Pulmo-Protect™ lung function filter

[Home](#) > [Intersurgical products](#) > [Airway Management](#) > [Breathing Filters](#) > [Breathing filters](#) > [Pulmo-Protect™ lung function filter](#)

Pulmo-Protect™ combines low resistance with a high bacterial and viral efficiency filter designed specifically to protect the patient and equipment during lung function tests.

Pulmo-Protect™ provides:

- Protection to pulmonary function test equipment.
- High filtration properties reduced risk of contamination between patients.
- Low resistance performance ensures efficiency of results and complies with ATS/ERS recommendations¹.
- Low functional volume.
- Microbiological filtration effectiveness has been independently tested and validated to provide >99.999% efficiency against bacterial and viruses²
- Flexible, comfortable, disposable mouth piece helps with patient compliance and improve the effectiveness of the test.
- Comfortable single patient nose clip prevents patient-to-patient touch contamination.
- High filtration properties reduces risk of contamination between patients.
- Device compatible range of colour coded filters available individually or as a complete pulmonary function test kit.
