Infrastructure

Situated on 180 acres of land and built over a 300,000 sq.ft. area, Meril's ISO 13485 & cGMP certified ultra-modern manufacturing facility is constructed to satisfy the stringent needs of our cardiovascular, orthopedics, diagnostics and endo-surgery businesses, as well as our R&D endeavors.

Fully integrated manufacturing systems ensure backward integration, flawless man-material movement and complete control over processes to eliminate production errors. All manufacturing and sterilization processes are conducted in-house, in addition to the analytical and microbiological QA/QC tests required to meet the world-class production standards.

Meril Park, Vapi

Talent

Meril's 3200+ personnel are a strong, experienced team comprising designers, engineers, chemists, microbiologists, regulatory affair experts, R&D scientists, clinical affairs experts, legal, finance, sales and marketing professionals with innovative capabilities. The team is continuously striving towards improving and saving lives every day by providing revolutionary solutions for diagnosis, prevention and treatment.

Currently Meril has direct sales & representative offices in India, Germany, Turkey, USA, China and Brazil, and a strong distribution network spread over an additional 102 countries in 6 continents.

Meril Academy

While innovations and advancements in medical technology play a vital role in contributing to the betterment of a healthy society, a larger role also lies in educating and imparting practical training to doctors, clinicians and other members of the medical fraternity. This initiative will help bridge the gaps between the available technology, its adoptions and its implementation for superior patient care.

Also, to add value to medical professionals and young medical interns, Meril Academy functions as world class institution. Spread over a massive area of 200,000 sq. ft. and surrounded with lush, green natural beauty, Meril Academy is situated at the Meril headquarters in Vapi.

Meril Endo-Surgery

In line with the objective to design and develop novel, clinically relevant, state-of-art surgical devices, Meril is expanding its endo-surgery franchise. At Meril, we strive to create and develop products through innovative thinking, cutting edge technologies and collaboration with medical professionals and healthcare organizations, with an aim to identify clinical needs and translate them into market-leading solutions.

Meril's vision is to become a 'one-stop' solution for surgeons by providing them with an extensive product portfolio comprising absorbable & non-absorbable surgical sutures, tissue sealants, absorbable hemostats, hernia repair meshes, intra uterine devices, energy devices and mechanical closure devices.

Wound Closure

Wounds which do not heal naturally are treated with wound closure devices. The affected tissues need to be kept in opposition until the healing process provides the wound with proper strength to stand against the stress without any assistance. A wound can be treated with the help of various devices such as sutures, staplers, topical adhesives or clips. Different tissues have their own unique functions and requirements. When one decides on a particular wound closure device, one must take care of the healing needs of the particular tissue which is being treated.

The most common device used for wound closure is suture. Sutures, in general term ‘stitches’, are sterilized surgical threads, which are used to ligate blood vessels or to approximate tissues.

Sutures are generally categorized as:

- Absorbable and Non-Absorbable
- Natural and Synthetic
- Monofilament and Braided

Absorbable sutures have a tendency to degrade as the wound heals. Non-Absorbable sutures oppose the body’s efforts to dissolve them. On complete healing of the wound, surgeons remove the non-absorbable sutures. Meril Endo-Surgery has a wide range of synthetic absorbable sutures which are made from Polyglactin 910 (MITSU family), Polydioxanone (FILAXYN), Poliglecaprone 25 (FILAPRON), Polyglycolic Acid (MEGASORB family) as well as non-absorbable sutures which are made from Polypropylene (FILAPROP), Polyamide (FILAMIDE) and Polyester (MERICRON XL). In natural absorbable sutures, Meril portfolio covers Chromic and Plain Catgut (MERISOFT) and in natural non-absorbable we have silk (FILASILK).

For placement of sutures, surgical needles are used, which are made of stainless steel. Different types and sizes of needles are used depending on the area of application. We are dedicated to assist surgeons in tissue repair by giving them a broad gamut of products with our unmatched quality and service.

Meril Endo-Surgery Needles

In pursuit of offering best quality products, Meril sutures are paired with the superior stainless steel needles for an unparalleled surgical experience.

Meril sutures come with sharper and stronger needles (300 series Stainless Steel) specifically designed to meet the ever growing needs in all the surgical disciplines.

With every needle swaged using Multi Stroke Technology (MST) and tested for a needle pull check, Meril needles are distinguished with a high penetration coating and a square body design for a firm grip.

Needle Profiles	Point type	Symbol

Needle Specifications

Type	Taper	Reverse cutting	Diamond	Cutting	Premium cutting	Spatula	Blunt	Taper cut
Design								
Point								
Shape	Typical Applications							
Straight	Skin/subcutaneous layer closure; Purse string							
1/4 Circle	Ophthalmic/Microsurgical procedures							
3/8 Circle	Skin/subcutaneous layer/abdominal wall closure; Ophthalmic/Vascular/Plastic procedures							
1/2 Circle	Peritoneum closure; Gastrointestinal/Respiratory/Urological procedures							
5/8 Circle	Pelvic & Oral cavity; Urological procedures							
J-Shape	Laparotomy closure							
Ski	Laparoscopic procedures							

Understanding the Suture Codes

Meril code logic represents the necessary information needed to identify the required suture-needle combination. The suture codes are alphanumeric in nature to indicate the suture material, the suture size, and the reference code. The alphabetical suffixes are a key to understand the additional features about the suture and/or the needle.

Material Prefixes

ABBREVIATION	MEANING
PGN	Polyglactin 910
PGP	Polyglactin 910 (with Chlorhexidine)
PGF	Polyglactin 910 Fast
MS	Polyglycolic Acid
MSP	Polyglycolic Acid (with Chlorhexidine)
MST	Polyglycolic Acid (with Triclosan)
PCL	Poliglecaprone 25
PDX	Polydioxanone
CGL	Chromic Catgut Loop
SLK	Silk
SLS	Silk Non Needled
NYL	Polyamide
NYS	Polyamide Non Needled
PPL	Polypropylene
PPG	Polypropylene with Pledgets
STC	Steel Wire

*In case of

- Polyester (Mericon XL), codes start with ME6XX, ME6XXX, ME4XXX, MEXXXX; and polyester with pledgets (Mericon XL P), codes start with PMEXXX or MMEXXXX
- Chromic Catgut (Merisoft Chromic), codes start with ME40XX, ME42XX, ME50XX
- Chromic Catgut non needled (Merisoft Chromic), codes start with SS22XX
- Plain Catgut (Merisoft Plain), codes start with ME50XX
- Plain Catgut non needled (Merisoft Plain), codes start with SS20XX

Suture Sizes

- For sutures having a single-digit size, the size is written as: zero followed by the size digit.
E.g.: Size 01 (read as size 1 according to USP), Size 03 (read as size 3 according to USP).
- For finer sutures, the size is written as: the size digit followed by a zero.
E.g.: Size 60 (read as size 6-0 according to USP), Size 70 (read as size 7-0 according to USP), Size 100 (read as size 10-0 according to USP)

Suffixes

ABBREVIATION	MEANING
B/BL	Black Needle
BX	Black Needle; Extra Length Suture
DN	Double Needle
DNL	Double Needle; Long Length Suture
DS	Doctor Special Code
G	Green Suture
ML	Multi Strands
SL	Short Length Suture
U	Undyed Suture
V	Violet Suture
W	White Suture
X	Extra Pair of Suture
XF	Extra Fine Needle
XL	Extra Length Suture

Abbreviation for Specification

ABBREVIATION	MEANING
HC	1/2 CIRCLE
QC	1/4 CIRCLE
CU	3/8 CIRCLE
FE	5/8 CIRCLE
RC	REVERSE CUTTING
CT	CUTTING
RB	ROUND BODIED
TC	TAPER CUT
ST	STRAIGHT
SM	SPATULA
TRO	TROCAR
BP	BLUNT POINT
TP	PLEDGET
VIO	VIOLET
UND	UNDYED

Decoding the Codes

Needle Point Symbol

MITSUTM
Polyglactin 910 Suture

Properties

- 75% of the original is retained until initial 14 Days
- 50% of the original is retained until initial 21 Days
- There is a subsequent loss between four to five weeks post implantation
- Complete absorption usually takes place between 56 to 70 Days

Indications

- Gastrointestinal procedures
- Gynaecology/Obstetric procedures
- Ophthalmic procedures
- Orthopedic procedures
- Urology procedures
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- Smooth knot run-down/Knot slide
- Gentle knot repositioning
- Excellent knot security
- Minimal inflammatory reaction

Product Overview

Structure	: Multifilament, Braided
Colour	: Dyed, Undyed
	
Chemical composition	: Poly (glycolide-co-l-lactide 90/10)
Coating	: Poly(glycolide-co-l-lactide 30/70) + Calcium Stearate
Sizes	: Dyed - USP 8/0 (metric 0.4) - USP 2 (metric 5) : Undyed - USP 6/0 (metric 0.7) - USP 2 (metric 5)
Type of absorption	: Hydrolysis
Sterilization	: Ethylene oxide

MITSU C+TM

Polyglactin 910 Suture with Chlorhexidine

Properties

- Retention of 75% knot tensile strength after 14 days
- Retention of 50% knot tensile strength after 21 days
- Complete mass absorption within 56 to 70 days

Indications

- Gastrointestinal procedures
- Gynaecology/Obstetric procedures
- Orthopedic procedures
- Urology procedures
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- Smooth knot run-down/Knot slide
- Gentle knot repositioning
- Excellent knot security
- Minimal inflammatory reaction

MITSU FST™

Polyglactin 910 Fast Suture

Properties

- 50% of the original is retained until initial 5 Days
- approximately 10-14 Days post implantation, the original tensile strength is completely lost
- Complete absorption usually takes place by 42 Days

Indications

- Gynaecology/Obstetric procedures (e.g.: episiotomy repair)
- Urology procedures
- Ophthalmic procedures (e.g.: conjunctiva suturing)
- Odontology procedures (e.g.: oral mucosa)
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- High initial tensile strength
- Predictable and constant degradation rate
- Excellent knot security
- Excellent handling properties
- Quick mass absorption

MEGASORB™

Polyglycolic Acid Suture

Properties

- 70%-80% of the original is retained until initial 14 Days
- 50% of the original is retained until initial 21 Days
- There is a subsequent loss between four to five weeks post implantation
- Complete absorption usually takes place between 60 and 90 Days

Indications

- Gastrointestinal procedures
- Gynaecology/Obstetric procedures
- Ophthalmic procedures
- Orthopedic procedures
- Urology procedures
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- High tensile strength
- Excellent knotting ability
- Smooth passage through tissue
- Easy handling

Product Overview

Structure	: Multifilament, Braided
Colour	: Dyed, Undyed
	
Chemical composition	: Polyglycolic acid
Coating	: Polycaprolactone and Calcium Stearate
Sizes	: Violet - USP 8/0 (metric 0.4) - USP 2 (metric 5)
	: Undyed - USP 6/0 (metric 0.7) - USP 2 (metric 5)
Type of absorption	: Hydrolysis
Sterilisation	: Ethylene oxide

MEGASORB PLUS™

Polyglycolic Acid Suture with Chlorhexidine

Properties

- Retention of 70% knot tensile strength after 14 days
- Complete mass absorption within 60 to 90 days

Indications

- Gastrointestinal procedures
- Gynaecology/Obstetric procedures
- Orthopedic procedures
- Urology procedures
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- Smooth knot run-down
- Gentle knot repositioning
- High knot holding capacity
- Minimized inflammatory reaction

Also available **MEGASORB T+** Polyglycolic Acid with Triclosan

Product Overview

Structure	: Multifilament, Braided
Colour	: Dyed, Undyed
	
Chemical composition	: Polyglycolic acid
Coating	: Polycaprolactone + calcium stearate + Antibacterial agent Chlorhexidine
Sizes	: USP 8/0 (metric 0.4) - USP 2 (metric 5)
Type of absorption	: Hydrolysis
Sterilization	: Ethylene oxide

MEGASORB RAPID™

Polyglycolic Acid Fast Suture

Properties

- 50% of the original is retained until initial 6 to 8 Days
- There is a subsequent loss by 17 days post implantation
- Complete absorption usually takes place by 42 Days

Indications

- Gynaecology/Obstetric procedures (e.g.: episiotomy repair)
- Urology procedures
- Ophthalmic procedures (e.g.: conjunctiva suturing)
- Odontology procedures (e.g.: oral mucosa)
- Paediatric procedures
- Skin closure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- High initial tensile strength
- Predictable and constant degradation rate
- Good knot security
- Excellent handling properties
- Quick mass absorption

Product Overview

Structure	: Multifilament, Braided
Colour	: Undyed
	
Chemical composition	: Polyglycolic acid
Sizes	: USP 6/0 (metric 0.7) - USP 2 (metric 5)
Type of absorption	: Hydrolysis
Sterilization	: Gamma radiation

FILAPRON™

Poliglecaprone 25 Suture

Properties

- 80%-60% of the original is retained until initial 7 Days (DYED)
- 60%-50% of the original is retained until initial 7 Days (UNDYED)
- 40%-30% of the original is retained until initial 14 Days (DYED)
- 30%-20% of the original is retained until initial 7 Days (UNDYED)
- There is a subsequent loss 28 days post implantation
- Complete absorption usually takes place between 90 to 120 Days

Indications

When short wound support is desirable

- Skinclosure (intracutaneous, subcutaneous)
- Ligatures

Advantages

- Short-term absorption profile
- High knot pull tensile strength
- Superior handling features

Product Overview

Structure	: Monofilament
Colour	: Dyed, Undyed
Chemical composition	: Poly(glycolide-co-caprolactone)PGCL
Sizes	: USP 6/0 (metric 0.7) - USP 1 (metric 4)
Type of absorption	: Hydrolysis
Sterilization	: Ethylene oxide

FILAXYN™

Polydioxanone Suture

Properties

- 70% of the original is retained until initial 14 Days
- 50%-60% of the original is retained until initial 28 Days
- There is a subsequent minimal absorption until about 90 th post implantation day
- Complete absorption usually takes place between 180 - 210 days

Indications

- When prolonged wound support is desirable
- Abdominal wall closure
- Orthopedic procedures
- Pediatric sternum closure
- Oncocological procedures

Advantages

- High initial tensile strength
- Predictable absorption
- Prolonged wound support
- Smooth passage through tissues
- Minimal tissue reaction
- Good handling characteristics
- Standard monofilament knot for security

Product Overview

Structure	: Monofilament
Colour	: Violet
Chemical Composition	: Poly (p-dioxanone)
Sizes	: USP 6/0 (metric 1.5) - USP 2 (metric 5)
Type of absorption	: Hydrolysis
Sterilization	: Ethylene oxide

MERISOFT PLAINTM

Plain Catgut Suture

Properties

The tensile strength is maintained for not more than 7 to 10 days post implantation, and its absorption is complete within 60 to 90 days.

Indications

MERISOFT PLAINTM suture is indicated for use in general soft tissue approximation and/or ligation.

Advantages

- Highest level of collagen guarantees predictable absorption
- Accurate polishing ensures smooth tissue passage
- Packed in liquid to reduce memory & increase pliability
- Rigidly controlled spinning & drying to ensure higher tensile strength

Product Overview

Primary packaging	: Packed in an aluminum foil pouch
Secondary packaging	: Primary pack is loaded in a secondary pouch made of medical grade paper & laminated polyethylene film
Sizes	: USP 6/0 (metric 1) - USP 2 (metric 6)
Colour	: Yellow-tan
Sterilization	: Gamma radiation

Meril Endo-Surgery Product Catalogue | **Wound Closure** 91

MERISOFT CHROMIC™

Chromic Catgut Suture

Properties

MERISOFT CHROMIC™ gut suture is treated with a chromium salt solution to resist the enzymatic action, prolonging the absorption time to 90 to 120 days.

Indications

MERISOFT CHROMIC™ suture is indicated for use in general soft tissue approximation and/or ligation.

Advantages

- Highest level of collagen guarantees predictable absorption
- Accurate polishing ensures smooth tissue passage
- Packed in liquid to reduce memory & increase pliability

Product Overview

Primary packaging	: Packed in an aluminum foil pouch
Secondary packaging	: Primary pack is loaded in a secondary pouch made of medical grade paper & laminated polyethylene film
Sizes	: USP 6/0 (metric 1) - USP 2 (metric 6)
Colour	: Brown dyed
Sterilization	: Gamma radiation

FILASILK™

Silk Suture

Indications

- General surgery procedures
- Skin closure
- Oral surgery procedures
- Ophthalmic procedures
- Ligatures

Advantages

- Excellent handling properties
- Good knot security

Product Overview

Structure	: Braided
Colour	: Black
Origin	: Silkworm larval cocoons (Bombyx mori)
Composition	: Natural silk filaments
Sizes	: USP 8/0 (metric 0.4) - USP 2 (metric 5)
Sterilization	: Gamma radiation

MERISTEELTM

Steel Suture

Indications

- Orthopedic procedures
- Sternum closure

Advantages

- Exceptional tensile strength
- Excellent tissue compatibility

Product Overview

Structure	: Monofilament
Colour	: Silver/Steel
Chemical composition	: Stainless steel
Sizes	: USP 5 (metric 1) - USP 6 (metric 8)
Sterilization	: Gamma radiation

FILAMIDE™

Polyamide Suture

Indications

- Skin closure (intracutaneous, subcutaneous)
- Plastic and reconstructive procedures
- Microsurgery procedures
- Ophthalmic procedures

Advantages

- Flexible, easy to handle and tie
- Smooth passage through tissue
- Excellent histocompatibility

Product Overview

Structure	: Monofilament
Colour	: Black
Chemical composition	: Polyamide 6 - 6.6
Sizes	: USP 10/0 (metric 0.2) - USP 2 (metric 5)
Sterilization	: Gamma radiation

FILAPROP™

Polypropylene Suture

Indications

- Skin closure (intracutaneous, subcutaneous)
- Cardiovascular procedures
- Neurological procedures
- Ophthalmic procedures

Advantages

- Smooth passage through tissue
- Minimal acute inflammatory reaction in tissues
- Unsurpassed strength
- Optimal elasticity and elongation properties
- Available in Less Memory Tray (LMT)

Product Overview

Structure	: Monofilament
Colour	: Blue
Chemical composition	: Polypropylene
Sizes	: USP 10/0 (metric 0.2) - USP 2 (metric 5)
Sterilization	: Ethylene oxide

MERICRON XLTM

Polyester Suture

Indications

- Cardiovascular procedures
- Ophthalmic procedures
- Neurological procedures

Advantages

- Smoother suture surface
- Less resistance to knot sliding
- Better strength
- Pliable structure

Product Overview

Structure	: Braided
Colour	: Green, White
Chemical composition	: Polyethylene terephthalate
Coating	: Polybutilate
Sizes	: USP 6/0 (metric 0.7) - USP 5 (metric 7)
Sterilization	: Gamma Radiation
