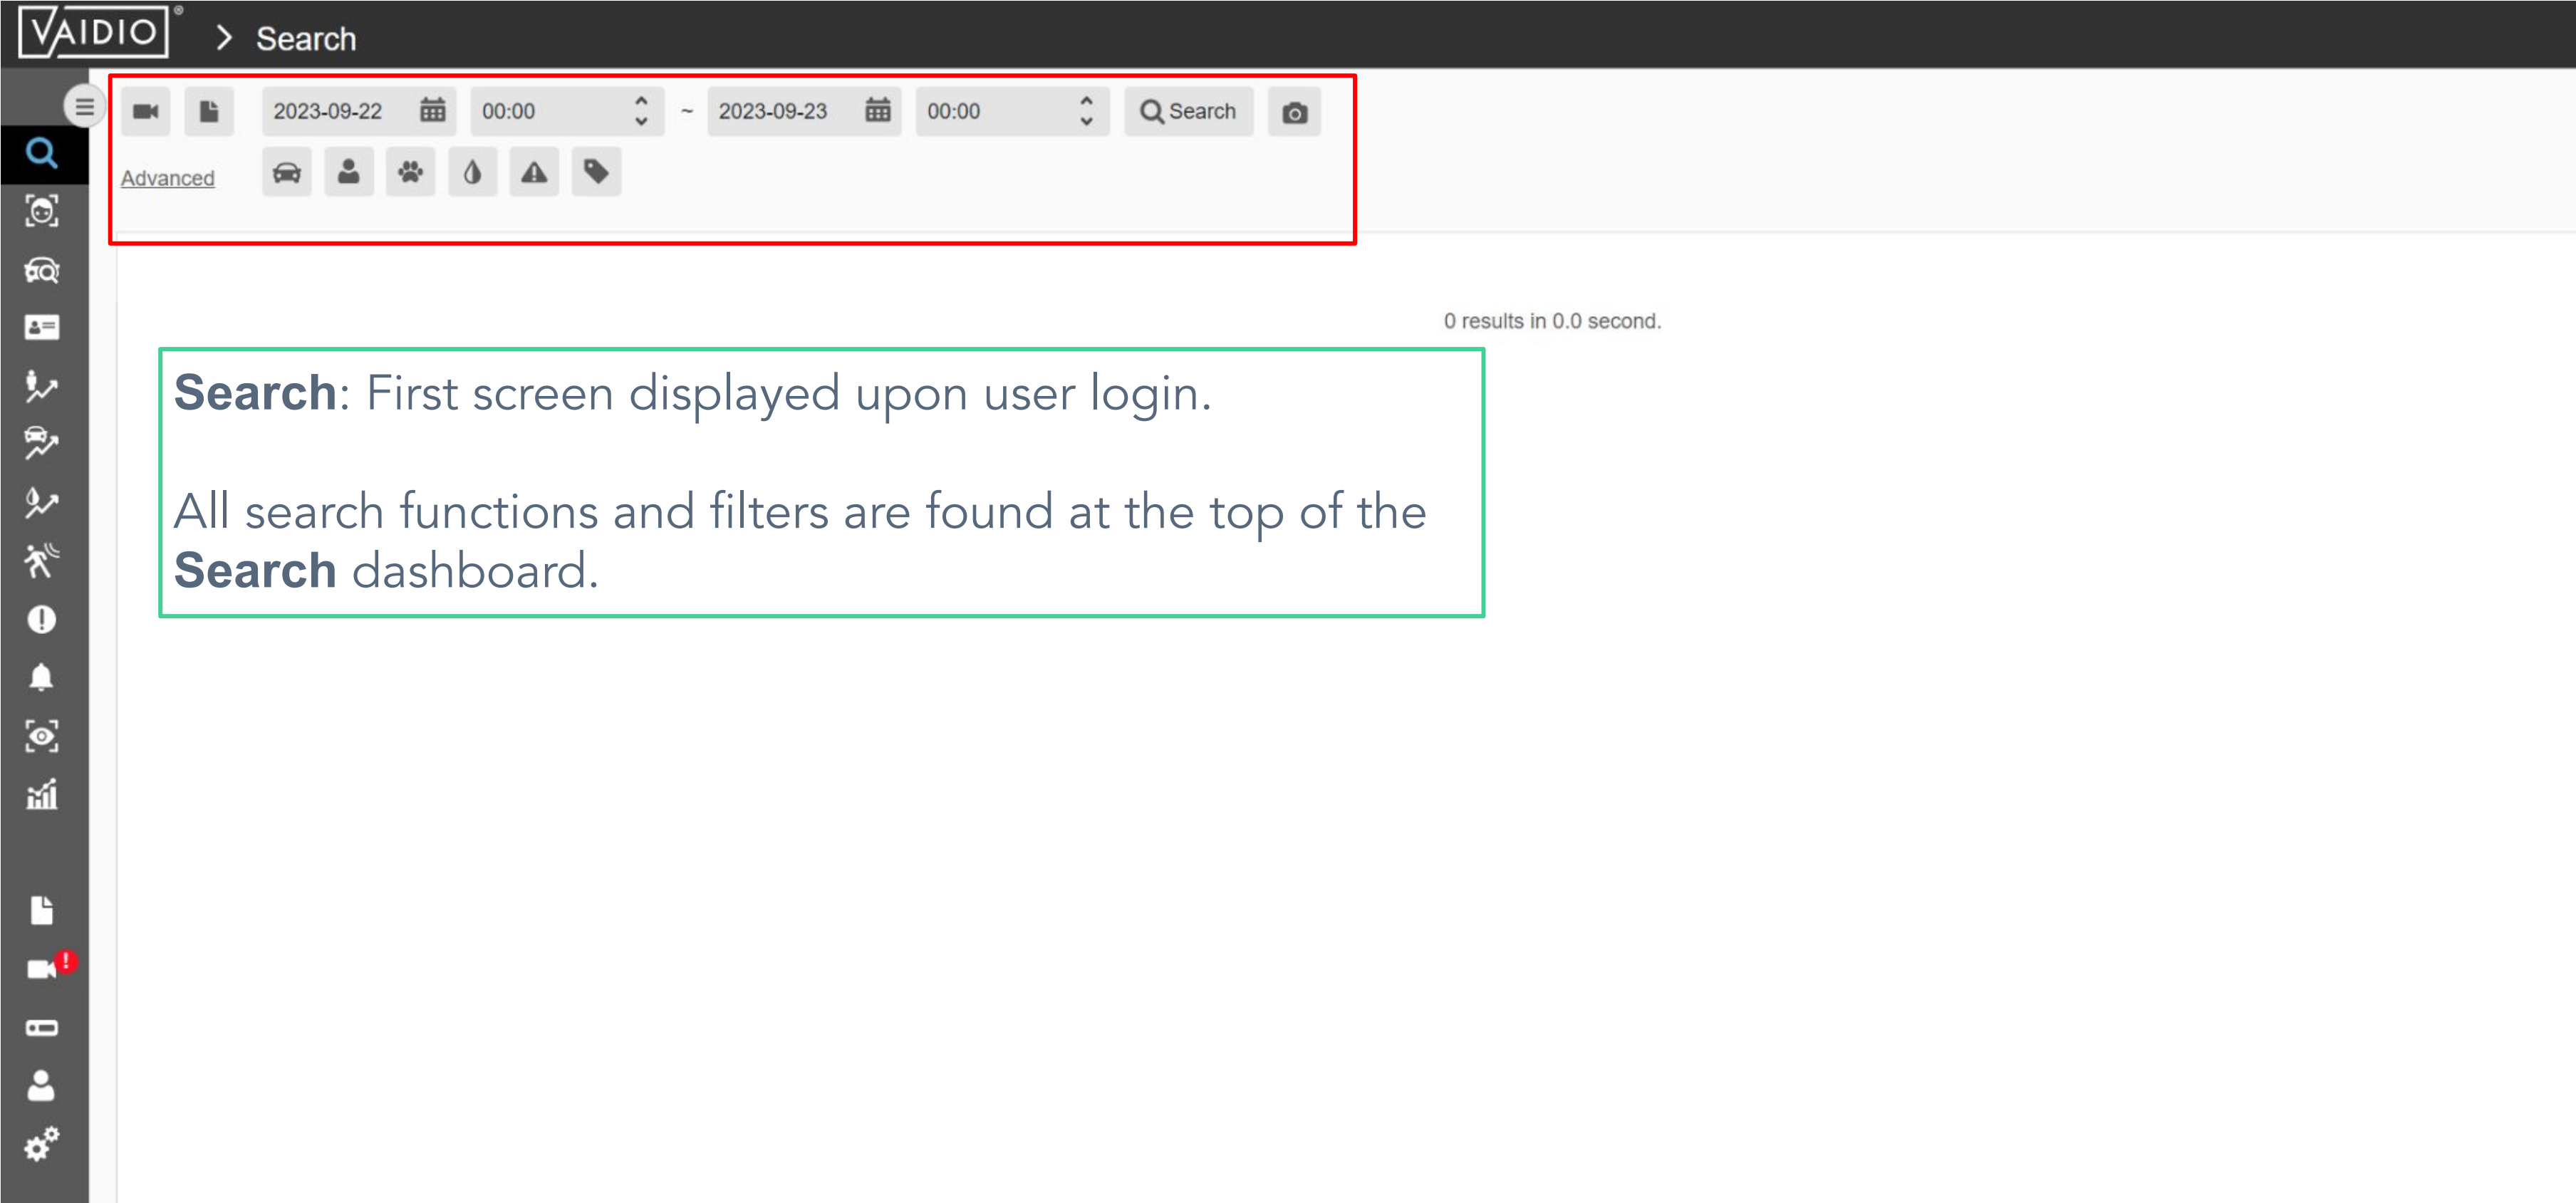

OVERVIEW

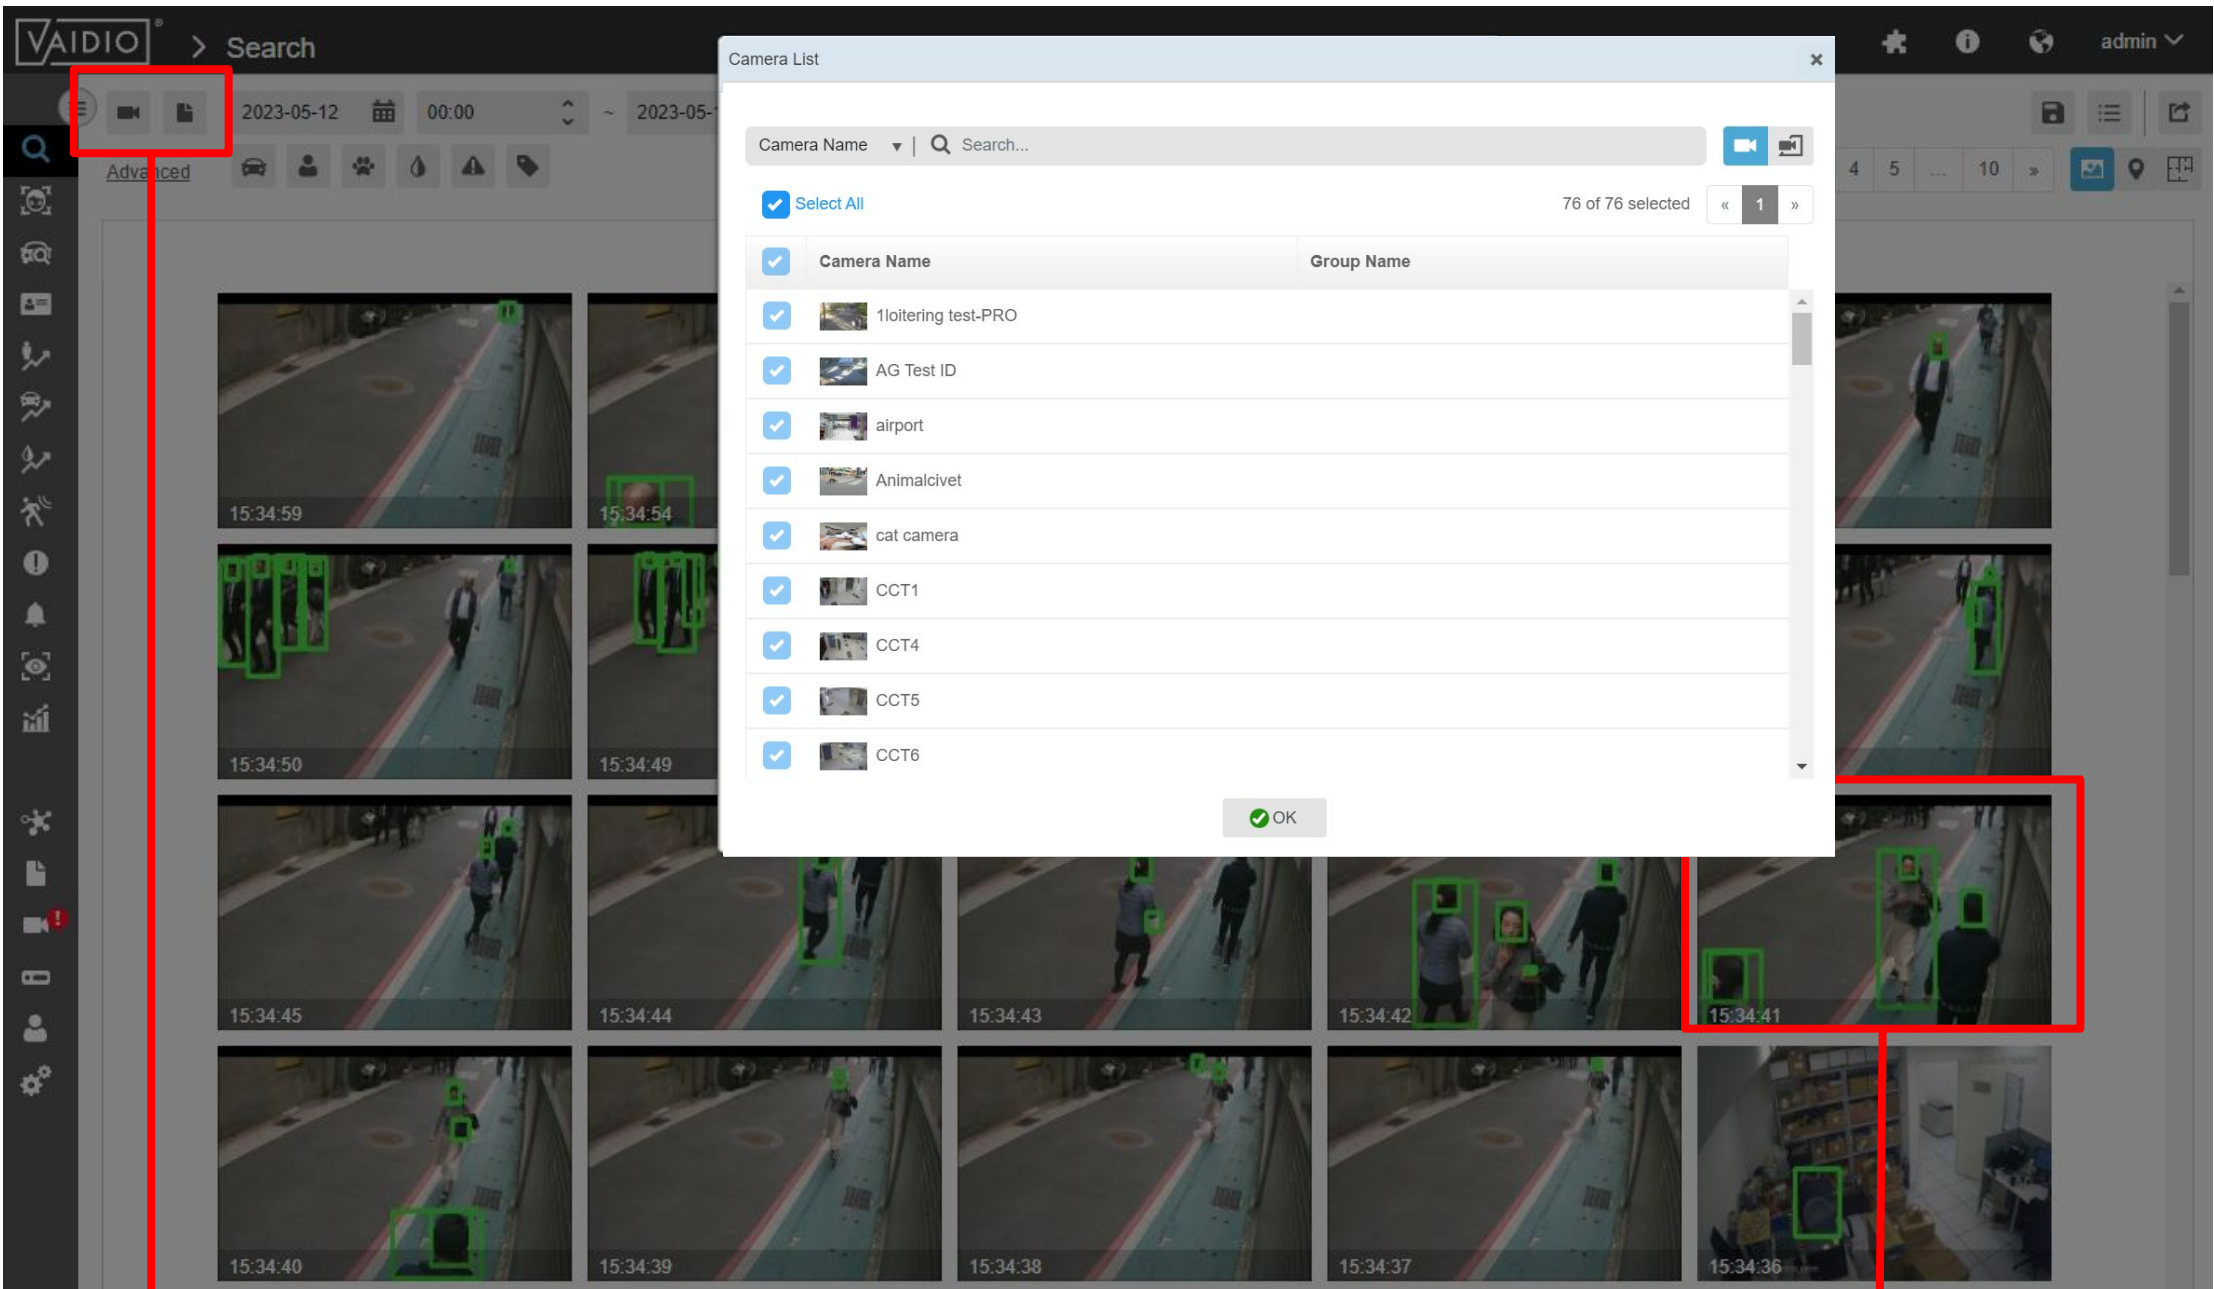

Search in Vaidio Core:

- ❑ Available with ALL analytic engines.
- ❑ Begins object detection once a video source (e.g., camera, file) is connected (see [Vaidio Core Setup Guide](#) for information on configuring camera(s) and managing object detection profile(s)).
- ❑ Stores metadata for users to search detected objects.
- ❑ Auto-enabled when cameras are activated (see [Object Detection User Guide](#) for more information).

DASHBOARD

SEARCH FILTERS: SOURCE AND TIME

- ❑ Select the **Camera icon** to select/deselect cameras on which to perform **Search**
- ❑ Select the **File icon** to perform **Search** on uploaded files
 - ❑ Default: Search through all cameras (live streams)

Set Time Period for Search:

- ❑ Ensure the file's **upload date/time** falls within the selected range.
- ❑ Verify the correct **time zone** is set in **System > Time** and syncs with the **camera/NVR** (if connected).

Click the **camera icon** to upload an image from local drive and search for **detected objects**.

Note

Works best with **one** to **two** clear objects (e.g., a person in red).

Click on a **thumbnail** to view the **Detail screen** of the detected event.

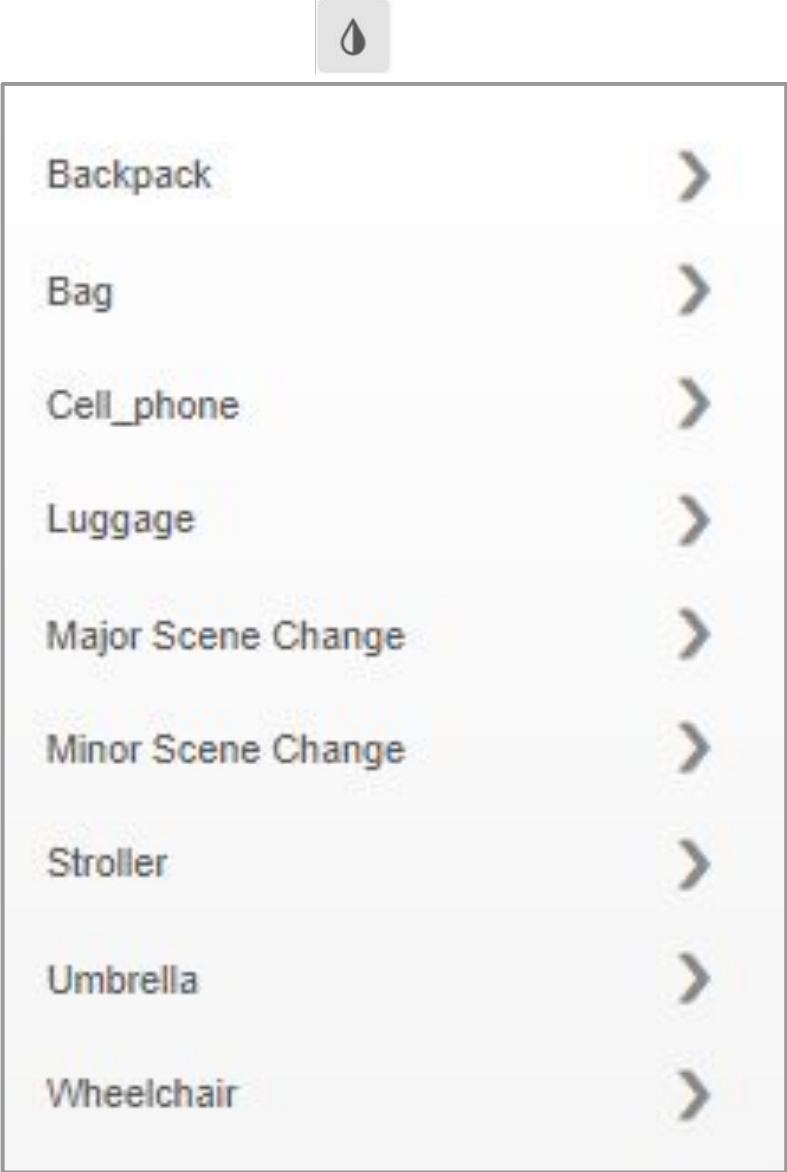

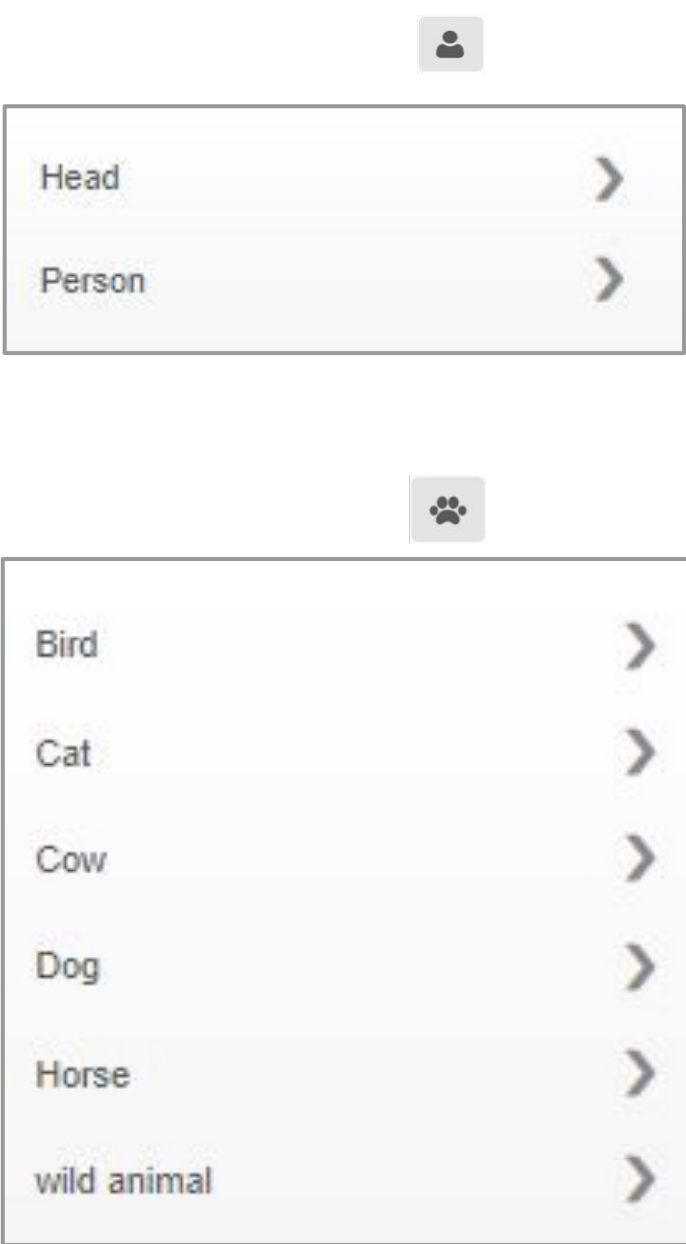

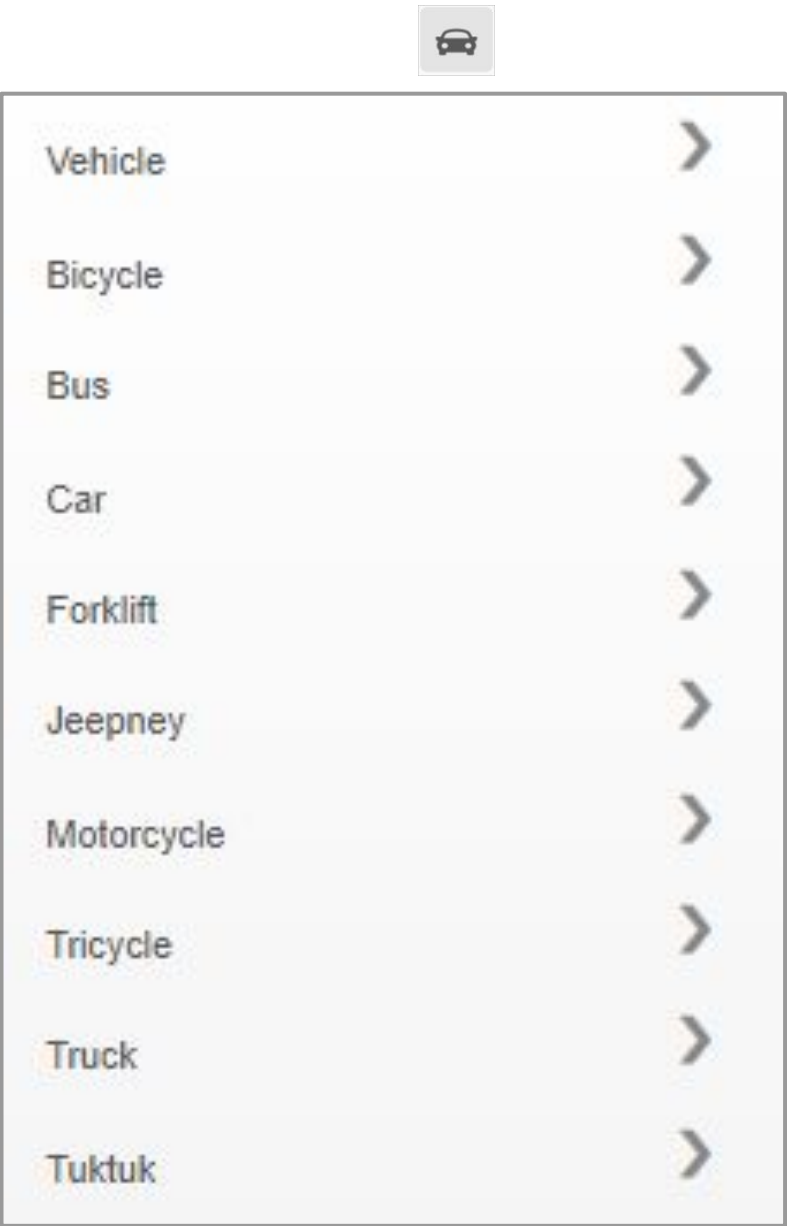

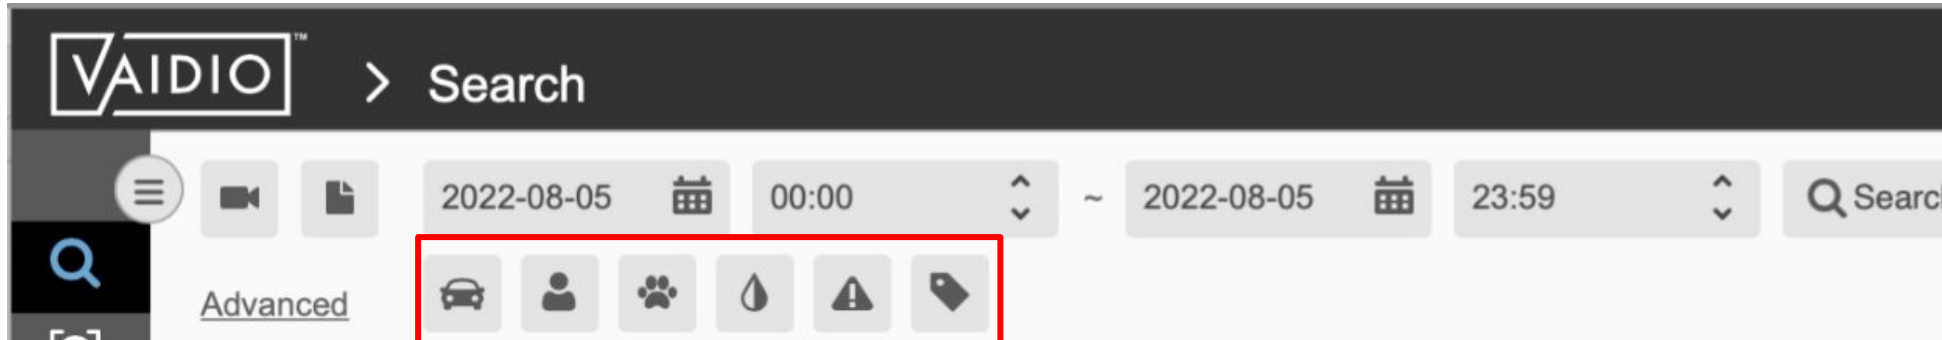

Return to [Search](#)

SEARCH FILTERS: OBJECT TYPE

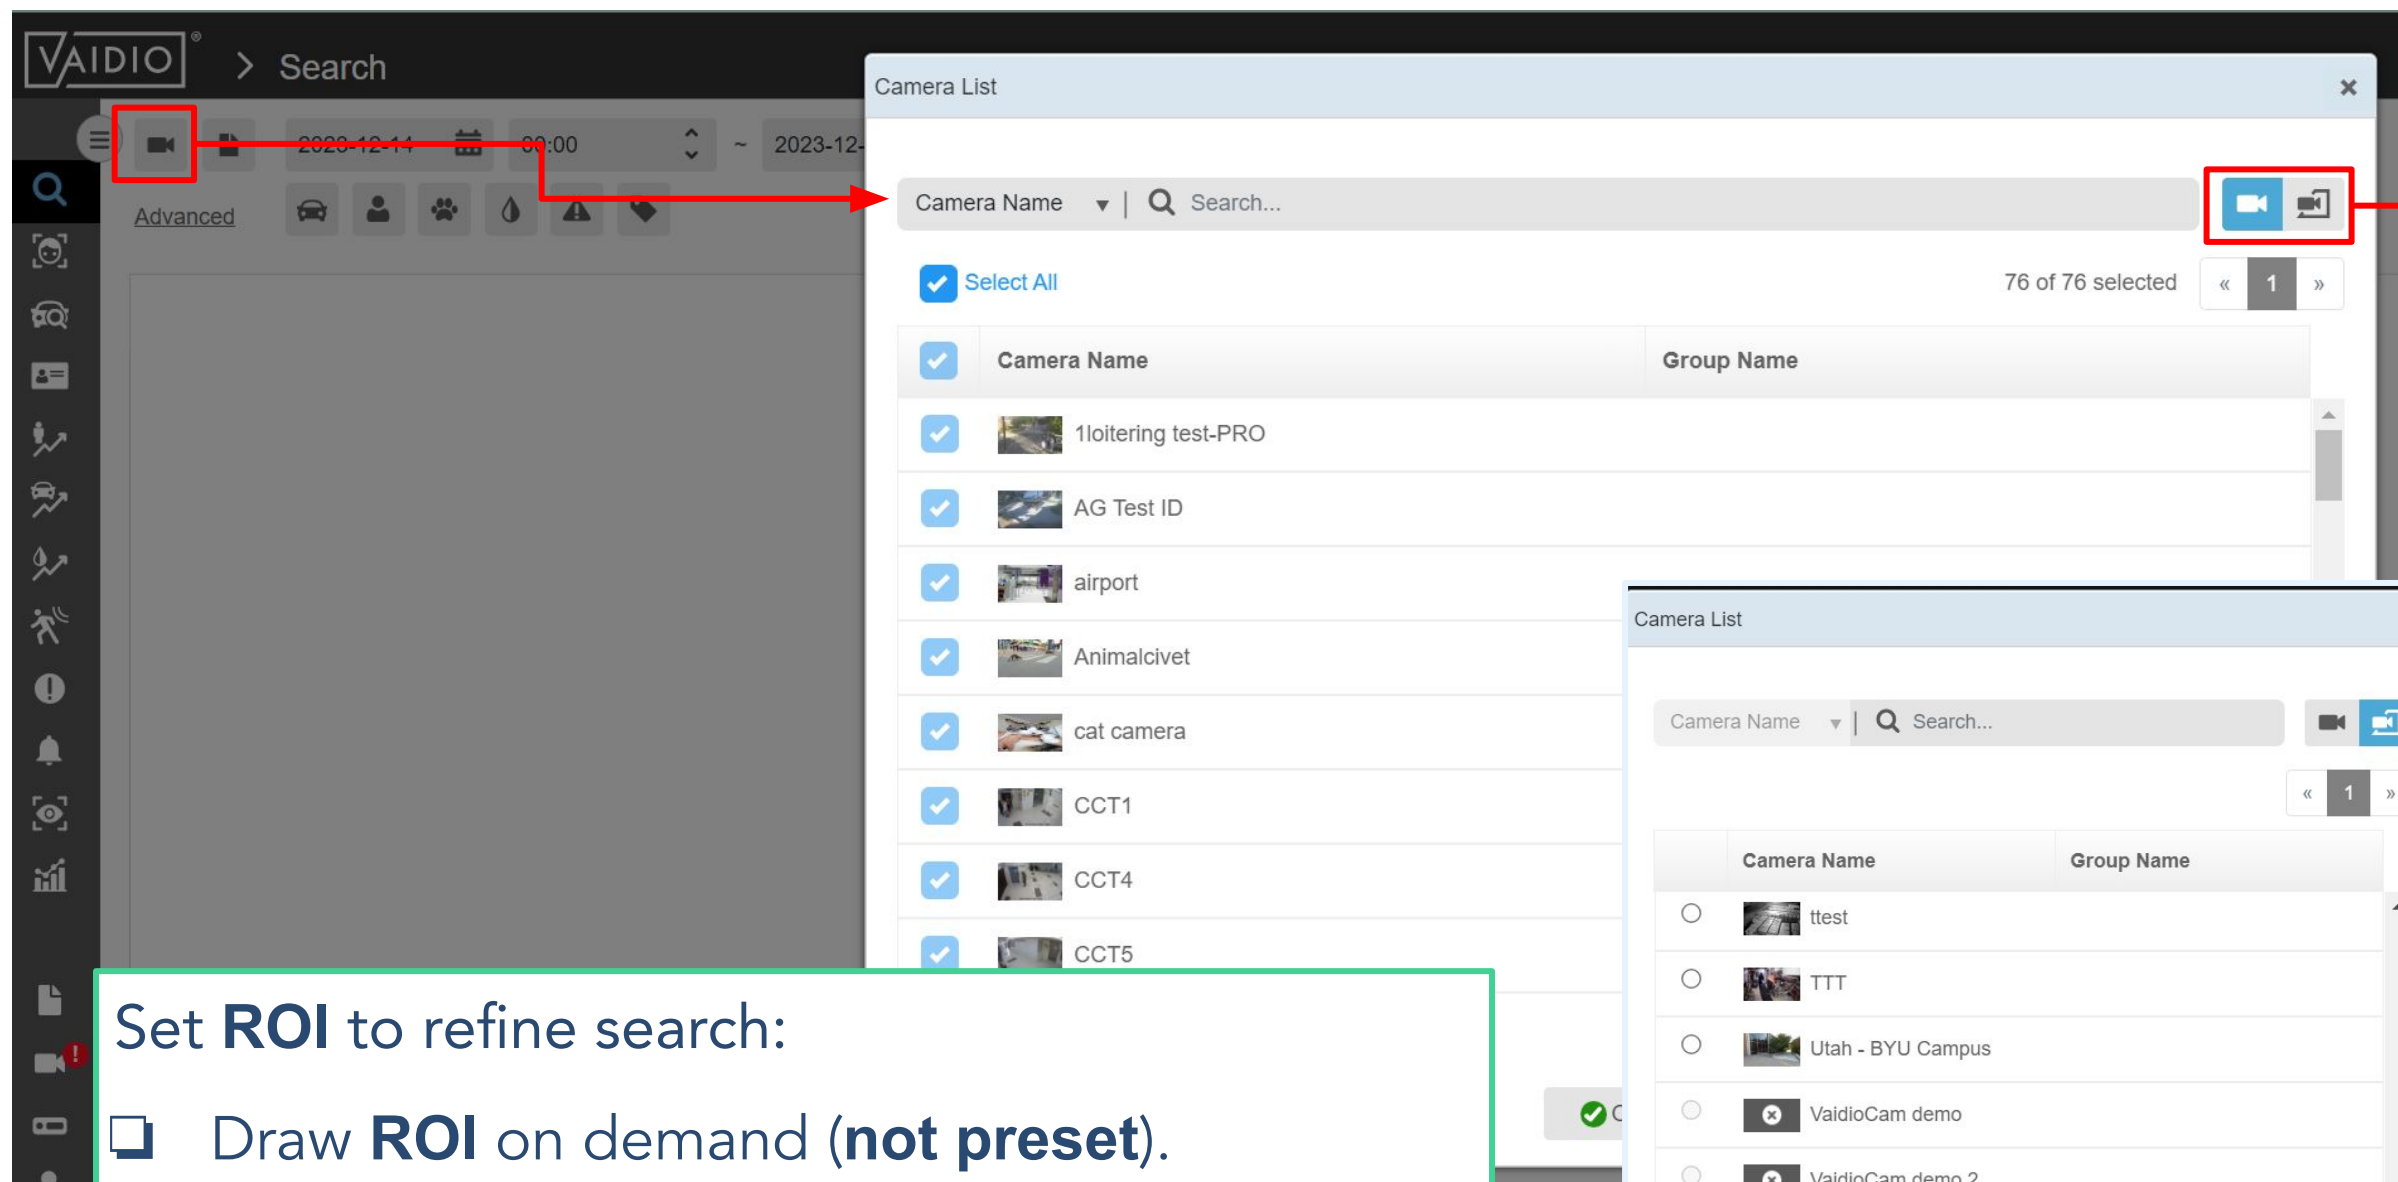

Click **category icons** to search **Object Types** & attributes:
Vehicle, People, Animal, Object, Dangerous Object.

Available **object types** depend on the **AI Model(s)**. Below are those in the **default PowerModel**.

For more information on uploading additional AI Models, see the [Core Setup User Guide](#).

SEARCH FILTERS: CAMERA ROI

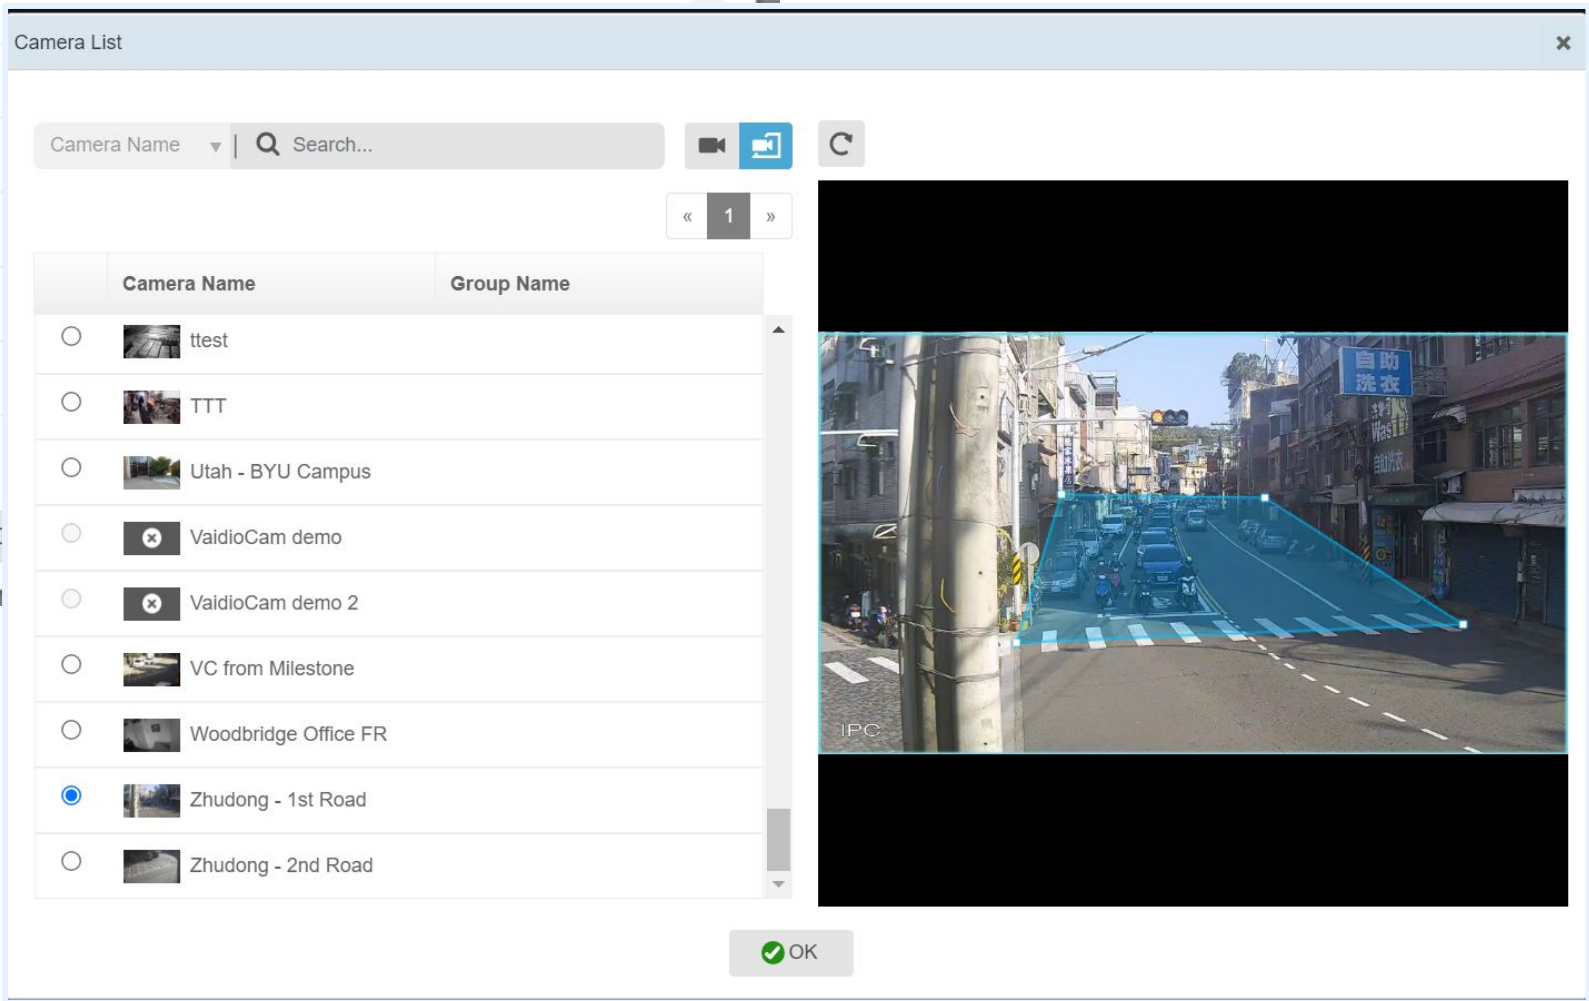

Wide Range (multi-camera): Regular search to get more results

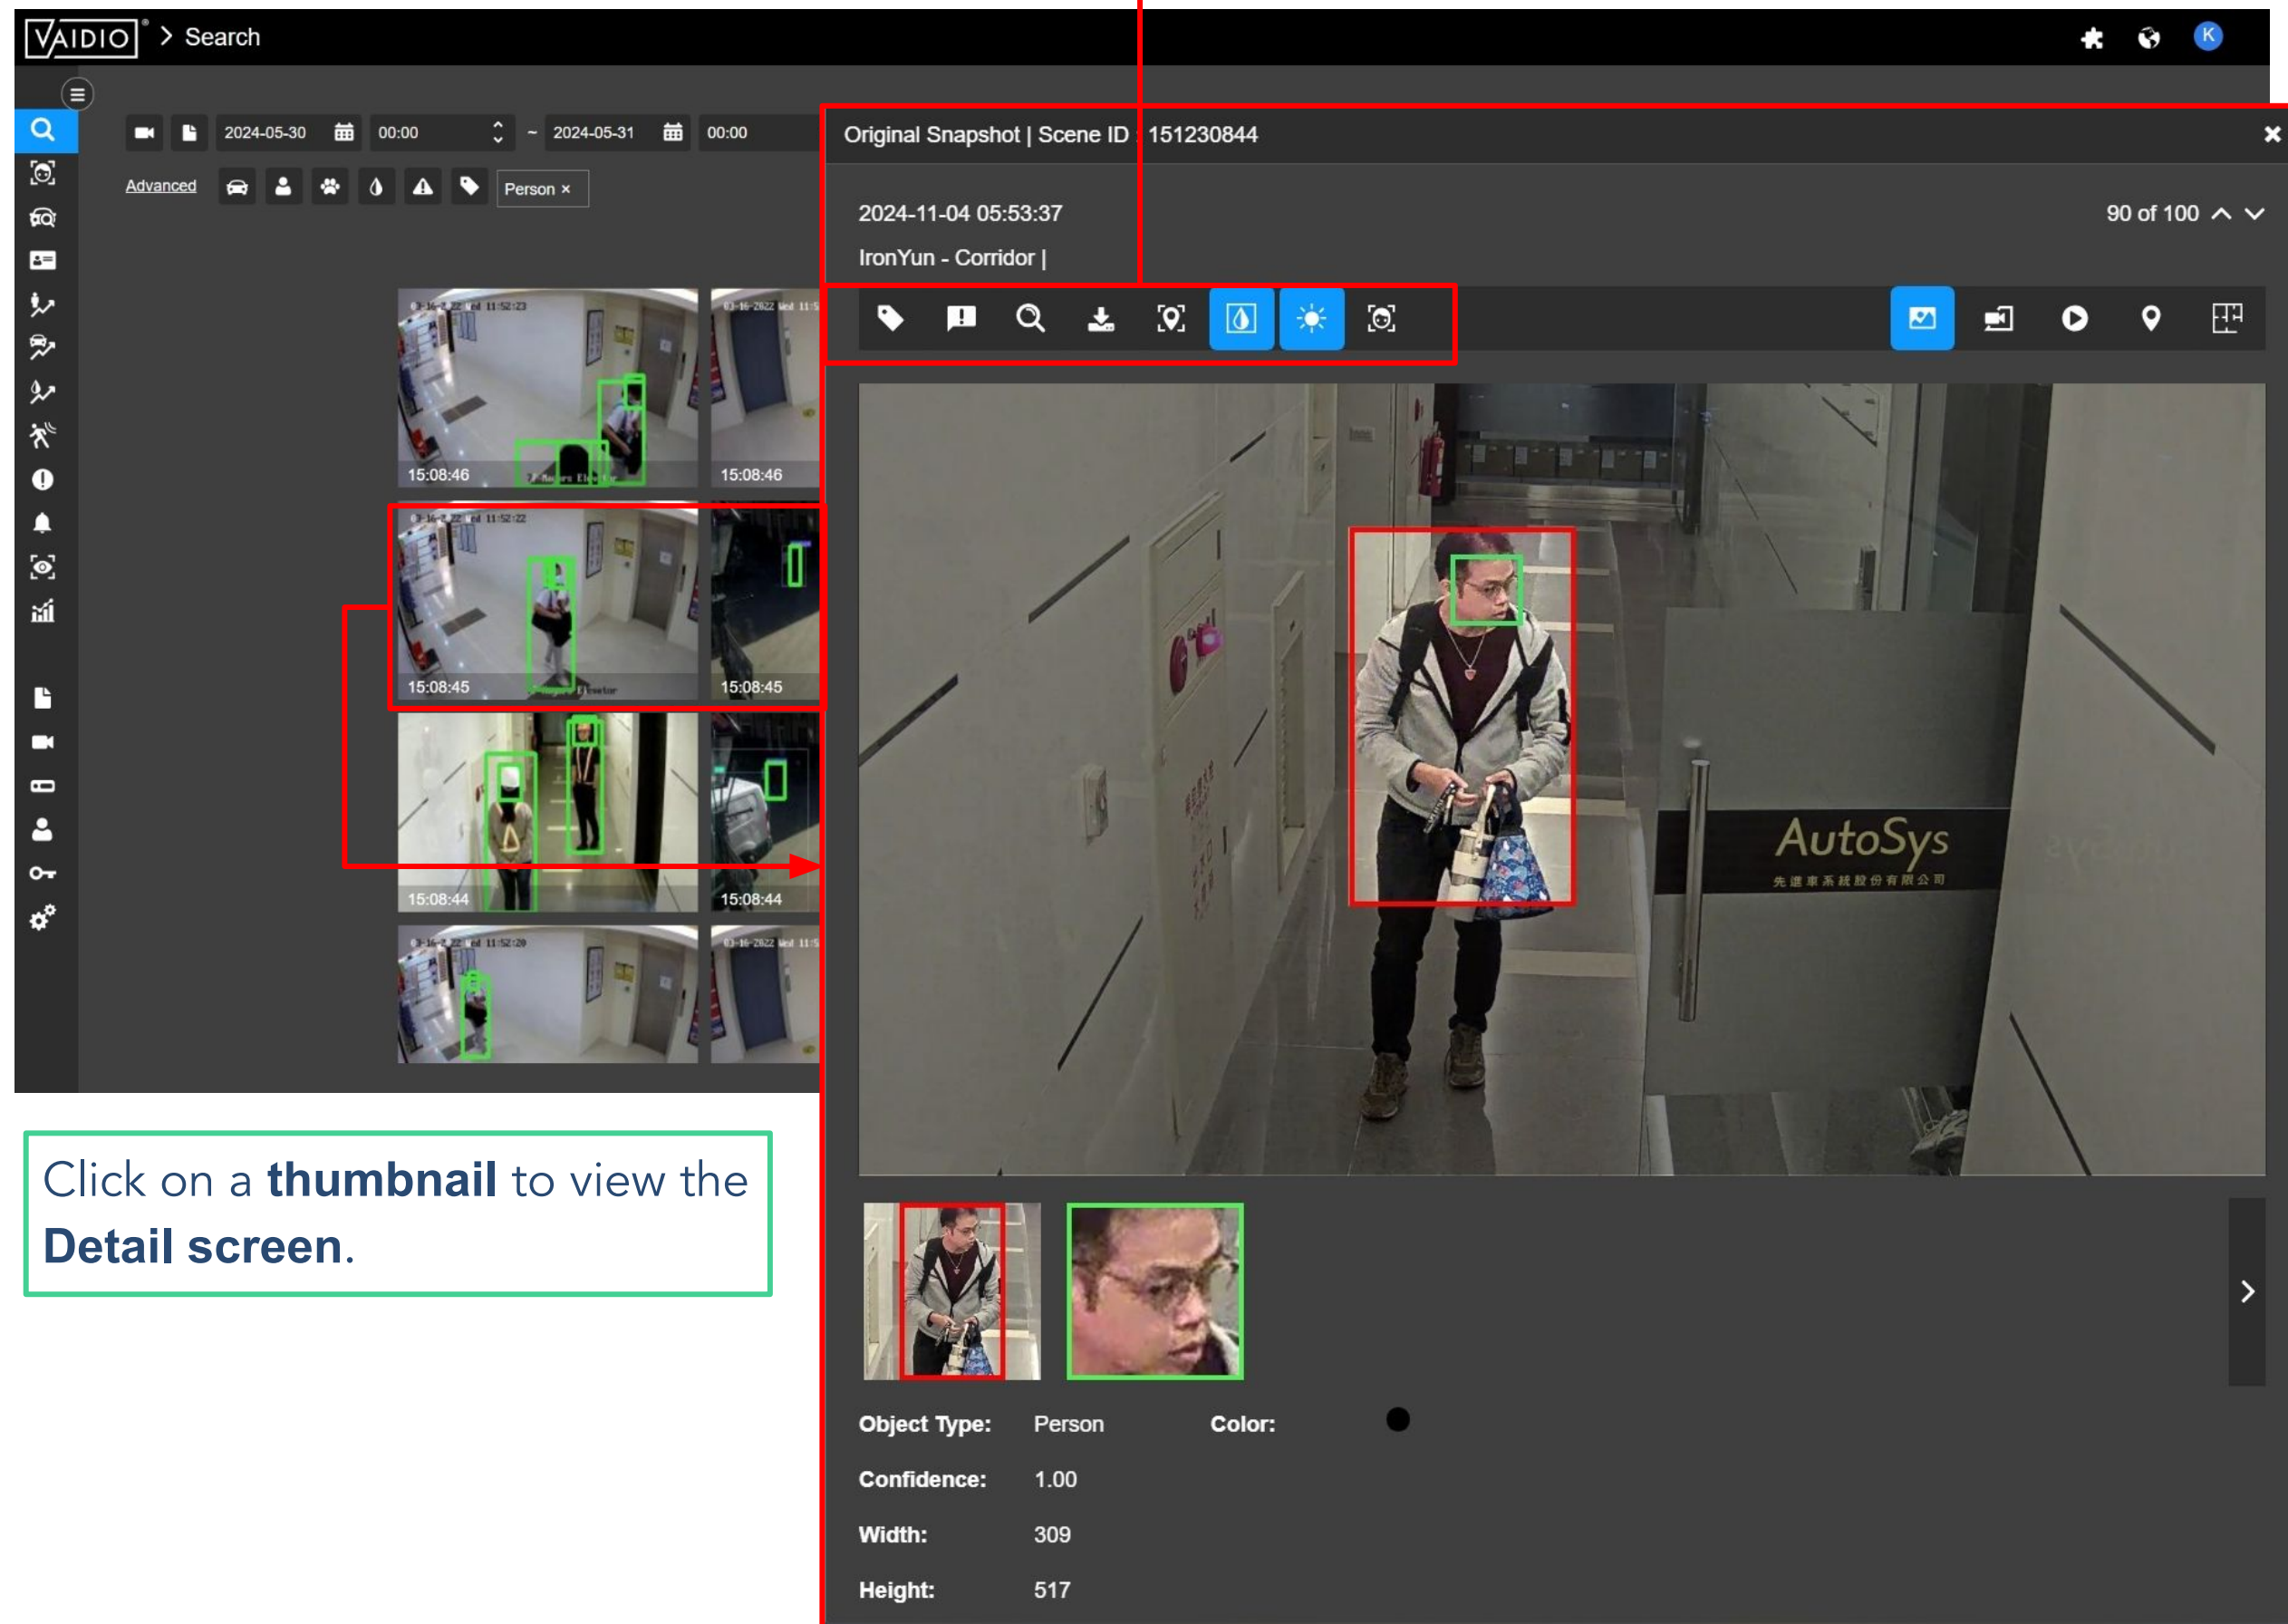

Precise (single-camera): Define an ROI in the camera FOV to get fewer but more precise results

- Set **ROI** to refine search:
- ☐ Draw **ROI** on demand (**not preset**).
 - ☐ Toggle **Wide Range** or **Precise mode** in the **Camera List** (top right).

DETAIL SCREEN

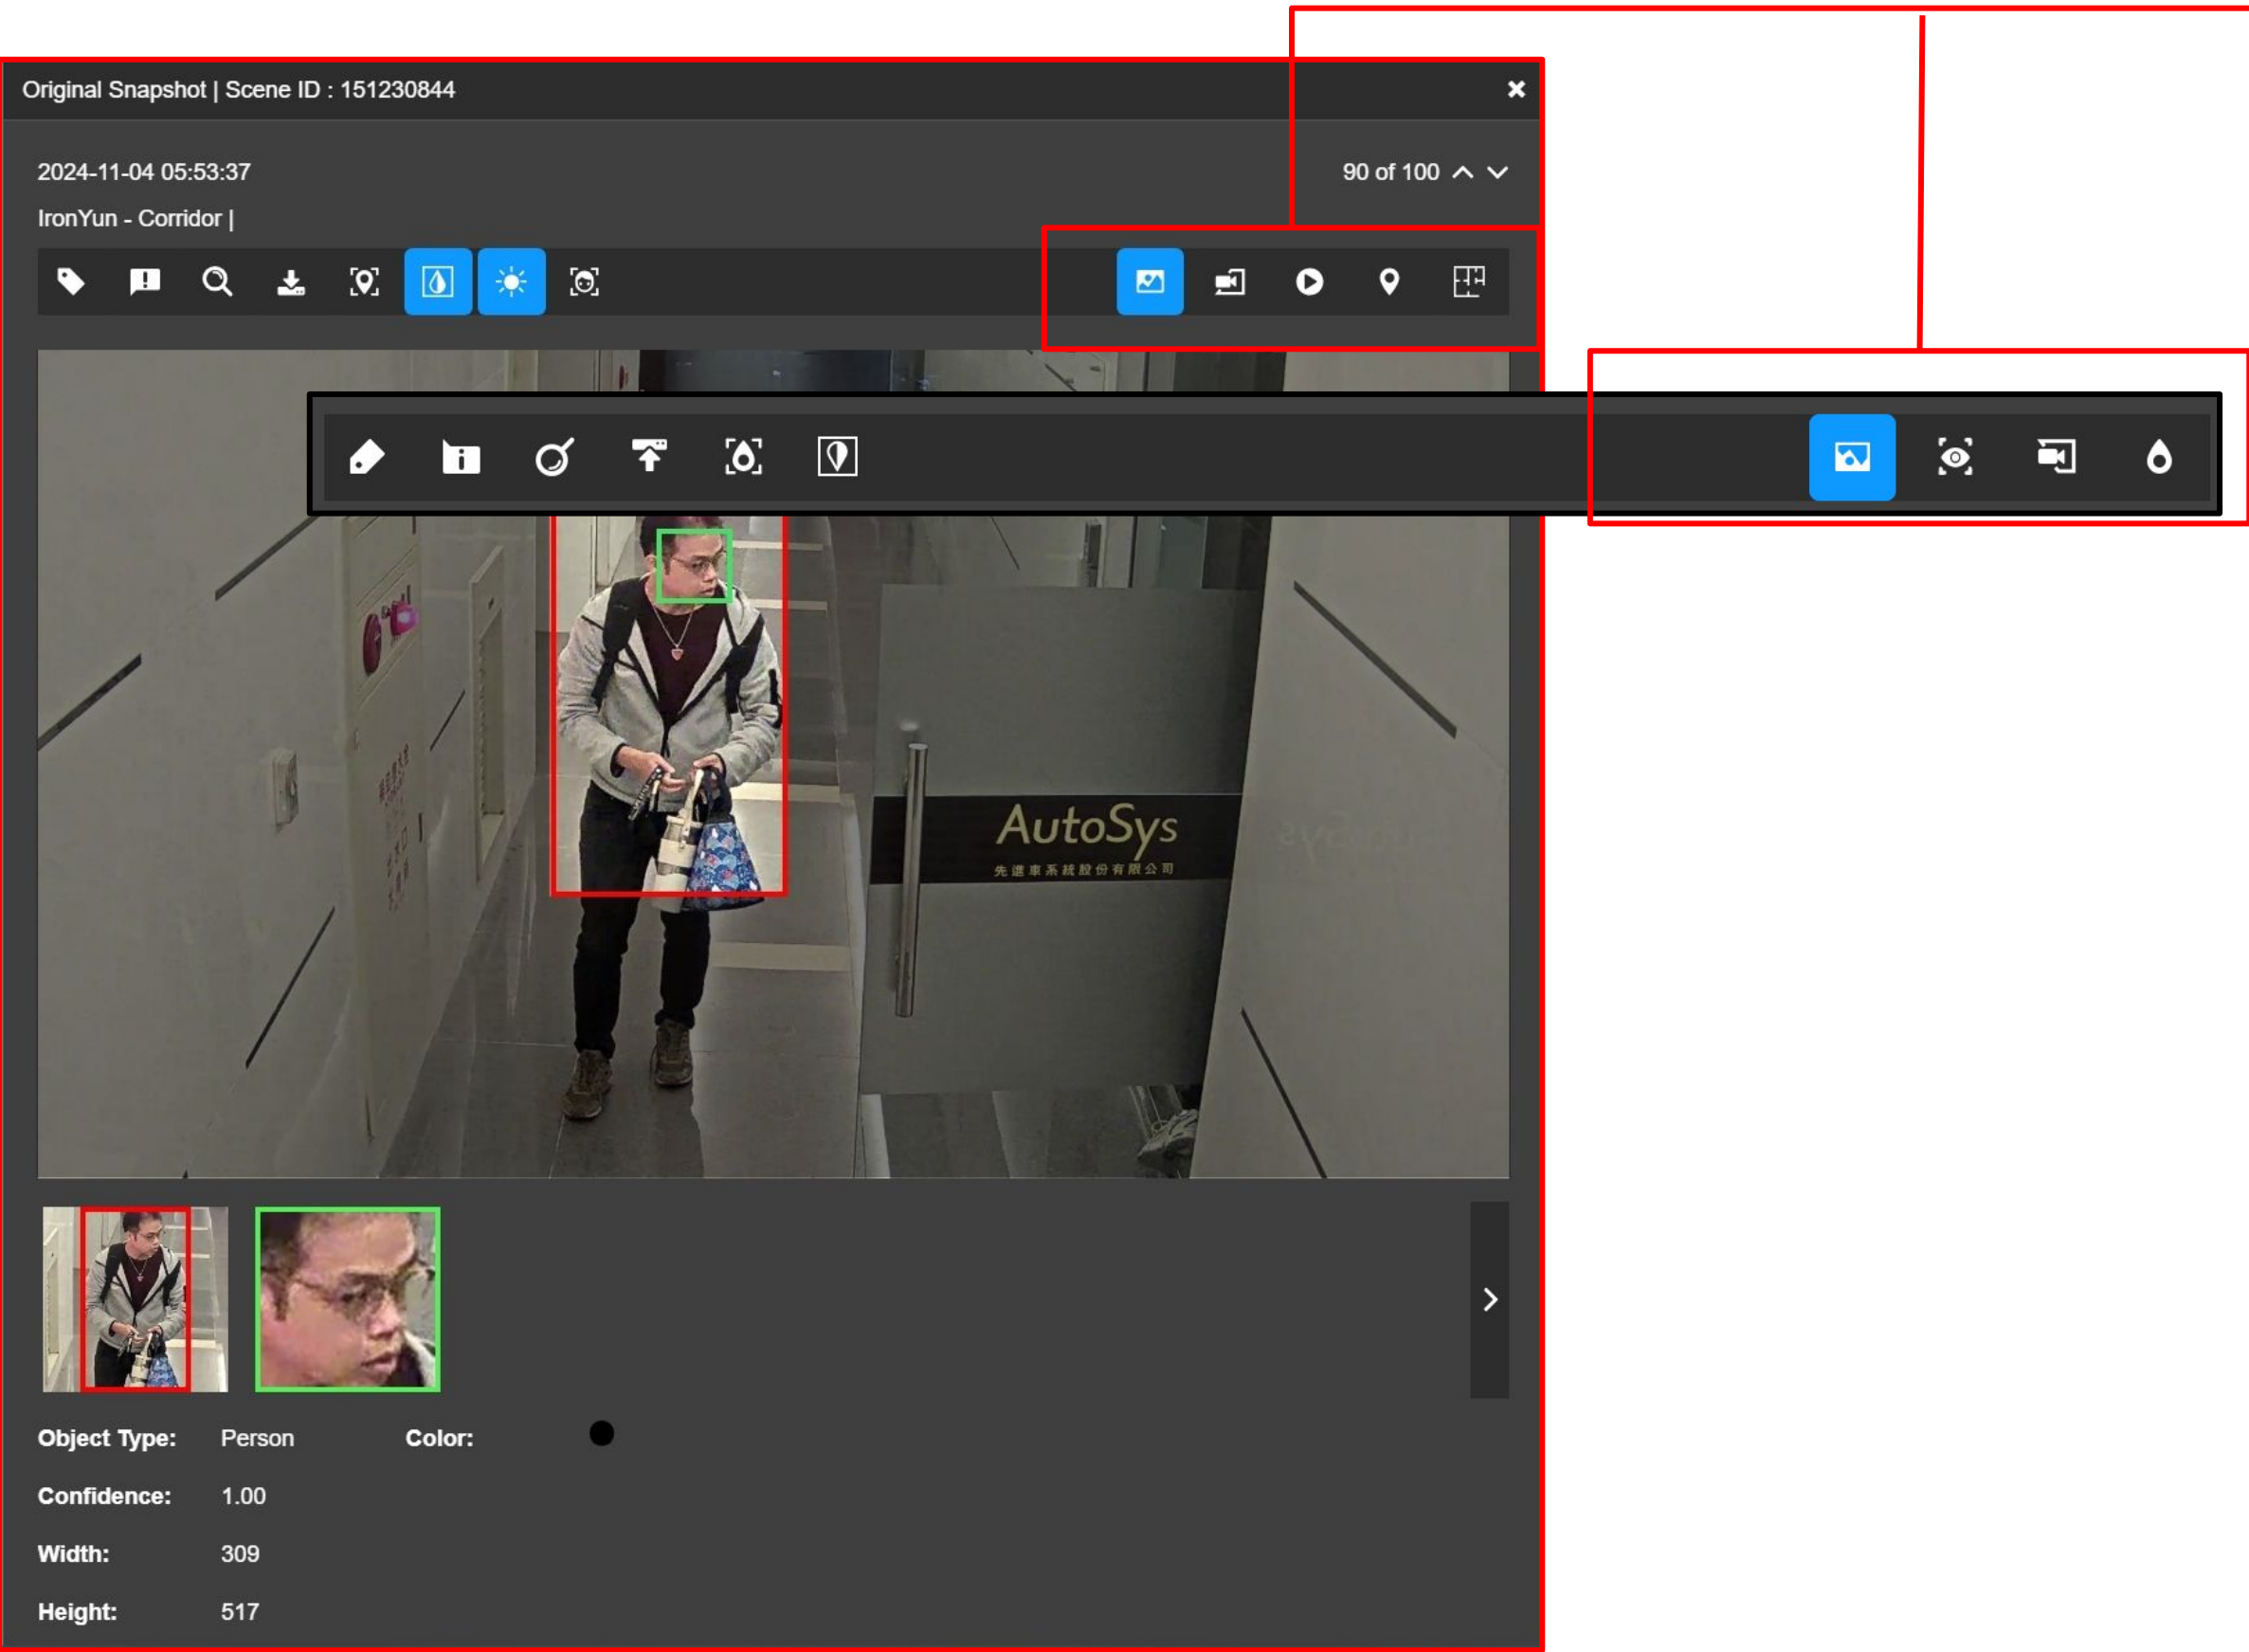

Icons:

-  Add [hashtag](#) to search for the detected event in the future; e.g., #caraccident
 -  False Detection Report if connected to internet (see [Report False Detection](#) for more information)
 -  Enlarge an area in the image
 -  Download the image
 -  Show Cross Camera Tracking
 -  Show the bounding box of the detected objects
 -  Show spotlight mode (focus on object of search)
 -  Conduct Face Search for an individual
 -  Blur/unblur faces/people in the image

Return to [Search](#)

DETAIL SCREEN (CONT.)

Icons:

Show image of the detected event (default)

Draw an ROI to limit searches to a specific area of the camera FoV

Show video playback if NVR has been added to the camera

Show camera location on GPS map

Show camera location on indoor map

Show camera Live View

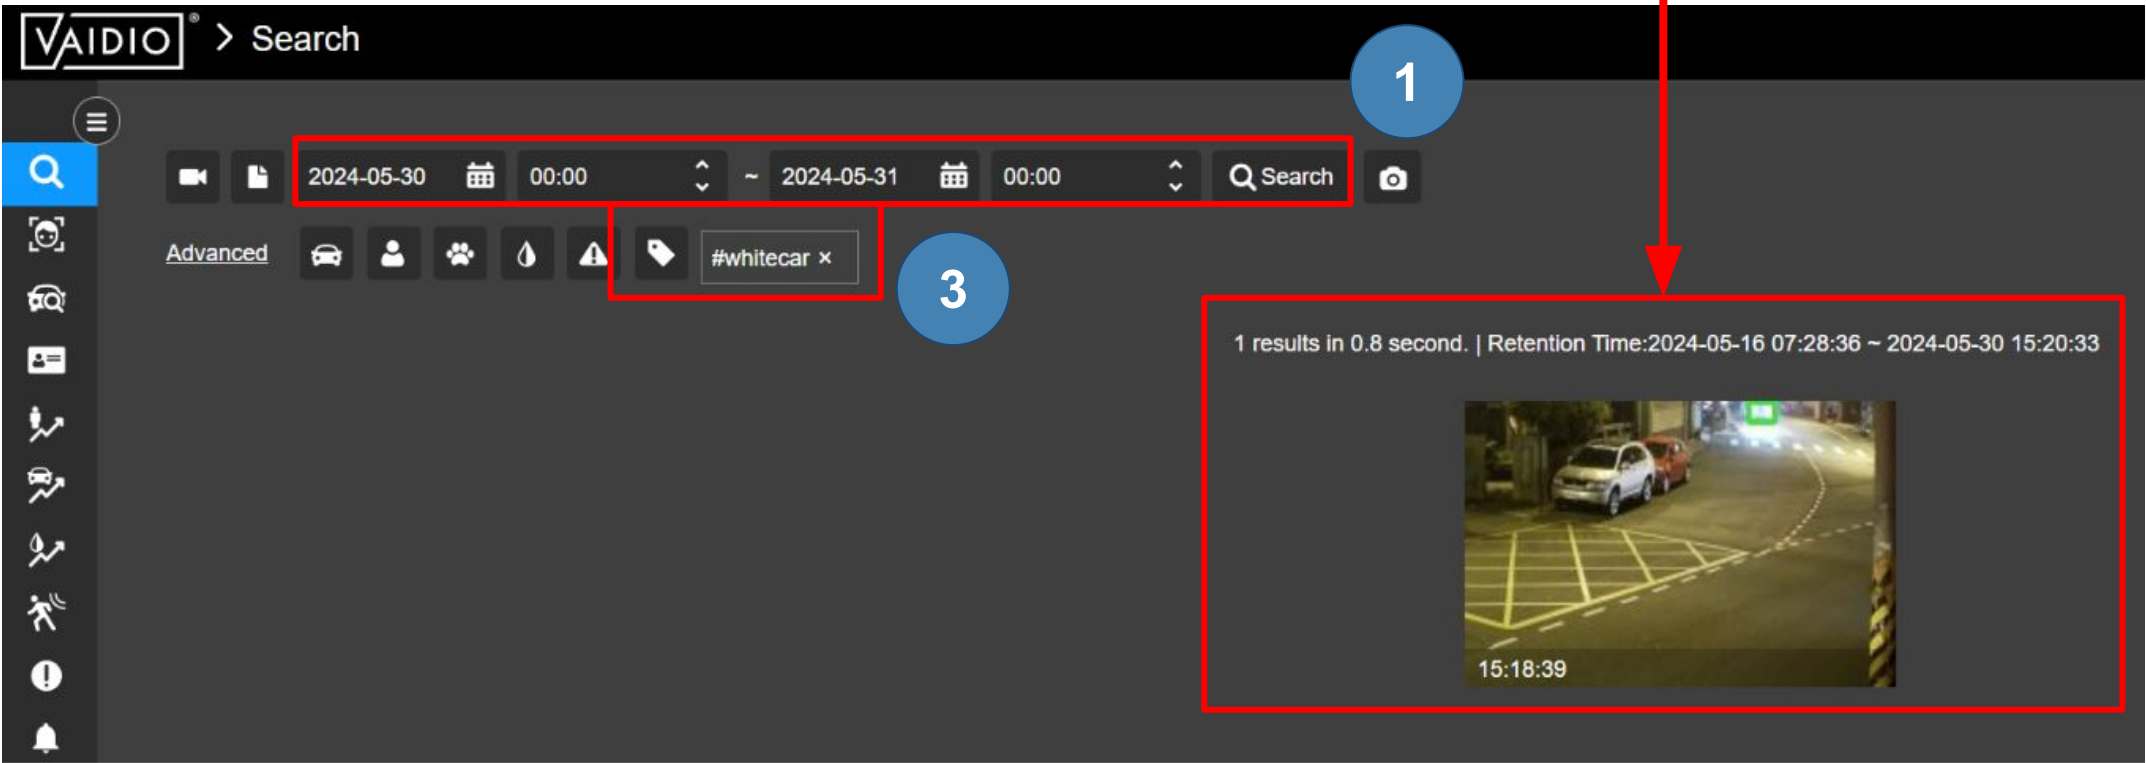

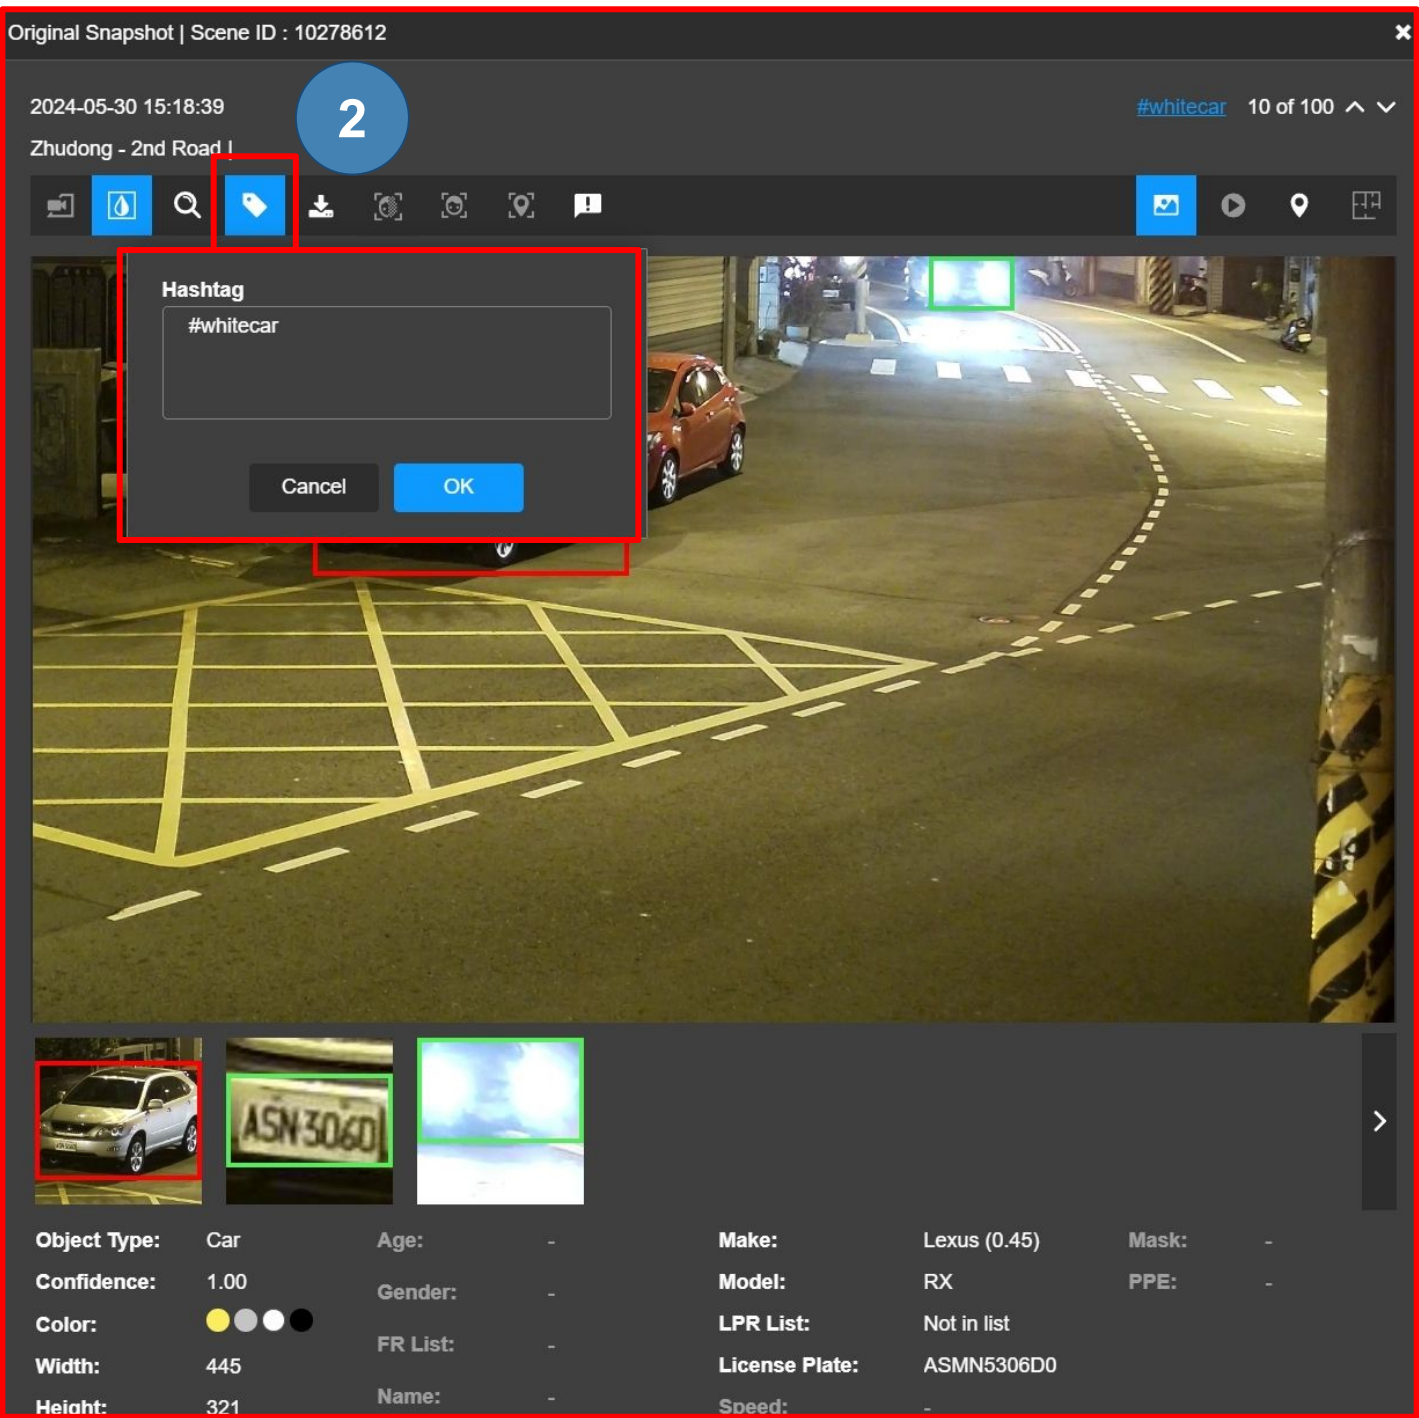

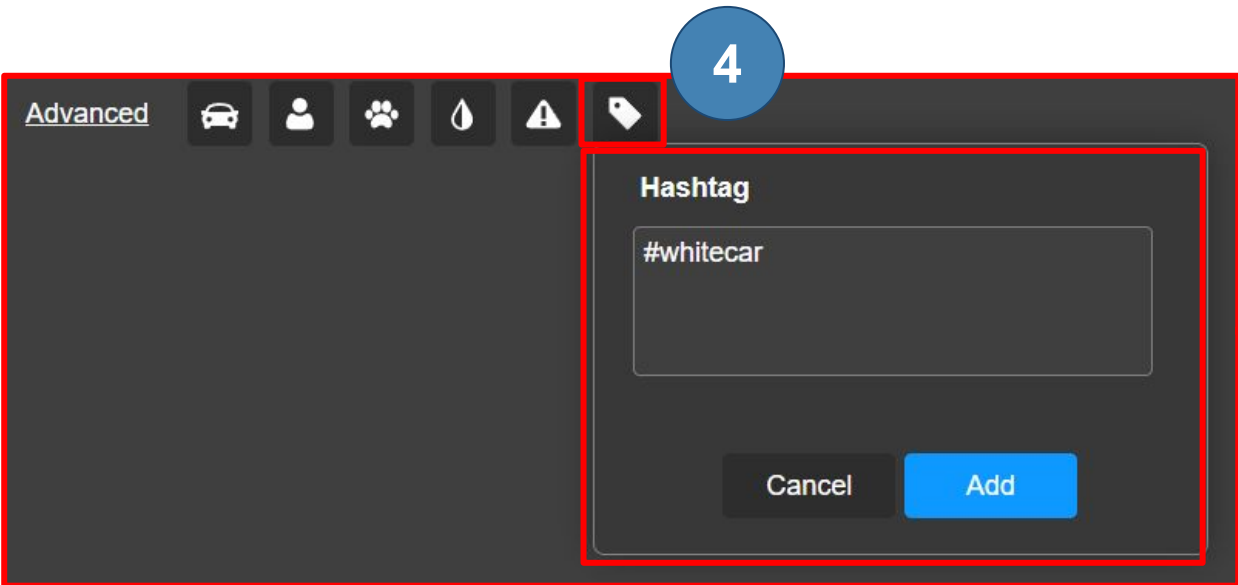

Full Screen View

Return to [Search](#)

SMART TAG

Add a **Smart Tag** to the **detected events** (results) to **bookmark** a **specific situation**.

- Smart Tag(s) can be added to all **analytic results**, including **object search, intrusion, face recognition, abnormal event**, etc.

1. **Search Dashboard** > search for an **event** > select the **event thumbnail** to access its **Detail screen**.
2. Select **Hashtag** and enter a **name** for the **Smart Tag** (e.g., #whitecar) to **bookmark** the **specified event**.
3. From the **Search Dashboard**, select **Hashtag** > **Add** the **Smart Tag name**.
4. Click **Search** to return **ONLY results with the same tag** (e.g., #whitecar).

Return to [Search](#)

ALERTS

 [Overview](#)

 [Alert Types](#)

 [Add New Alert](#)

 [Alert Scheduling](#)

 [Copy Existing Alert Trigger Action](#)

 [Alert Dashboard](#)

 [Alert History](#)

 [Alert Acknowledgement](#)

OVERVIEW

Vaidio Core enables **multiple real-time alerts** via **Alert Rules**.

- ❑ View **live alerts** from the **Alerts Dashboard** and search **past alerts** in **History**.
- ❑ Create **Alert Rules** for ANY **configured AI Engine** (see [Vaidio Core Setup Guide and applicable AI Engines guides](#) for configuration instructions).
- ❑ Send **alerts** via **email, HTTP/HTTPS, Vaidio Mobile App, or 3rd-party VMS/NVR**.
- ❑ Enable **AI Engines** before adding alerts.
- ❑ Update **alerts** if adding **new analytics** or **cameras**.

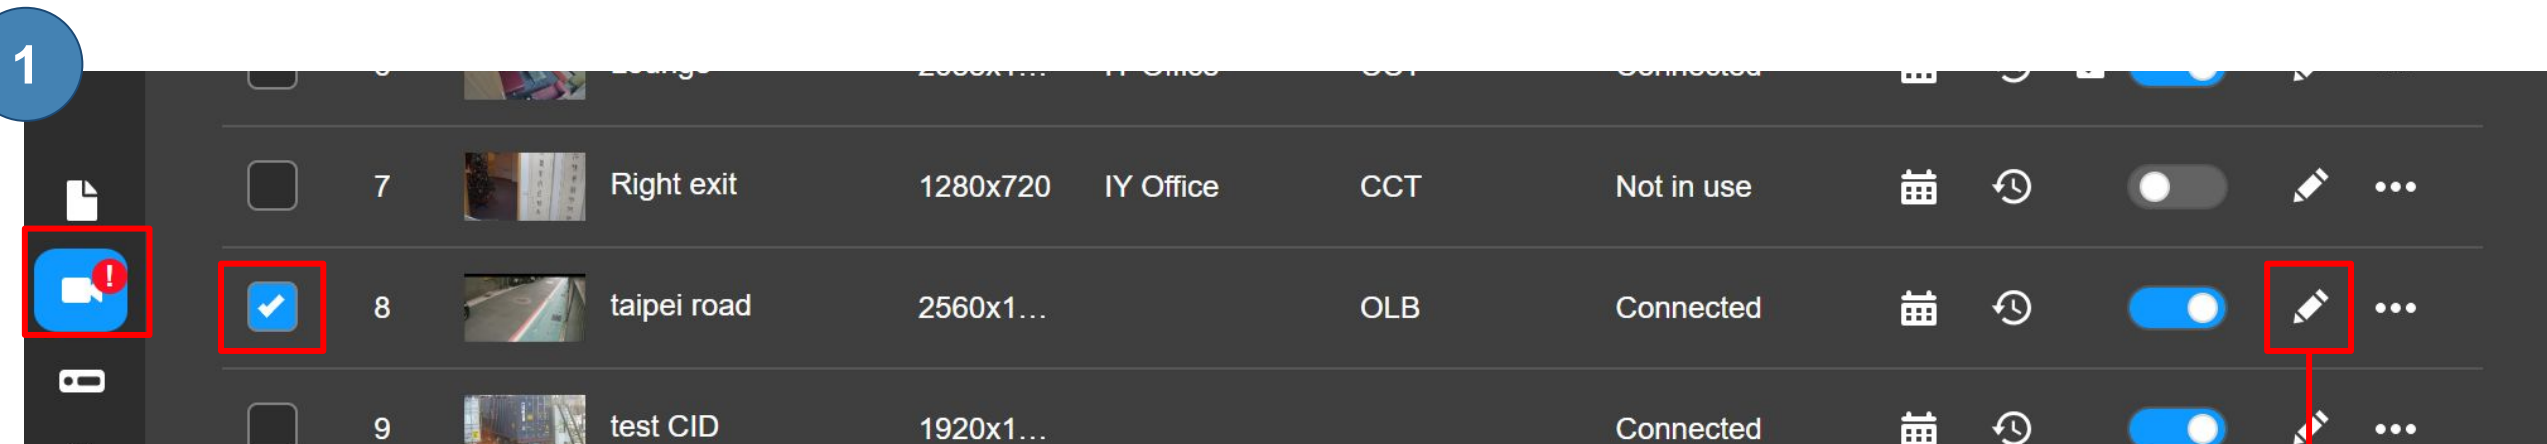

ALERT TYPES

Create alerts for the following analytics (in alphabetical order):

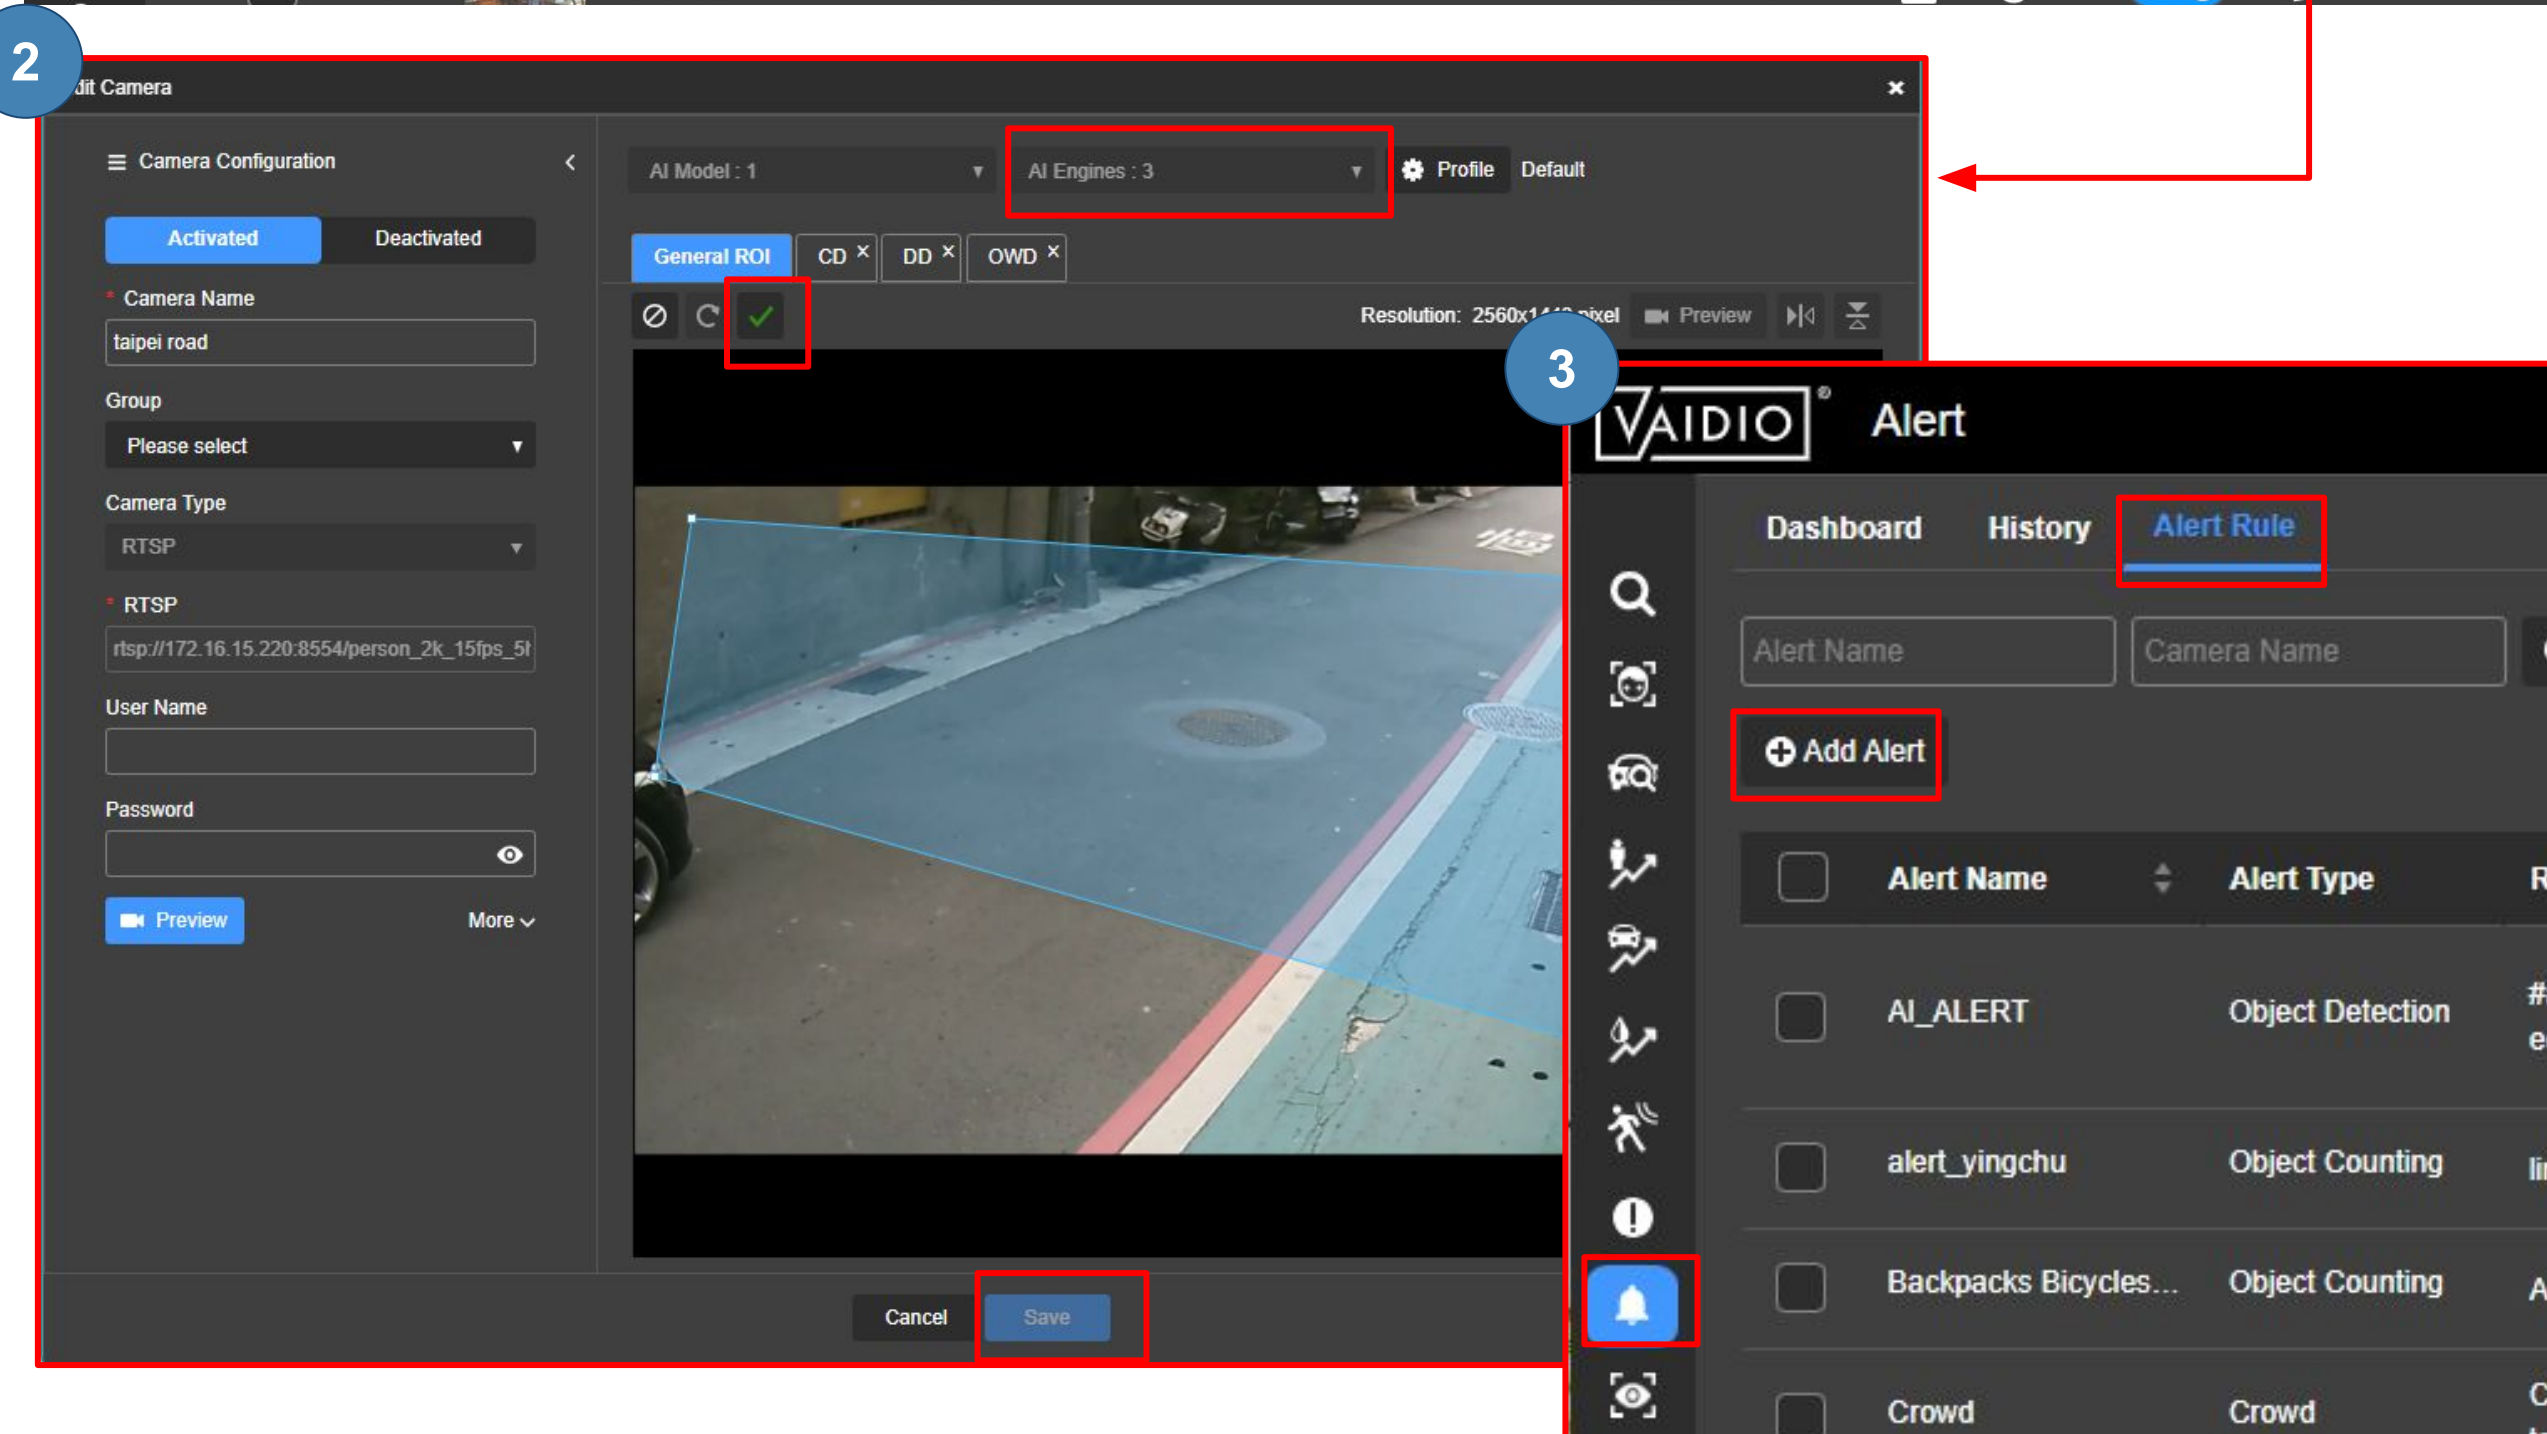

1. **Camera Abnormal:** Disconnected, Blurry/Blocked/Repositioned; Camera Resolution Change
2. **Crowd Detection:** Tracks large crowds (>30 people) in a camera field of view (FoV)
3. **Dwell:** Sub-engine of Object Tracking (OT) - counts how long a user-specified object type stays in the ROI and creates an event alert when a specified object type stays in the ROI for more/less than a user-defined time length
4. **Face Recognition:** Tracks when a person's face is in an existing list and/or not in any list (unidentified person)
5. **Intrusion Detection**
6. **License Plate Recognition:** Tracks when a vehicle license plate is in an existing list and/or not in any list (unidentified vehicle)
7. **Object Counting (OC):** Sub-engine of OT - applies when the number of a specified object type exceeds or is less than a specified value
8. **Object Detection (OD):** Detects all object types and attributes (e.g., color, quantity, etc.)
 - a. OD ROI is the General ROI
 - b. Set alerts for objects with/without others (e.g., forklift without person). See the [Object Detection User Guide](#) for details
9. **Object Left Behind (OLB):** Detects unattended objects in a defined area for a set time (1–3,600 seconds)
10. **Object Wrong Direction (OWD):** Sub-engine of OT - triggers an alert when an object moves in a user-defined direction, which may be incorrect or restricted
11. **Person Fall:** Tracks when a person lies down, crouches, squats, kneels, or is in other abnormal positions on the floor for more than 10 seconds
12. **Scene Change:** Applies to an anomaly in the field of view

ADD NEW ALERT

1. **Camera** > **Edit** to configure camera(s) for **Alerts**.

2. From the **AI Engine** drop-down menu of the **Edit Camera** screen, select/deselect **AI Engines** and draw an **ROI(s)**. Select the **checkmark** to complete ROI(s), then click **Save**.

3. From the sidebar navigation, select **Alert** > **Alert Rule** > Add Alert.

Return to [Alerts](#)

ADD NEW ALERT (CONT.)

The screenshot shows the 'Add Alert' dialog box with the following elements and callouts:

- 4**: Alert Name input field.
- 5**: Alert Type dropdown menu, currently set to 'Object Left Behind'.
- 6**: Camera selection area with a 'Camera' button and a 'Schedule' button.
- 7**: Cooldown Interval input field, currently set to 0, with a range of 0 ~ 3,600 seconds.
- 8**: Trigger (Optional) section, including a Trigger Action dropdown menu (currently set to HTTP) and a Params section with a Key input field.
- 9**: Save button.

4. Enter an **Alert Name**.
5. Select [Alert Type](#) from the drop-down and define rules for **object types** and **scenarios**. Include:
 - ☐ **Camera Abnormal Type** for Camera Abnormal
 - ☐ **List** for FR/LPR
 - ☐ **ROIs** for ID, OLB, etc.
 - ☐ **Line Sets** for OT
6. Select **camera(s)** and **ROI(s)**.
7. Optionally, [Schedule](#) alerts or set an optional **Cooldown Interval** (0 - 3,600 seconds).
 - ☐ A **Cooldown Interval** is the time between alerts.
8. Configure optional **Alert Triggers** to push the alert to an external device (e.g., Video Management System, mobile phone, etc.). See [Copy Existing Alert Trigger Actions](#) for information on copying **existing Trigger configurations** to newly created **Alerts**.
9. Click **Save** to enable the alert.

To reuse a configured alert trigger (e.g., email or HTTP trigger) for a new alert:

1. **Add Alert > Trigger (Optional) > Open Existing Trigger.**
2. Select a trigger by **Last Modified** date, **Alert Name**, or **Trigger Type**.
3. Click the **arrow** associated with the listed trigger for details.
4. Click **Apply** to assign the trigger.

ALERT DASHBOARD

Alert Dashboard:

Displays alerts received in real-time.

1. **Alerts > Dashboard.**
2. From the **Select Alerts** screen, filter by **Alert Name** or **Type**, select an **Alert Name(s)**, then click **OK** to display filtered events.
3. Select a **View** from the drop-down to display on the left-hand side of the screen (e.g., **Grid**, **Floor Plan**, **Live**, or **Map View**).
4. Select a **thumbnail** to view a [Detail Screen](#) screen that provides additional information on the event alert.

Alert Display Modes (Default: **Map View**):

- ❑ Grid View: Snapshot alerts, no map
- ❑ Floor Plan: Alerts on an indoor map (See [Vaidio Core Setup Guide](#) for map setup)
- ❑ Live View: Live feed of the selected camera

Alert History:

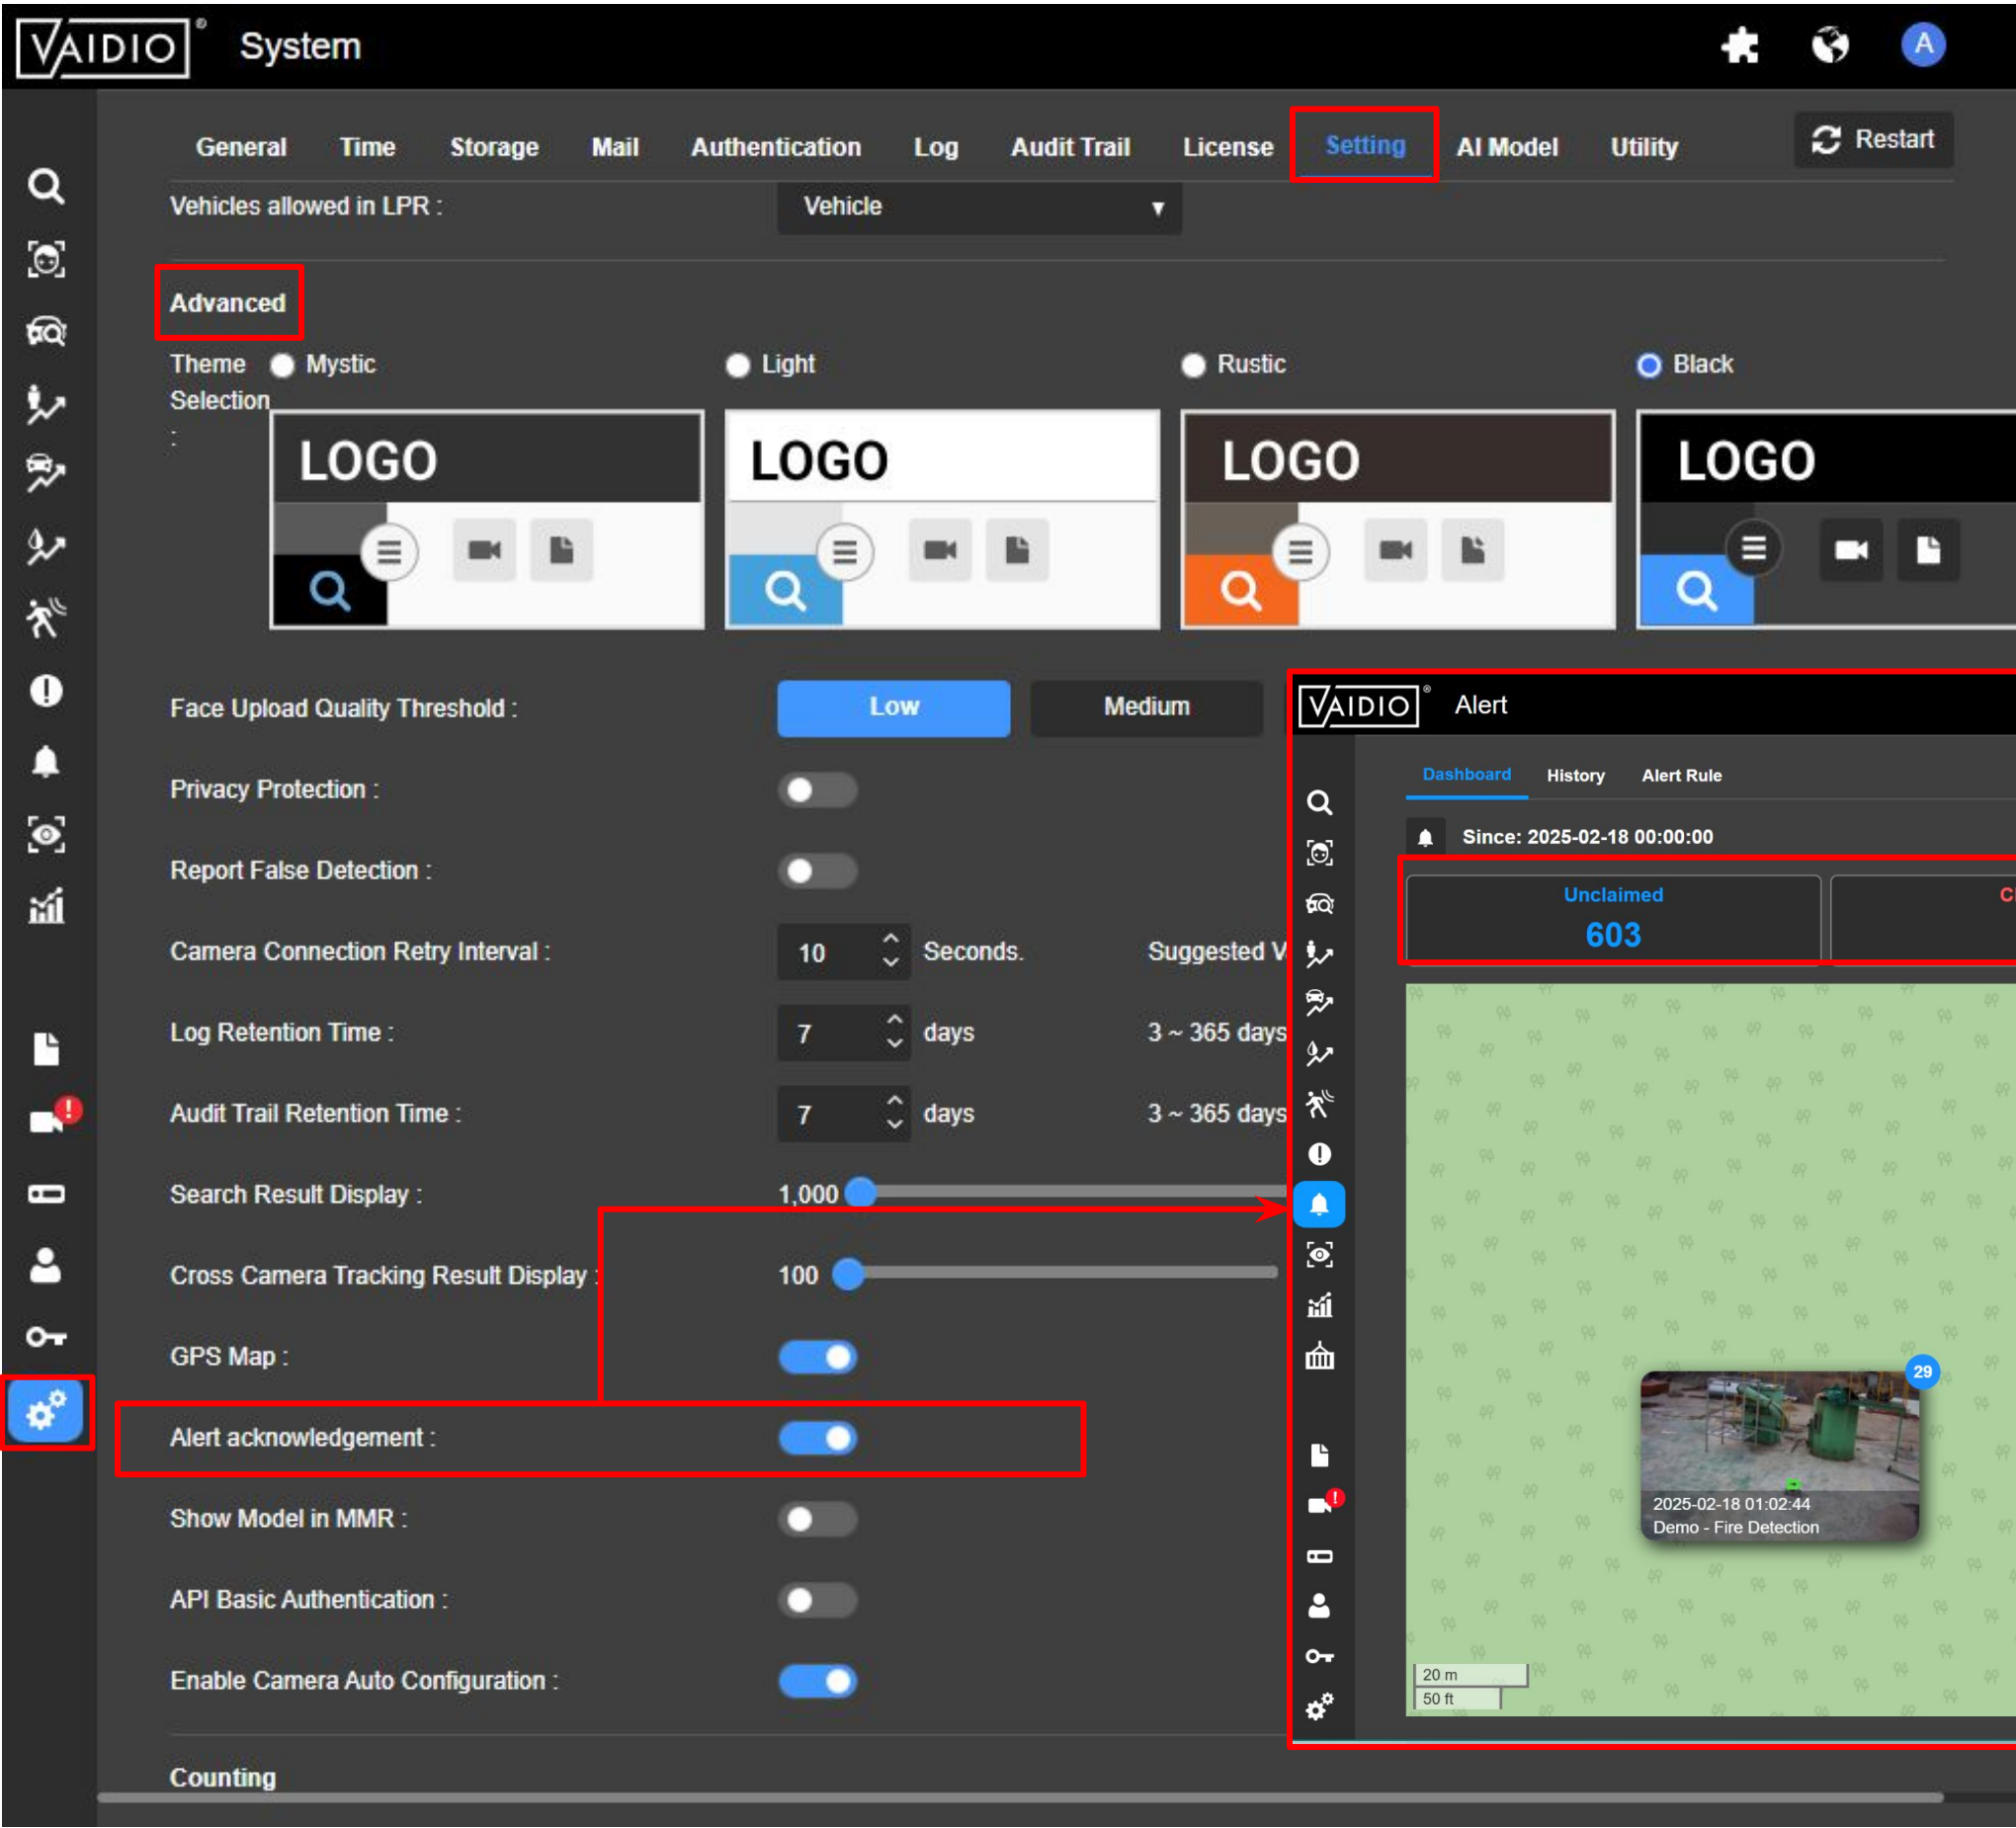

- Displays historical alerts.
- Users can filter by **date/time**, **Alert Name**, or **Type**, view details via selecting **thumbnails**, and export selected alerts to **.xlsx format**.

Note

See [Alert Dashboard](#) and [Detail Screen](#) for more information.

Return to [Alerts](#)

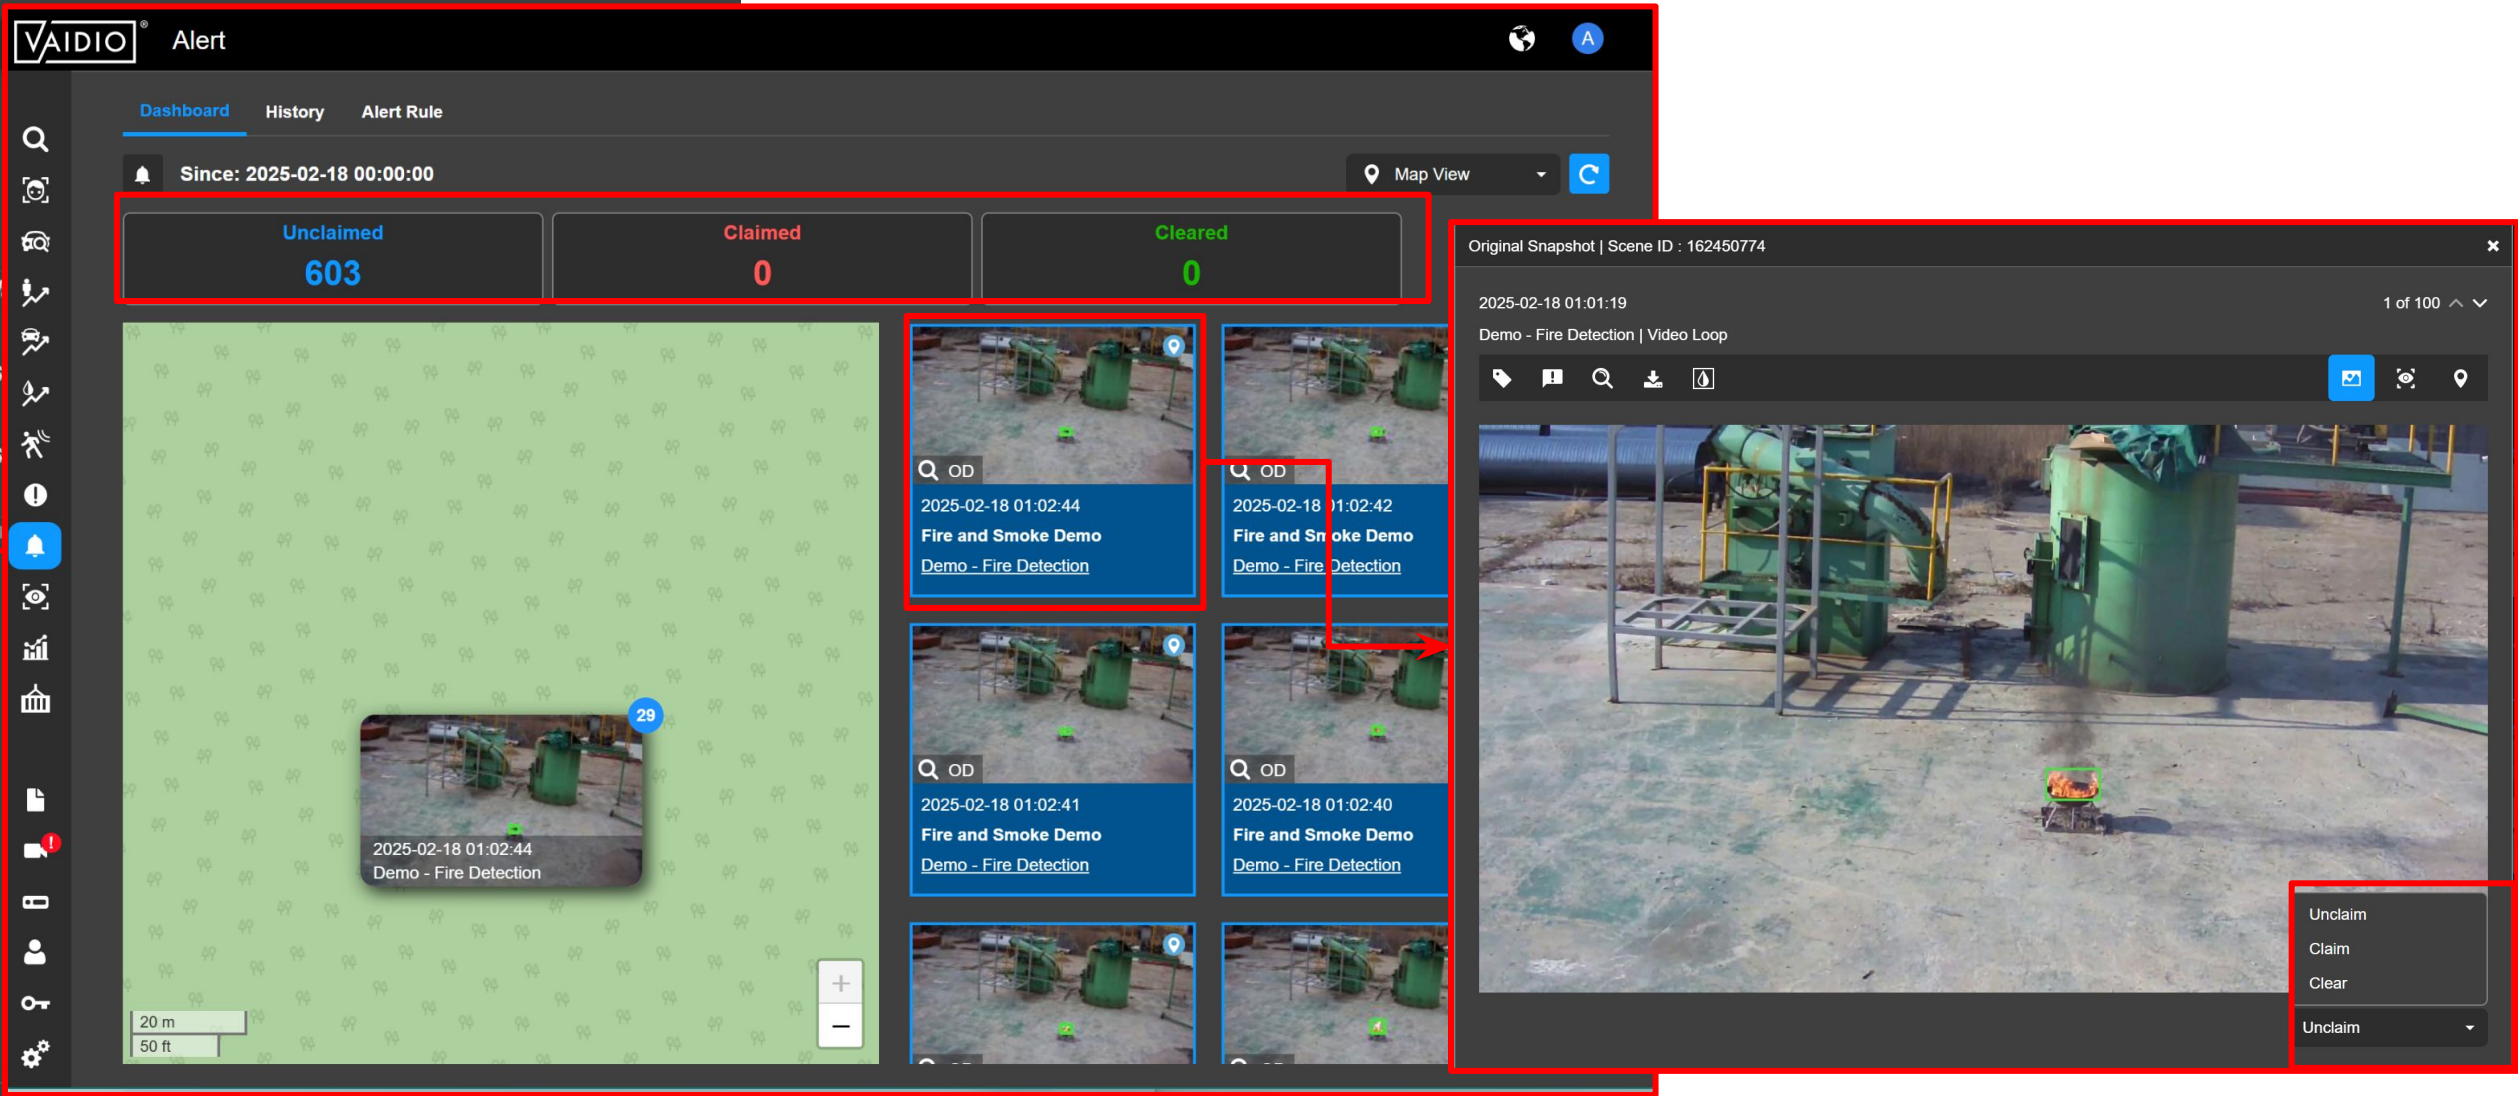

ALERT ACKNOWLEDGEMENT

Enable Alert Acknowledgement:

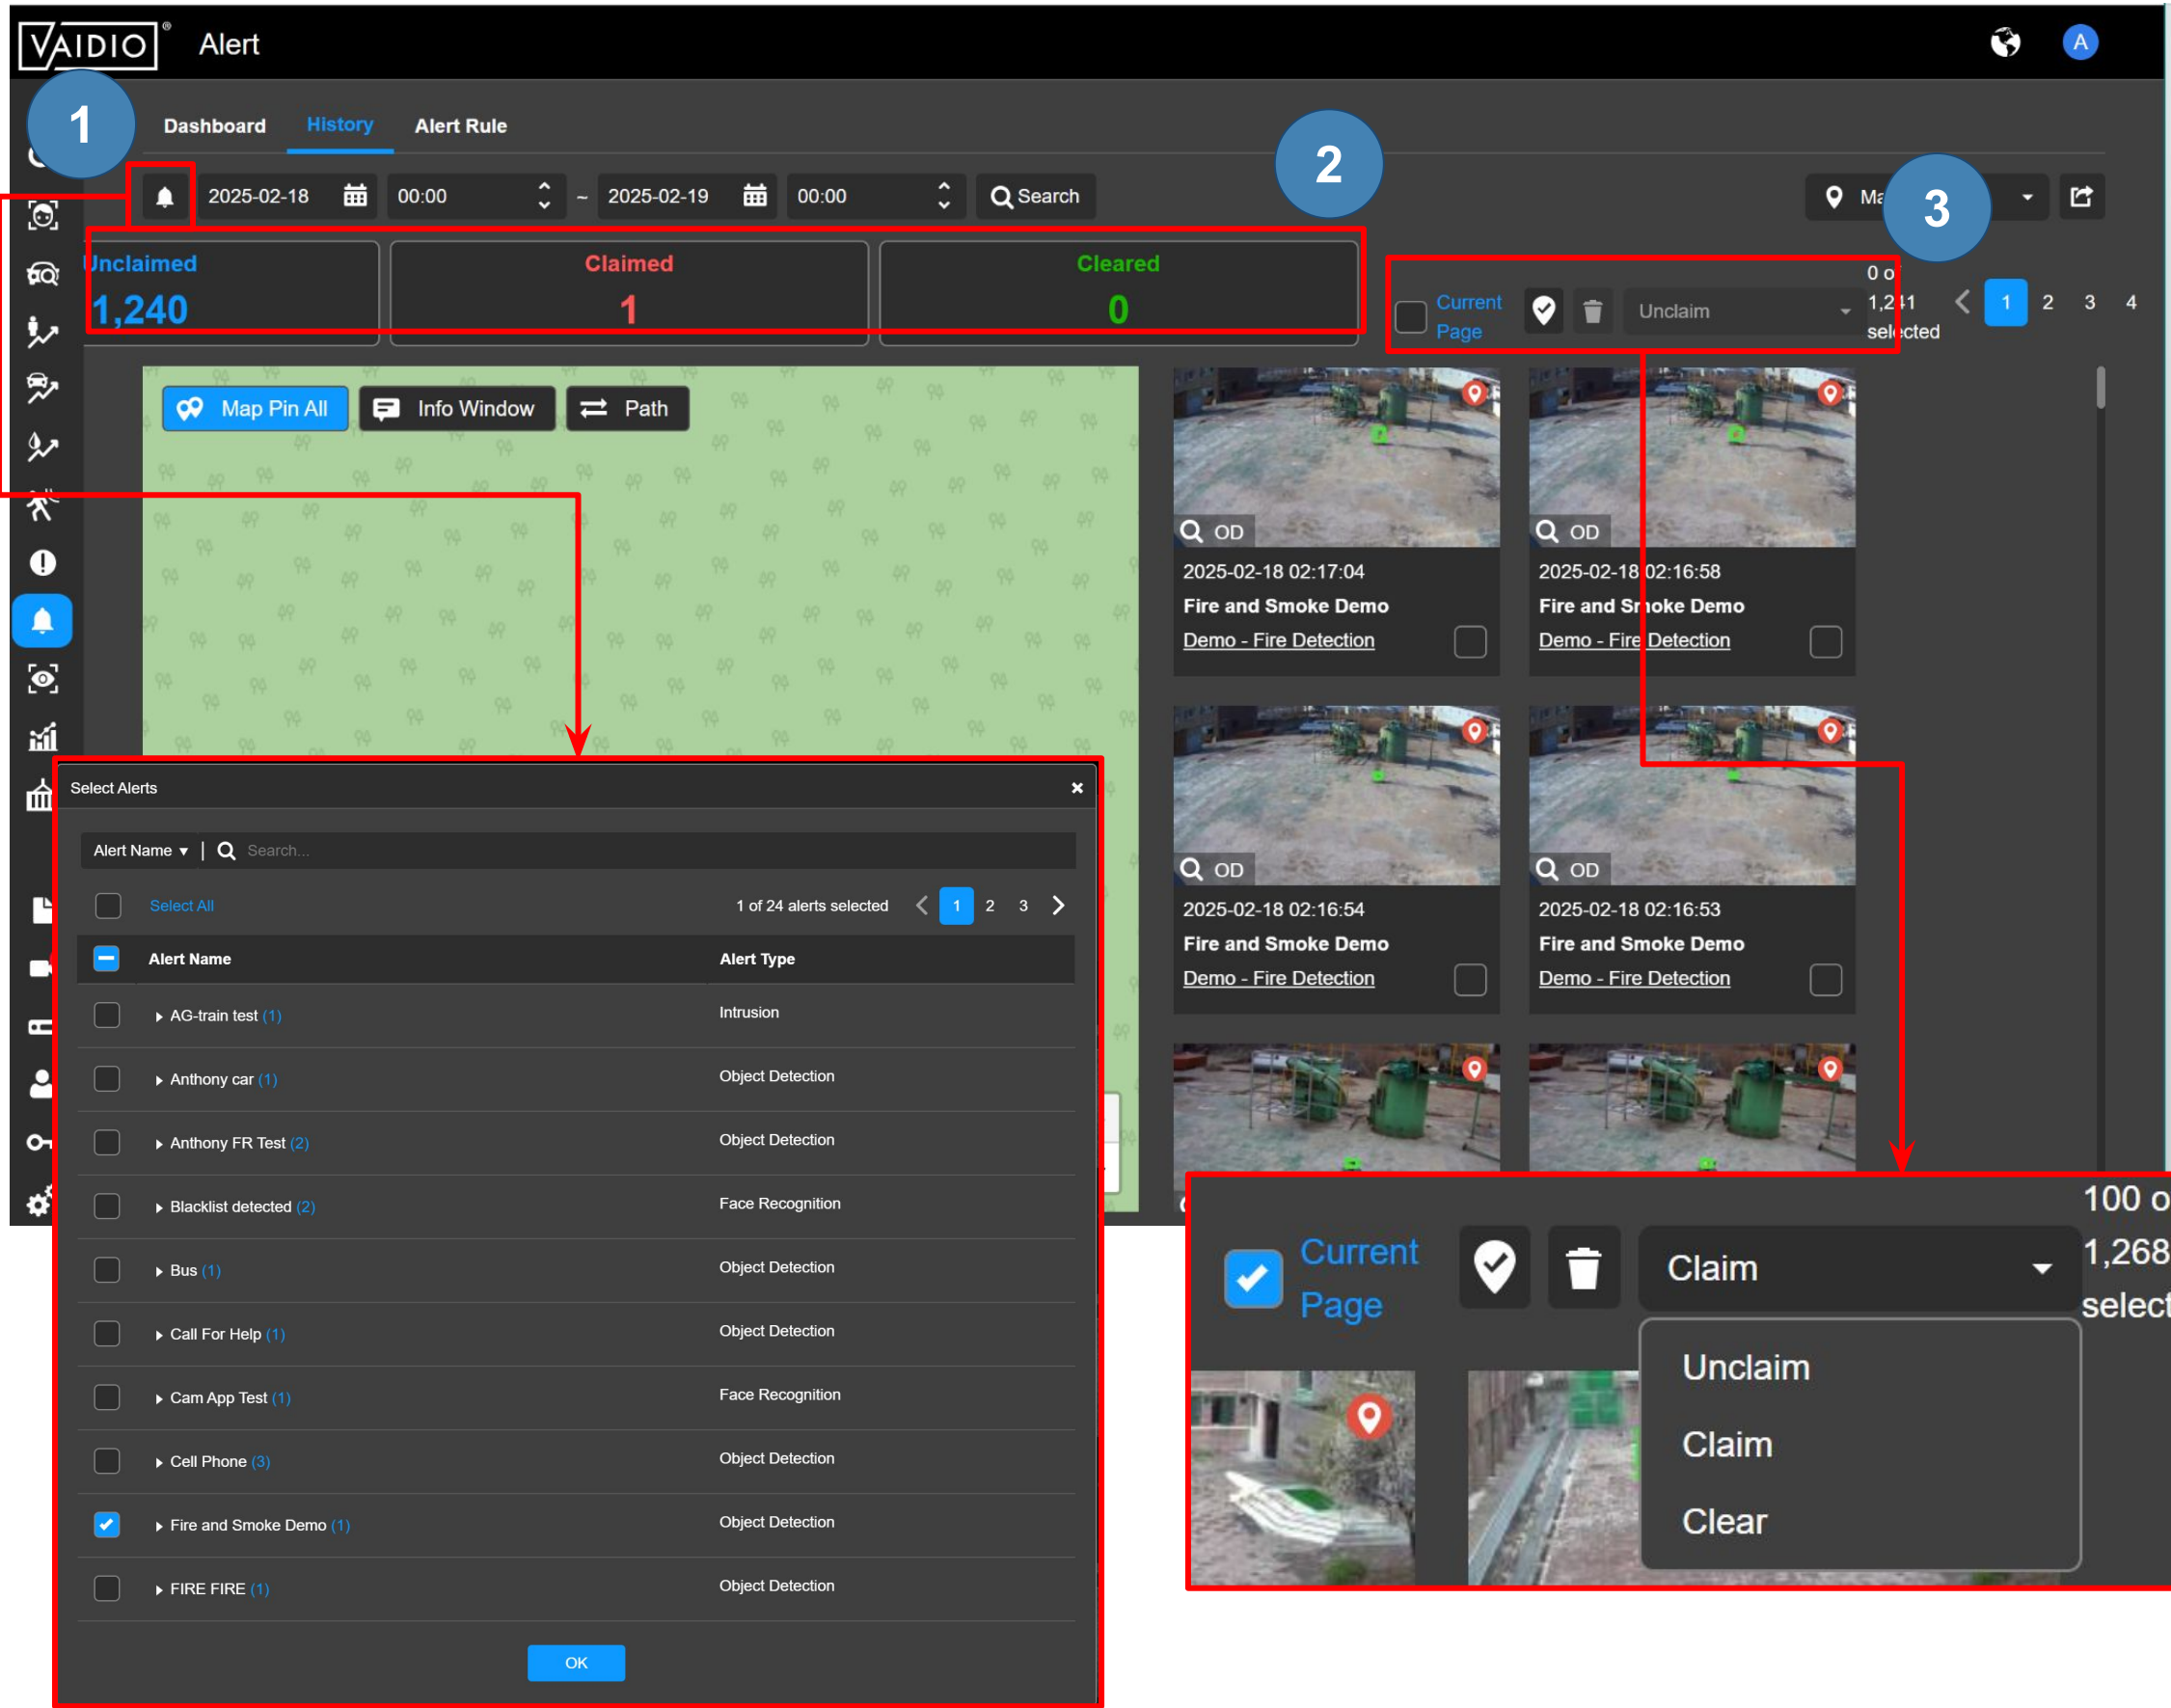

System > Setting > scroll down to Advanced > Toggle on Alert acknowledgement to view **Unclaimed, Claimed, and Cleared Alerts** from the **Alerts Dashboard/History** tabs.

Select a **thumbnail > Detail screen** drop-down menu to change the **Alert acknowledgment** status.

Return to [Alerts](#)

ALERT ACKNOWLEDGEMENT (CONT.)

1. From **Dashboard** or **History**, click **Select Alerts** to filter snapshots by one or more **Alert Rules**, then click **OK**.
2. Select **Unclaimed**, **Claimed**, or **Cleared** to filter snapshots by **Alert Acknowledgement** status:
 - a. **Unclaimed:** Alerts that are unread
 - b. **Claimed:** The user has acknowledged the alert and is aware of the situation
 - c. **Cleared:** Necessary actions have been taken to resolve the alert
3. Check the **Current Page** box, then select an **Alert Acknowledgment** category to apply to ALL alerts on the current page. Deselect individual snapshots if needed.

Return to [Alerts](#)

STATISTICS

-  [Overview](#)
-  [Heatmap](#)
-  [Demographics - Age & Gender](#)
-  [Demographics - Chart Types](#)

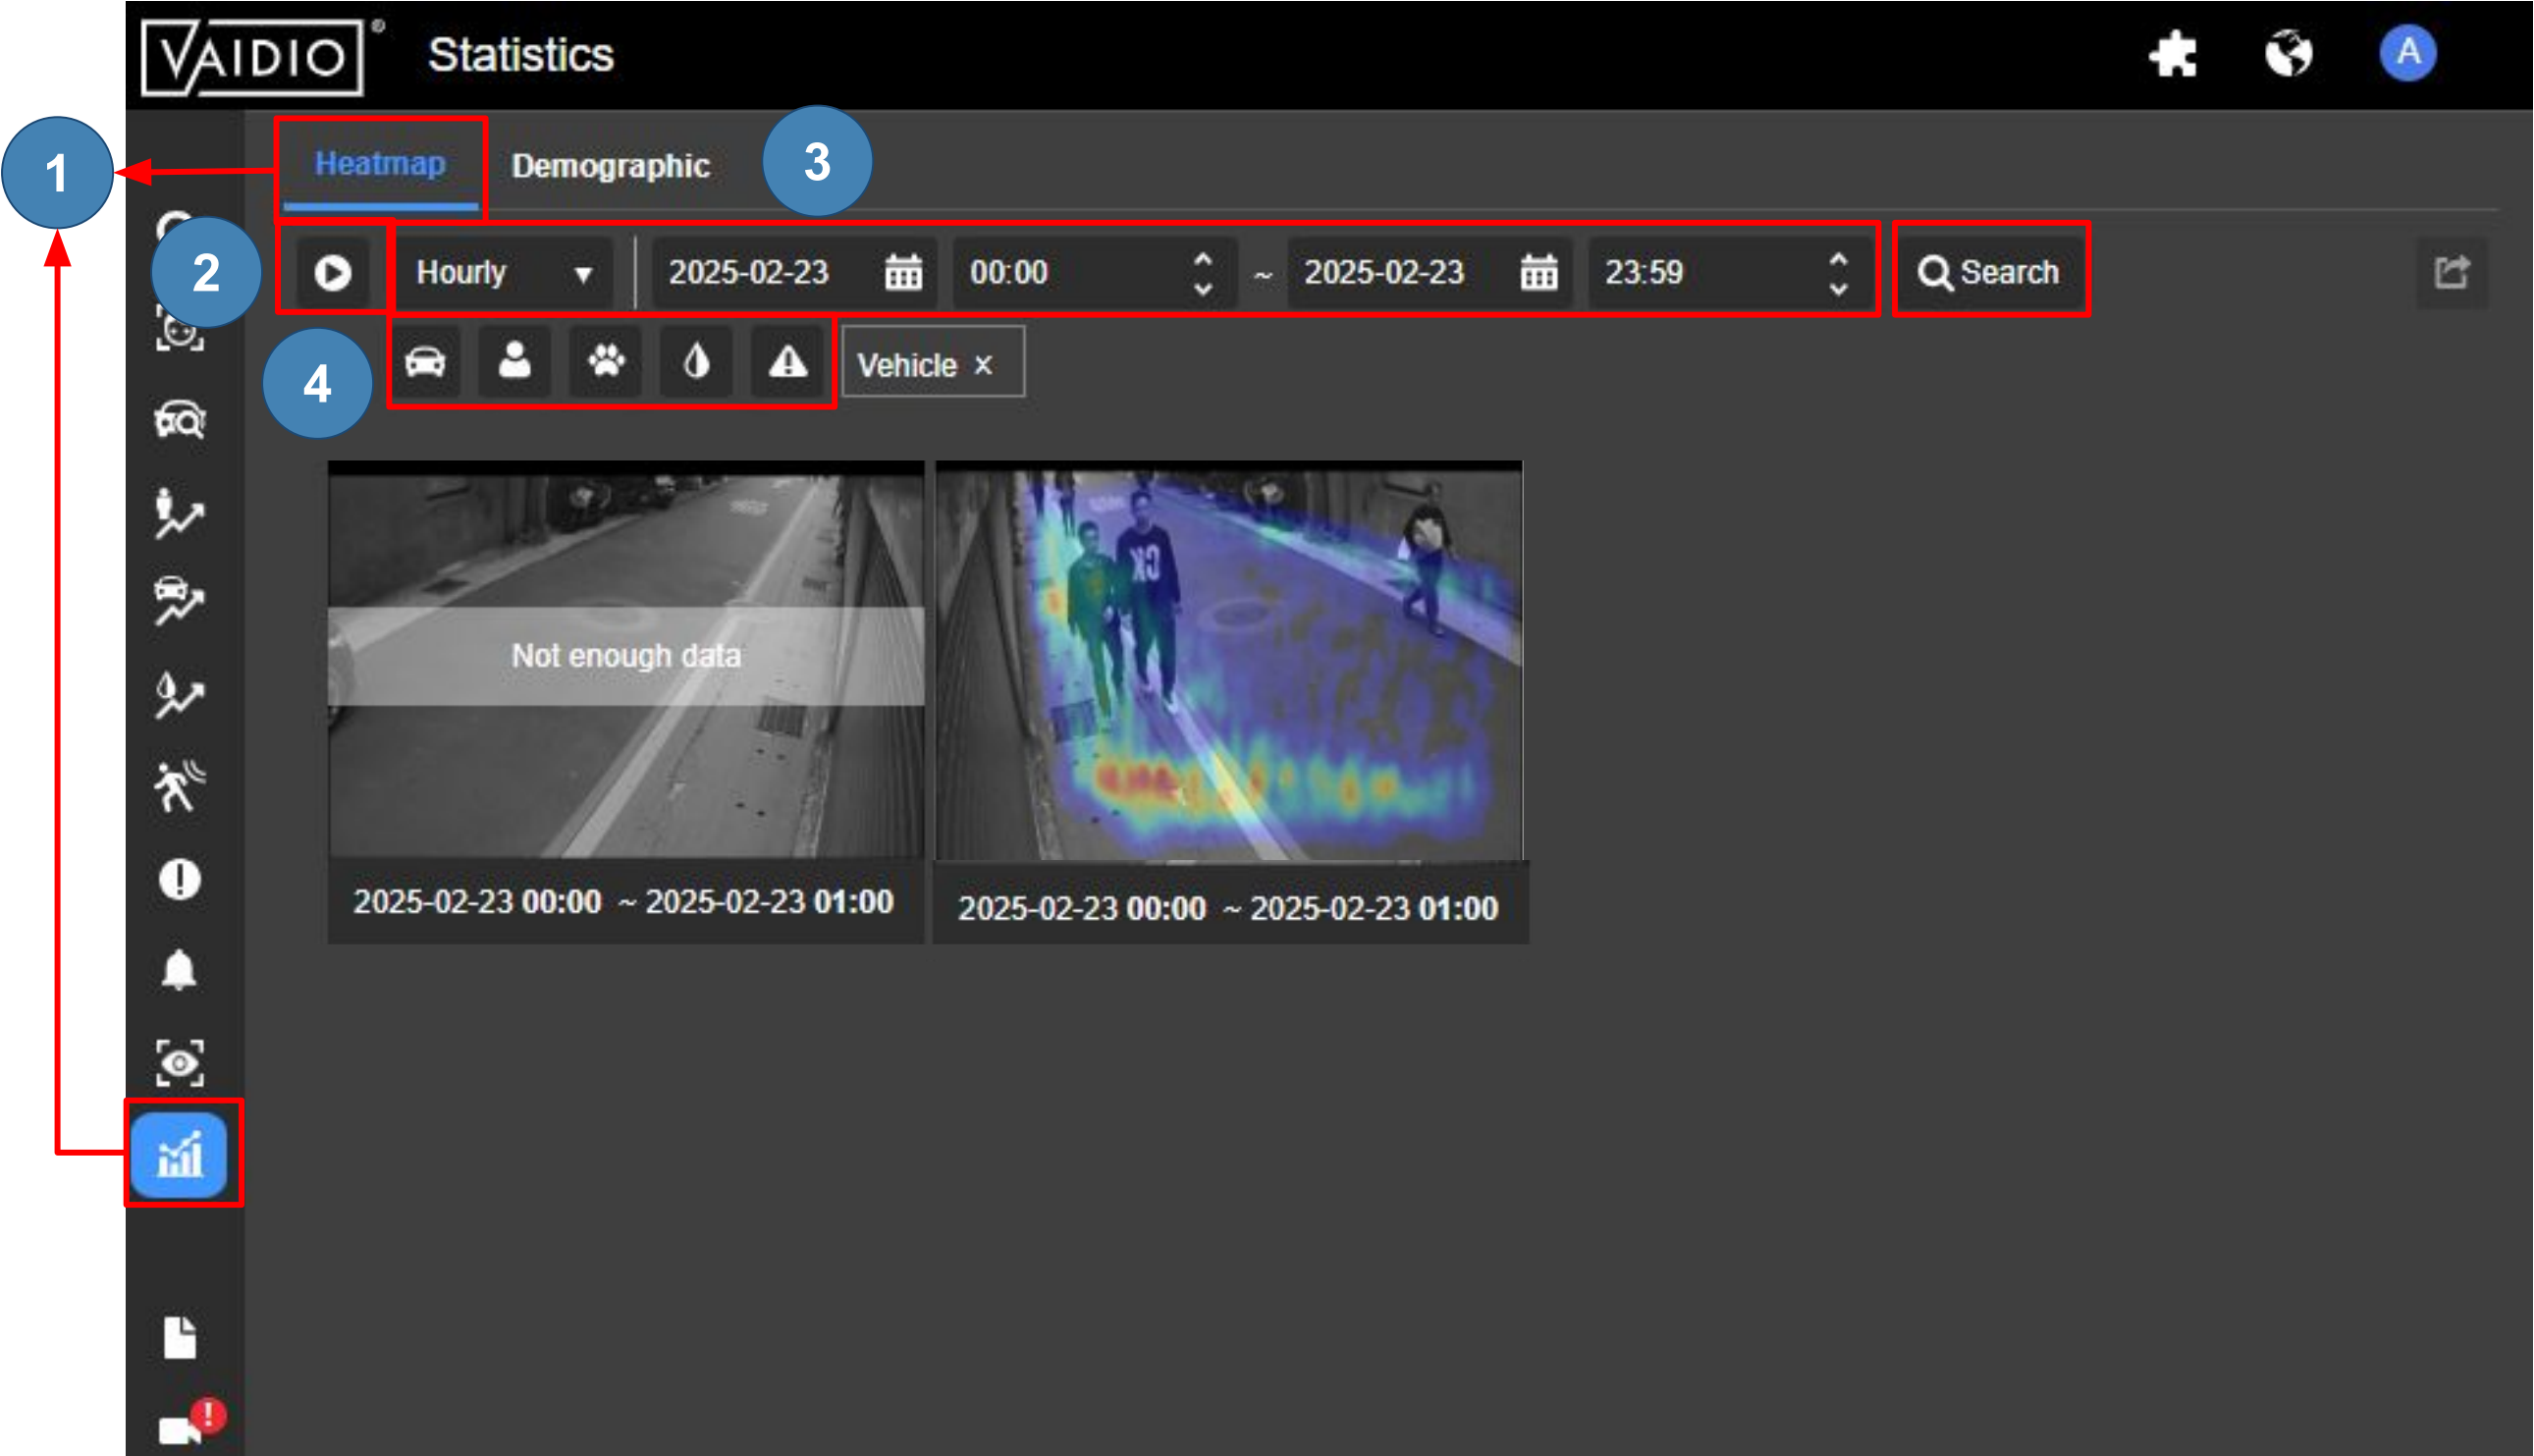

OVERVIEW

Video Core supports **heatmaps** and **statistics** for detection results.

- ❑ Heatmap: Visualizes object data from an AI model on one video source for up to **24 hours** (hourly or aggregate).
- ❑ Demographics: **Age & Gender** stats require a separate license (available with or without **Face Recognition AI**).

HEATMAP

Heatmap Function:

Generates heatmaps for selected object types over a **24-hour** period. Results display in the **Hourly** or **Aggregated** (one image per **24-hour** period) mode.

1. **Statistics > Heatmap.**
2. Click the **Play** icon to select a **camera** from a list of available cameras configured for **Heatmap**, then click **OK**.
3. Select from the drop-down menu, **Hourly** or **Aggregated** and select a **timeframe**.
4. Select one or more object types.
5. Click **Search** to display heatmap images.

Notes

- ❑ Selected object types display next to their icons.
- ❑ Select up to **five** object types.
- ❑ One video source per search (e.g., the real-time stream from a camera or an uploaded video).
- ❑ Videos should be longer than **one hour** for more accurate results.

Return to [Statistics](#)

DEMOGRAPHICS - AGE & GENDER

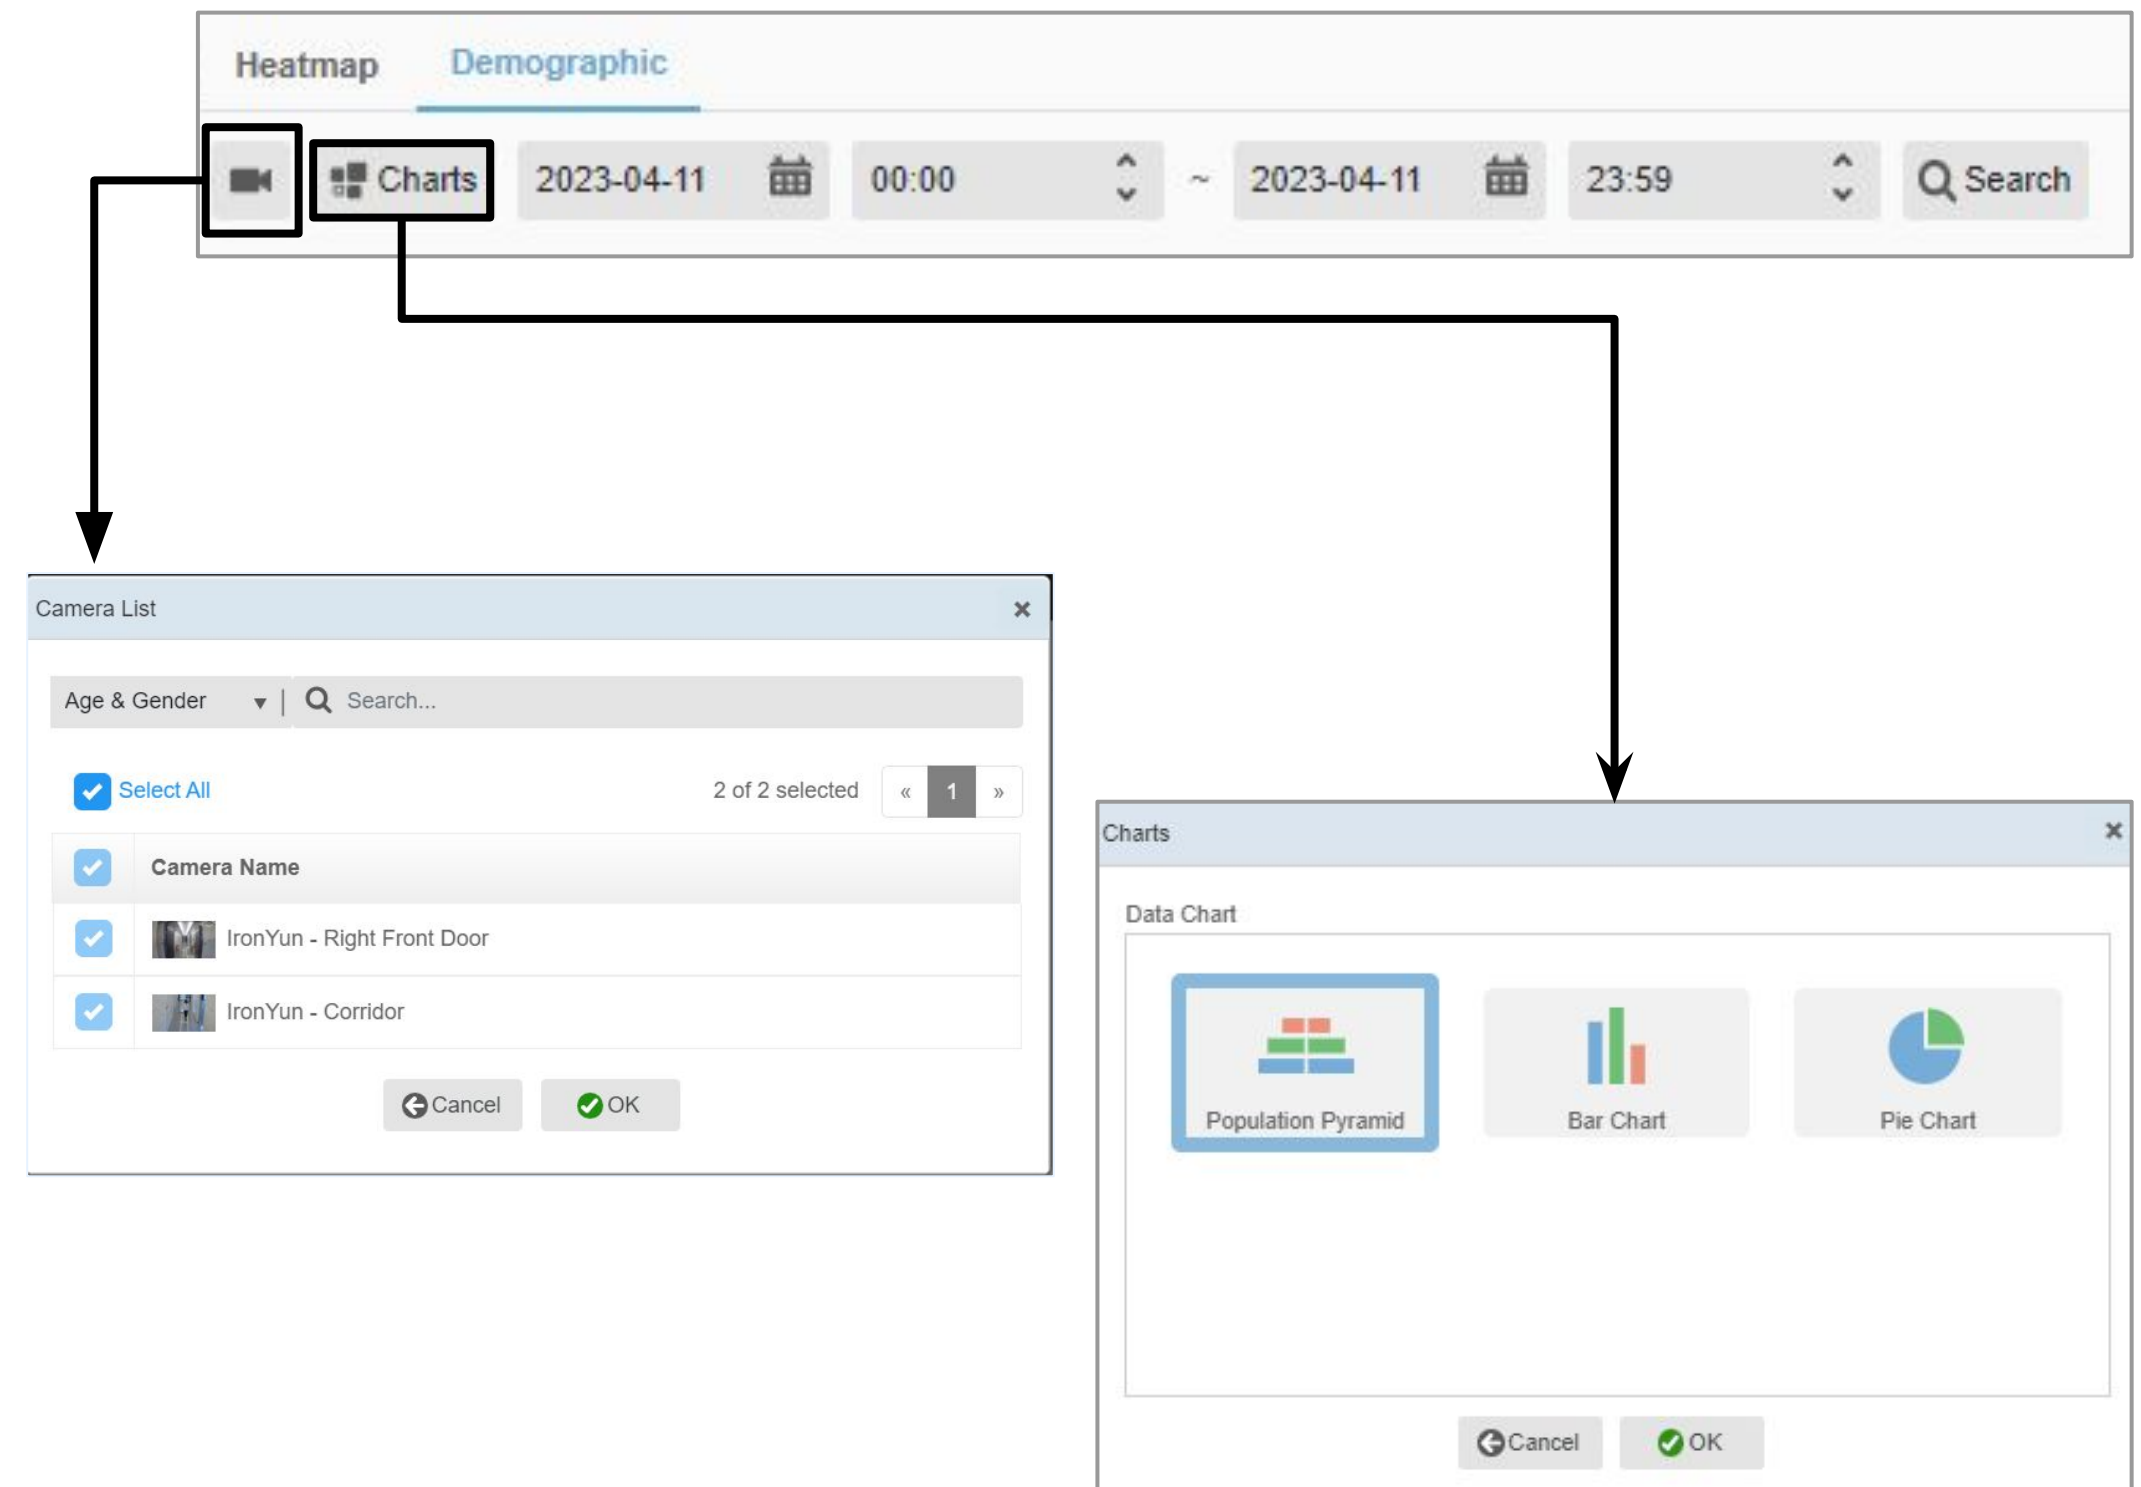

In **Statistics > Demographic**, select the **Camera icon** to select the **video source(s)**

- ❑ **Cluster:** Select Vaidio server(s) in network
 - ❑ **Default:** ALL Vaidio servers
- ❑ **Age & Gender:** Display all cameras with Age & Gender activated
 - ❑ Counts duplicates (i.e., the same person appearing in several frames is counted several times).
- ❑ **FR Age & Gender:** Display only cameras with both Face Recognition (FR) and Age & Gender
 - ❑ Counts fewer duplicates

Note

Demographic stats may have duplicates unless deployed at a choke point (e.g., check-in kiosk) with custom check-in software.

Return to [Statistics](#)

DEMOGRAPHICS - CHART TYPES

Navigate to **Statistics > Demographics** and click **Charts** to display **Age and Gender** statistics in **three** different **Data Chart** types:

- ☐ **Population Pyramid**
- ☐ **Bar:** Select either **Time** or **Camera** as the Data Source.
- ☐ **Pie:** Select either **Age** or **Gender** as the Data Source.

After making **Data Chart** selections and clicking **OK**, select a **24-hour timeframe**, then click **Search** to populate the selected chart.

LIVE VIEW

-  [Live View - Select & Sort Cameras](#)
-  [Live View - Map & Floor Plan Views](#)

LIVE VIEW - SELECT & SORT CAMERAS

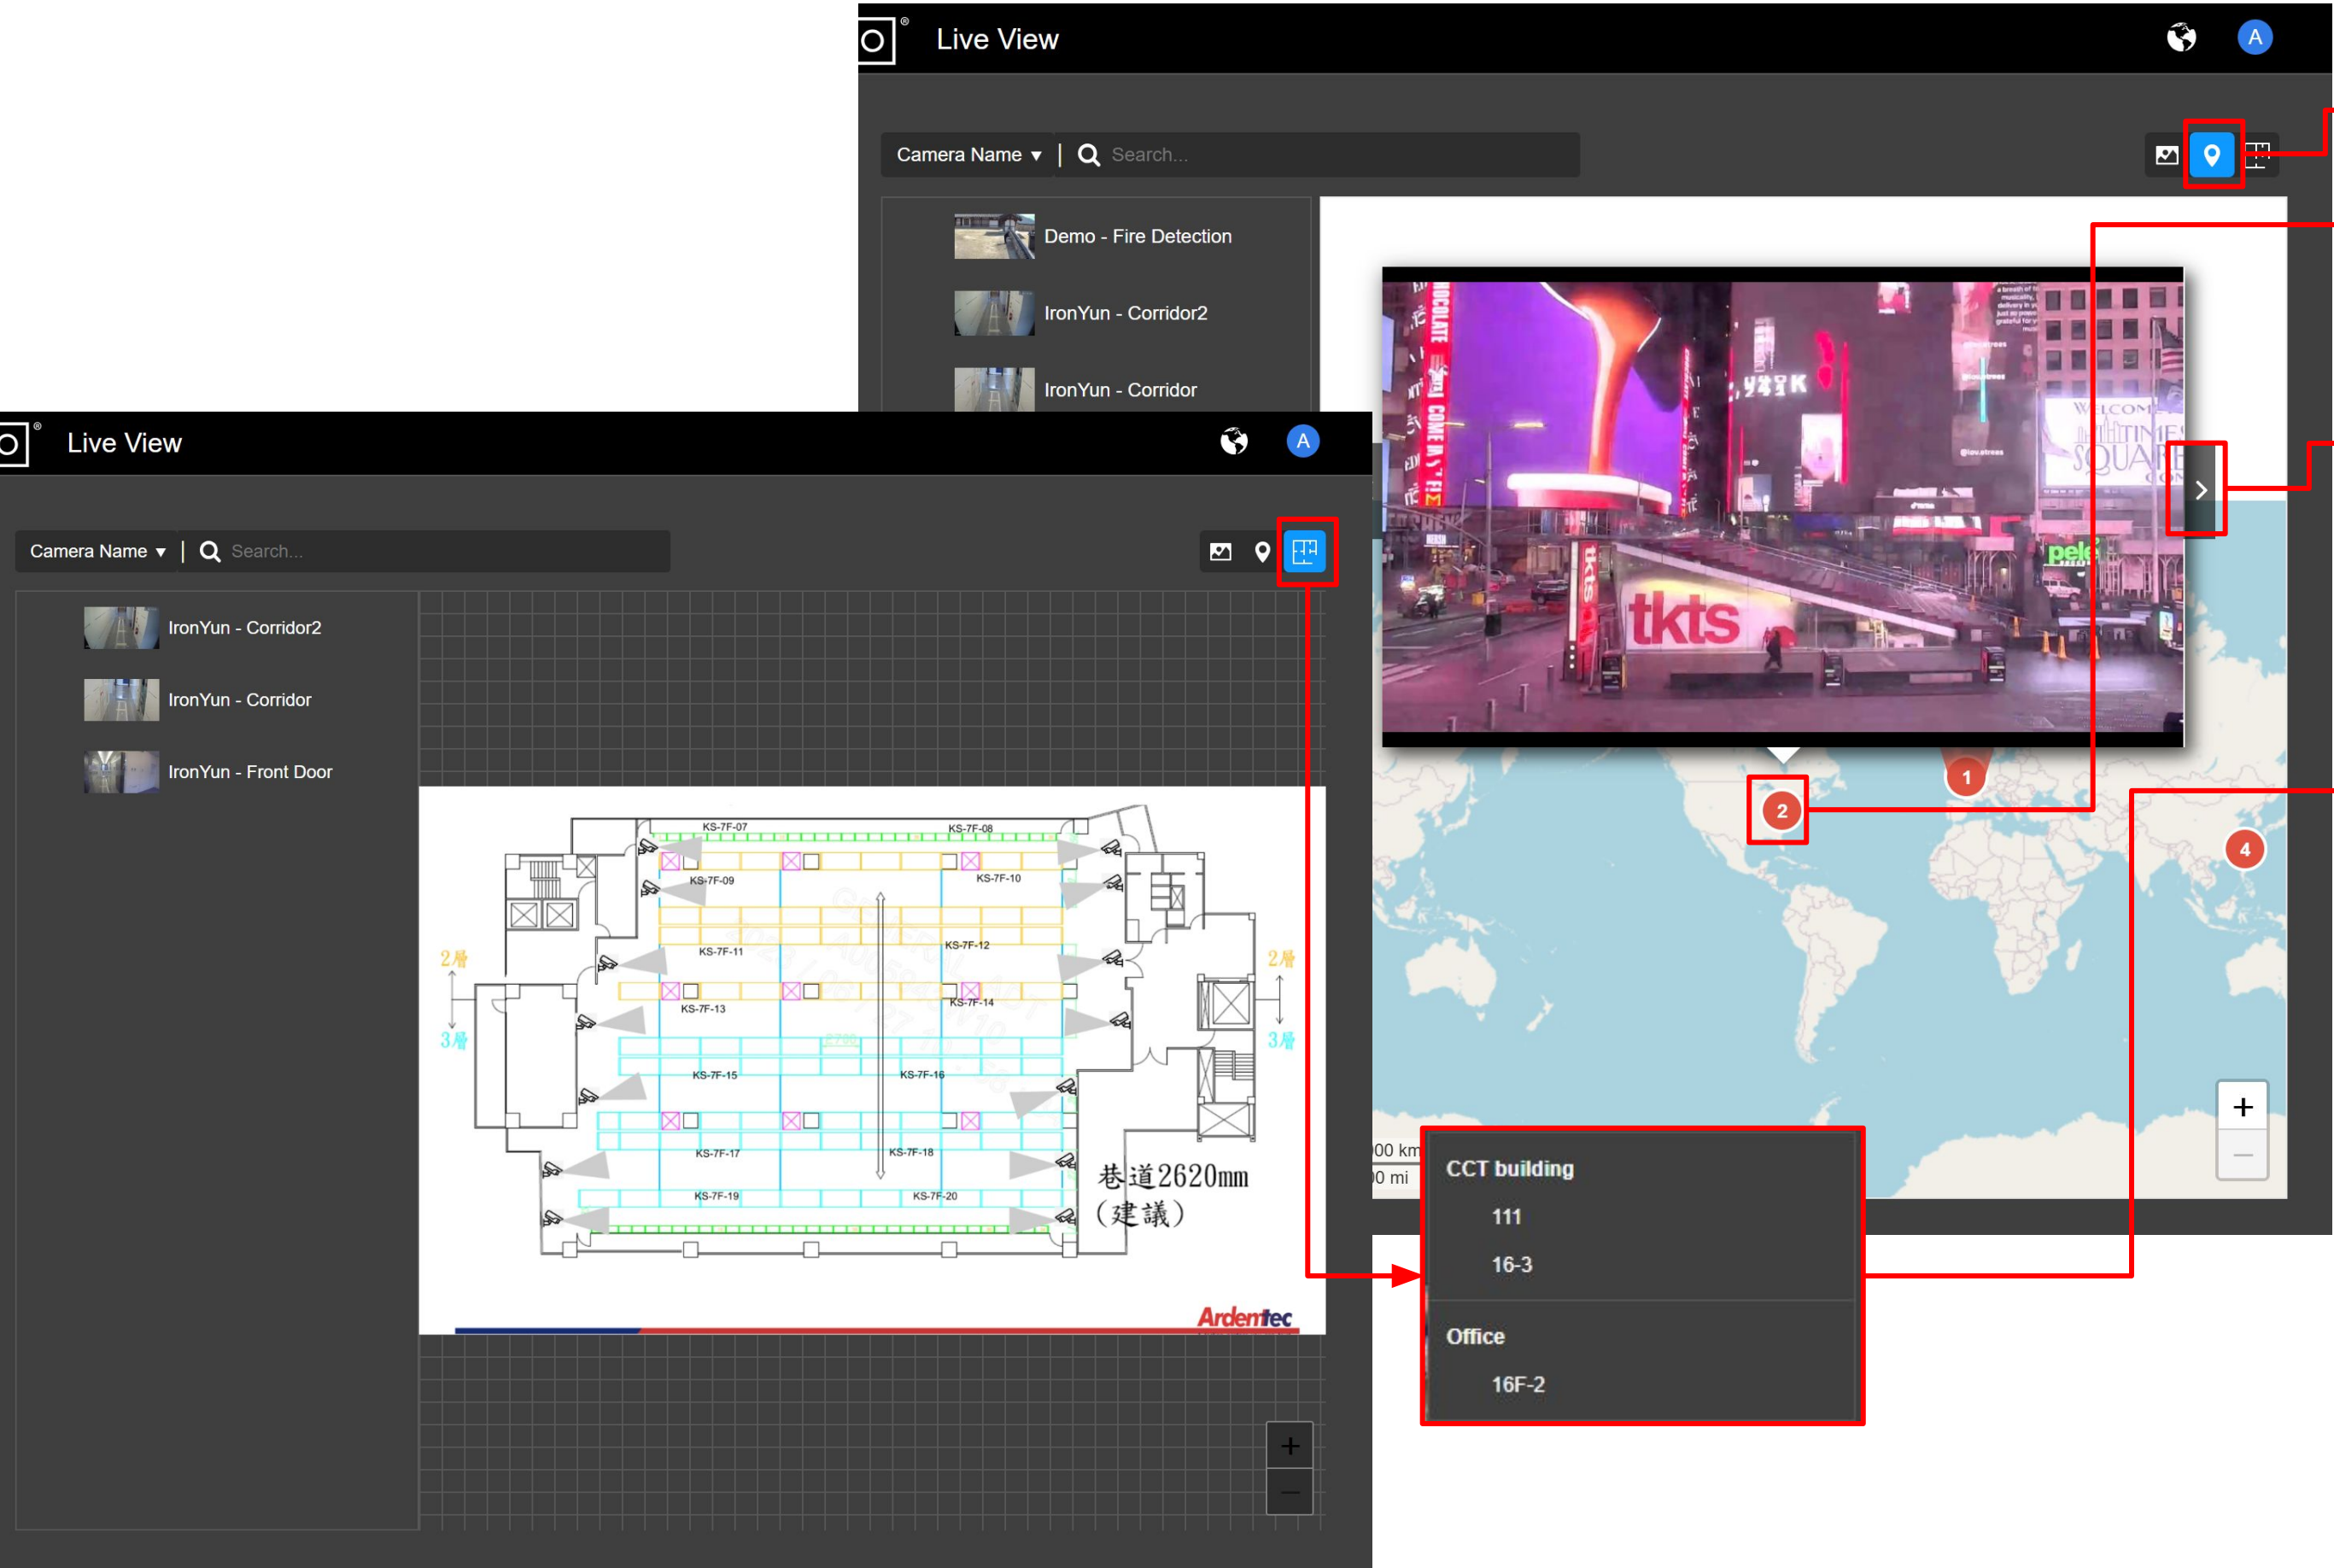

1. Select **Live View** to live monitor one or more cameras simultaneously.
2. Double-click or click and drag **cameras** to the right-hand side of the screen for viewing.
3. Click **Sort Pane** to organize camera views or **Clear Panel** to remove all selected cameras.
4. Select **Full Screen View** to view selected cameras in full screen.

Return to [Live View](#)

LIVE VIEW - MAP & FLOOR PLAN VIEWS

Map View:

- Select **Map View** to view configured camera **GPS locations** on a world map.
- Select a **number** on the map, which corresponds to the number of cameras at that general location, to view live camera streams.
- Click the **adjacent arrows** to view additional camera streams at that location.

Floor Plan View:

Select **Floor Plan View**, then from the drop-down menu, select an available **Floor Plan** for viewing.

Return to [Live View](#)

FALSE DETECTION REPORT

-  [Overview](#)
-  [Enable False Detection](#)
-  [Report False Detection](#)

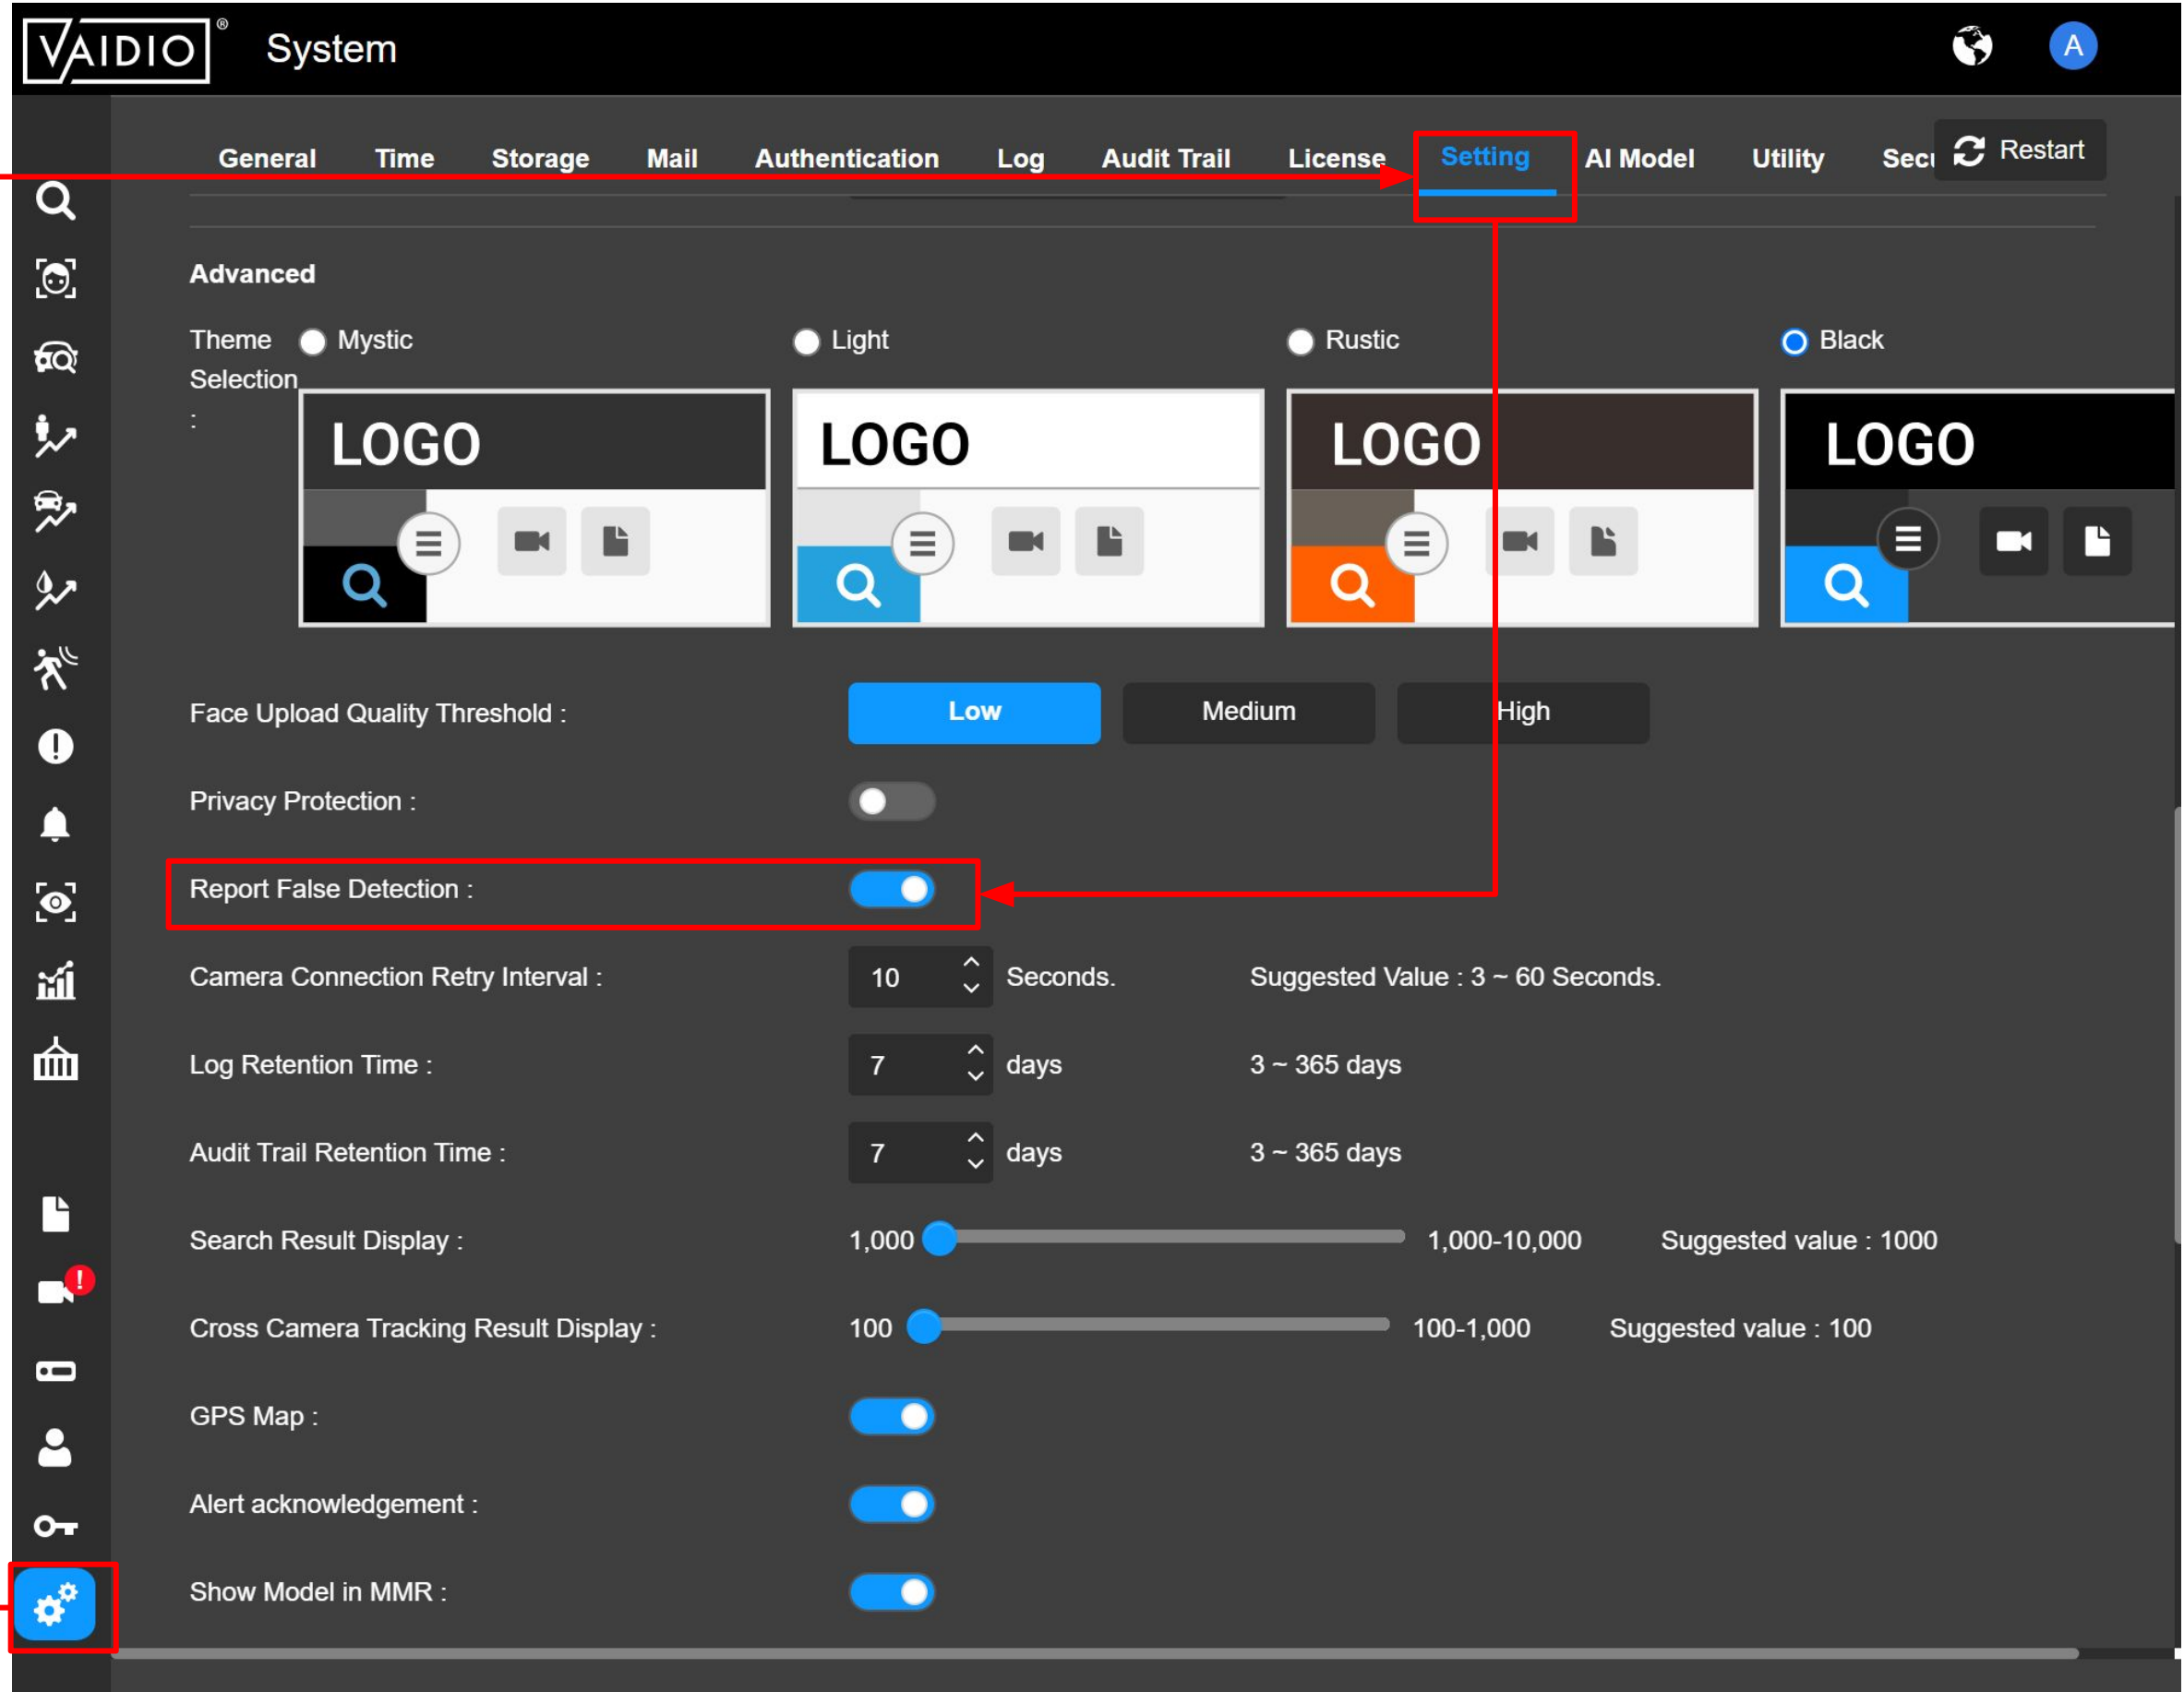

OVERVIEW

The **False Detection Report** helps improve accuracy by reporting **incorrect detections** to **Vaidio**.

- ❑ Applies to ALL analytics.
- ❑ Submit reports via the **Detail Page** in any dashboard (e.g., Search, LPR, Alert, etc.).
- ❑ **Internet connection** REQUIRED to send snapshots to Vaidio.

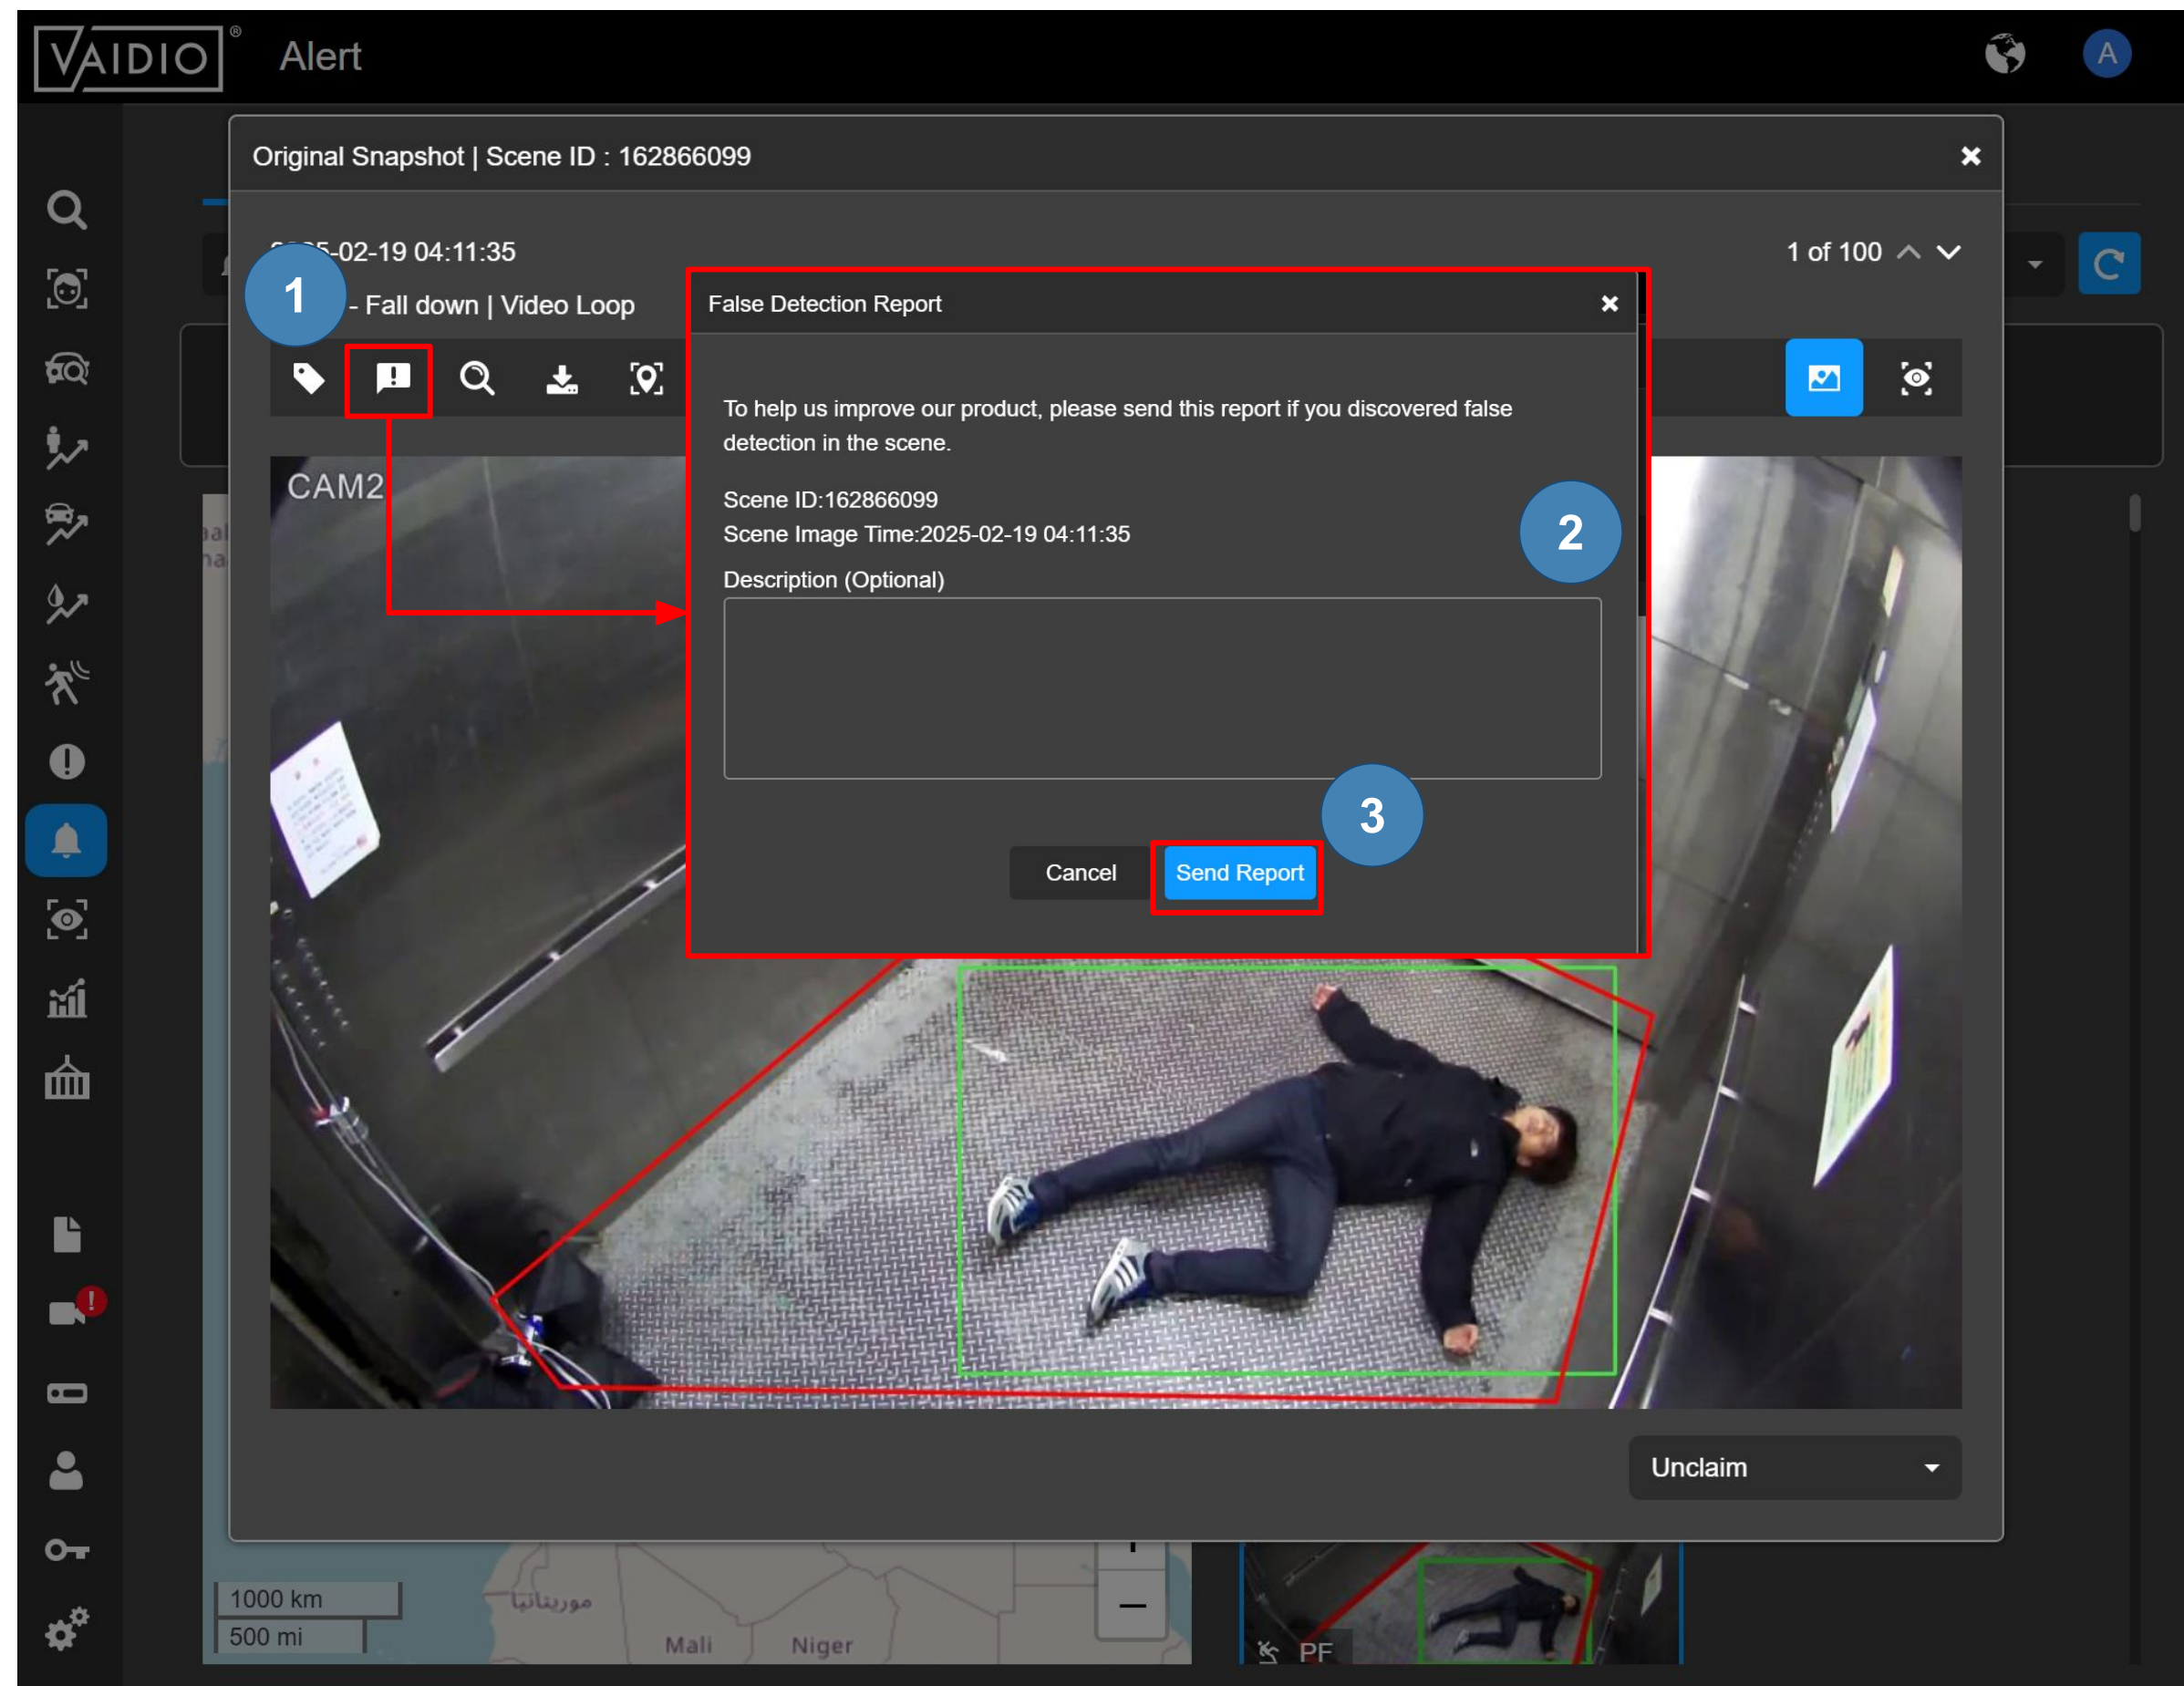

ENABLE FALSE DETECTION

To report false detection results, the feature must be enabled in **System > Setting > Advanced** section > **Report False Detection** and toggle **ON**.

Return to [False Detection Report](#)

REPORT FALSE DETECTION

1. From any **Detail Page** screen (e.g., Alert, Intrusion, Abnormal, etc.), click **Report False Detection** to access a **False Detection Report** popup.
2. Enter a **Description** of the false detection event (Optional).
3. Click **Send Report** to log the report.

Note

An **internet connection** is required to log **False Detection Reports**.

Return to [False Detection Report](#)
