## VACUETTE® VISIO PLUS Needle

Bringing Vision to  
Blood Collection

# VACUETTE® VISIO PLUS Needle

The **VACUETTE® VISIO PLUS Needle** with **optical venipuncture control** can make an important contribution to simplifying blood collection routine for phlebotomists.

The needle has a translucent plastic hub, which functions as a view window.

If venipuncture is successful, the view window is coloured red due to the blood flow.

The **VACUETTE® VISIO PLUS Needle** guarantees a safe blood collection procedure for the patient, whilst at the same time ensuring best possible comfort. Optical venipuncture control via the view window makes it much easier to find the vein lumen.

Re-positioning in the vein which may cause patient discomfort, can be avoided with the **VACUETTE® VISIO PLUS** venipuncture aid.

Perfected grinding technology allows for sharp needle tip and optimal tissue penetration.

To be able to differentiate from the **VACUETTE®** standard needles, the **VACUETTE® VISIO PLUS** blood collection needles have transparent needle containers.

**VACUETTE® VISIO PLUS** – the Greiner Bio-One innovation.
