

GlobalFiler IQC PCR Amplification Kit

Cat. No. A43565

We have performed developmental validation experiments in accordance with the DNA Advisory Board (DAB) Quality Assurance Standards (September 1, 2011) and guidelines from the Scientific Working Group on DNA Analysis Methods (SWGDM) (December 2016) to evaluate the performance of the Applied Biosystems™ GlobalFiler™ IQC PCR Amplification Kit. We have validated the GlobalFiler IQC kit for use in human identification testing.

Each laboratory using the GlobalFiler IQC PCR Amplification Kit should perform its own appropriate internal validation studies to establish interpretation criteria and demonstrate that the GlobalFiler IQC kit is appropriate and fit for its own human identification uses.
