Implant Detection and Initialization

At the completion of the 30-minute Implant Detection period, Rate Profile Optimization is enabled; the appropriate pacing and sensing polarities are automatically selected by the device; Atrial and Ventricular Output Management is enabled and Amplitude and Pulse Width become adaptive. Sensing Assurance™ is enabled and Sensitivity becomes adaptive. Reduced VP™+ is enabled 60 minutes after Implant Detection is complete.

^a The atrial and ventricular Rate Limit is 200 min⁻¹ (± 20 min⁻¹).

^b Tolerance for amplitudes from 0.5 V through 6.0 V is ± 10%, and for 7.5 V is -20/+0%. Tolerances are based on 37 °C and a 500 Ω load. Amplitude is determined 200 μs after the leading edge of the pace.

^c User selection will not include 65 min⁻¹ or 85 min⁻¹.

^d Conducted AF Response is functional during Mode Switch episodes, DDIR, WVIR and VDIR modes.
