

April 2020

To whom it may concern

The Intersurgical range of breathing filters have been designed for the protection of the patient, breathing system and equipment. They have been independently tested and proven to be highly efficient at preventing the passage of bacteria and viruses. The construction of the filter medium is designed to be bi-directional and prevent the passage of bacterium and viral species when challenged in either direction.

I hope you find this information of interest but if you require any additional clarification, please do not hesitate to contact me.

Yours Sincerely

Sean Duggan
Anaesthesia & Filtration Group Product Manager
