Date

Managing Director

The European Centre of Foreign Languages QUO VADIS, founded in 2003, offers modern methods of teaching foreign languages according to international standards. In short time the QUO VADIS Centre became one of the most important providers of foreign languages in Moldova. From this point of view QUO VADIS staff tries to impose the highest educational standards among the foreign languages providers in our country, along with flexible course types and special interest courses for every taste and level. QUO VADIS's very own method, is a complete educational package, combining the very best in teaching and technology, to make learning a language faster, more personal and fun.

Sergiu Soltan

To Whom It May Concern**Letter of recommendation**

Lafarge Cement (Moldova) SA, member of Lafarge Group, is the largest construction material producer in the world, present in 62 countries in North and Latin America, Africa, Asia and Europe. Lafarge is present in Moldova since the purchase of Rezina cement plant in 1999. It has invested over 50 million Euro in modernization. Our company constantly brings to the market innovative and differentiated types of cements and a wide range of solutions and services to the clients in the construction industry.

Currently in Moldova is in full process of the approval of a set of laws and regulations on energy performance of buildings both at household level as well as in industry (construction, manufacturing, etc.). In this context, Lafarge Moldova, contracted in September 2012 the services of Mr. Dumitru Comerzan, promising expert in the field of energy efficiency.

With work experience in state governmental structures, responsible for energy sector development, Dumitru knows the entire process of elaboration and approval of the legislative framework and during his internships in Japan and Turkey, he has the chance to see the practical implementation of the legal framework in countries with a high developed energy efficiency sector. It is not insignificant that his university studies in the engineering field help him tackle the problems with a high analytical and technical precision.

Dumitru is currently involved in the following tasks of Lafarge Moldova:

- **Qualitative analysis of the draft law and regulation on energy performance of buildings developed by the Ministry of Construction.**
- **Develop a guide of construction materials, present on the Moldovan market and their combination with different insulating materials, in order to obtain the most effective alternatives in terms of cost, technical parameters, energy efficiency and the environment.**

The mentioned area is at an incipient stage and it is difficult to find specialized and trained staff. We have discussed the proposal for collaboration with Dumitru at the National Business Plan Contest 2012, where he participated and was awarded with special prize by Romanian Commercial Bank (BCR, part of Erste Group) for the most innovative idea (Energy Audit for Industrial and Residential Buildings).

Given that in Moldova, development of the energy efficiency sector is irreversible, it is necessary to have competent people with both theoretical as well as practical knowledge in the field, and at the same time with international experience of advanced countries that could be adapted for the development of the mentioned field in the Republic of Moldova.

We are sure in a fruitful collaboration with Dumitru, one of the first expert the this new field of science in Moldova.

Sincerely yours,

Stefan Birau
Strategy and marketing manager
