

Oper film®

Transparent protection

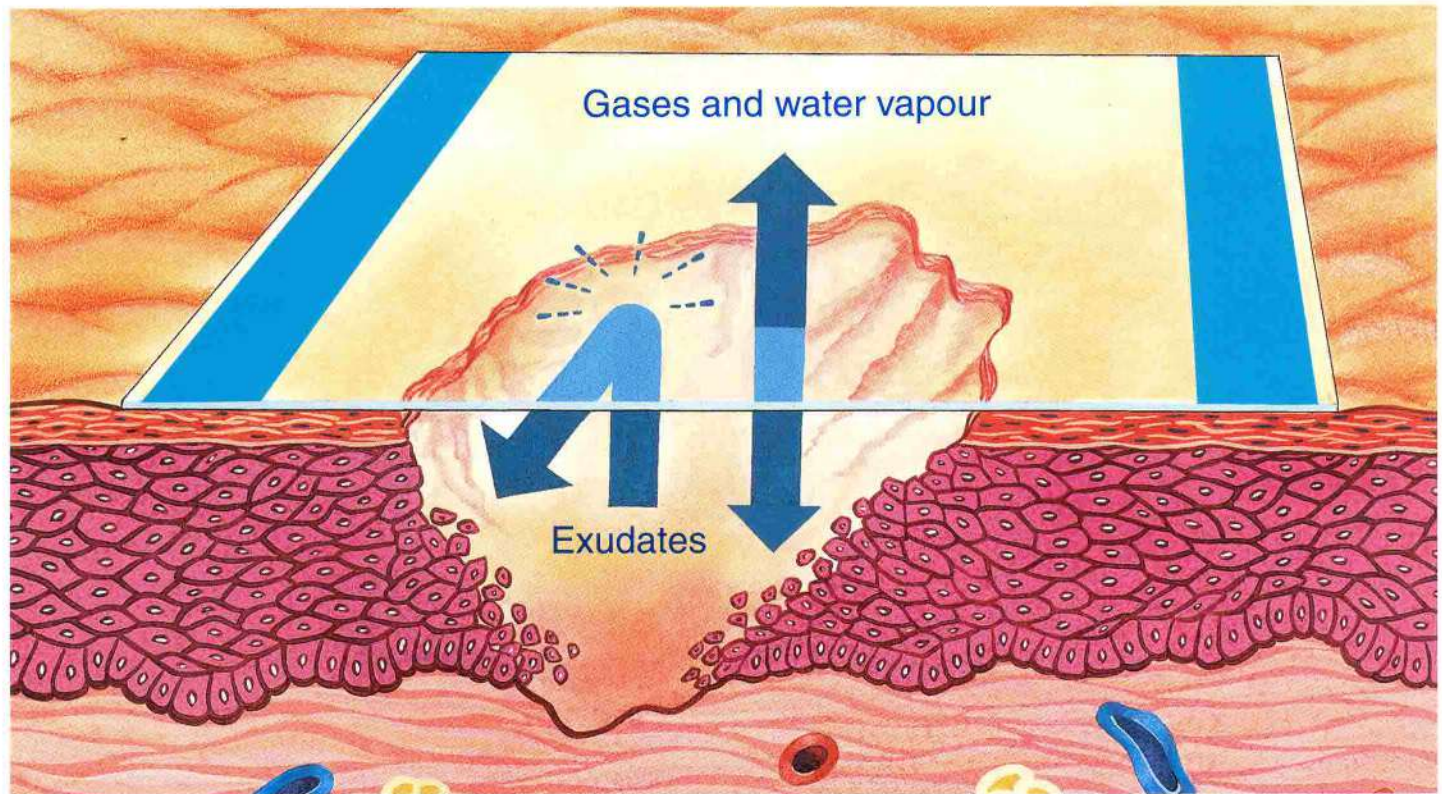

- ***Catheter fixation***
- ***Incision field***
- ***Dressing for burns, ulcers, skin grafts***

IBERHOSPITEX S.A.

Oper film[®] offers numerous advantages

OPER FILM is a transparent polyurethane membrane which is elastic and adhesive. Due to its intrinsic characteristics, it has various medical and therapeutic applications.

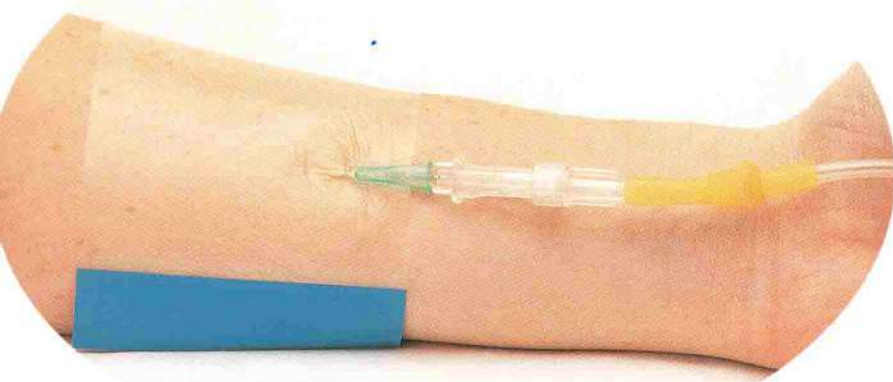

OPER FILM'S ADVANTAGES

- | | |
|---|---|
| ● Effective protection | ➡ Less risk of infections |
| ● Impermeable to liquids | ➡ Retains wound exudations |
| ● Permeable to gases and water vapour | ➡ Permits oxygen at both wound and skin |
| ● Adheres well on dry skin without damaging the wound | ➡ Optimal and lasting fixation |
| ● Transparent | ➡ Constant visual control of wound |
| ● Elasticity without deformation | ➡ Perfect adaptation to all body parts |
| ● Sterile and hypoallergenic | ➡ Maximum safety during use |

Advantages in a diversity of applications

OPER FILM AS A PROTECTIVE DRESSING

Accelerates the curing process of lesions and creates a better environment for the healing of wounds such as ulcers, first and second degree burns, skin grafts.

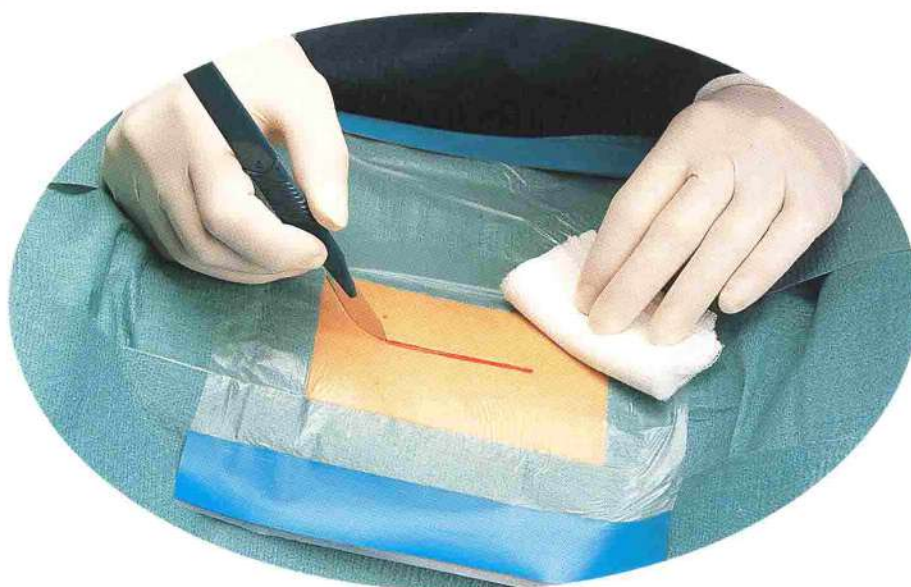

OPER FILM FOR THE FIXATION OF CATHETERS

Simultaneously provides excellent fixation and an effective protection against infections, thus making it easier to control visually the area surrounding the puncture.

OPER FILM DURING SURGERY

Deters the migration of bacteria from the skin to the surgical wound, and remains in optimal conditions even during prolonged interventions.

■ Precautions

Oper strip is a sterile product; do not use if the packet is open or damaged. Single-use product. Do not re-sterilize.

■ Contraindications

Oper strip should not be used in the following cases:

- When the wound is infected.
- If there is excessive tension on the skin.
- On secondary healing wounds.
- If proper adhesion cannot be achieved (excess exudate, presence of fat or hair, etc).
- On deep wounds, unless to keep the skin edges together while transferring the patient to a medical centre.

Oper strip

Adhesive skin sutures

Fast and easy to apply skin sutures

Aids wound healing, keeping scarring to a minimum

Fast and easy to apply skin suture strips
with hypoallergenic adhesive

Oper strip

Adhesive skin sutures

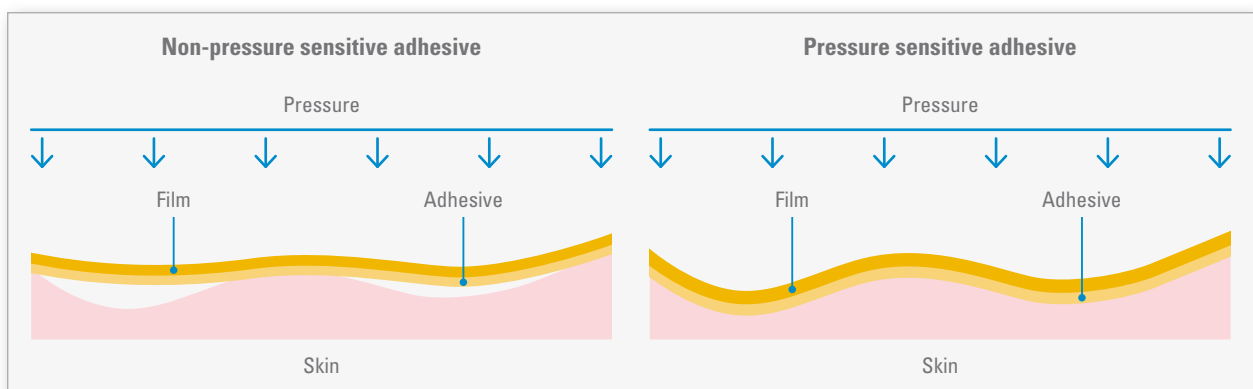

Oper strip provides support that gives stability to the wound, aiding healing and keeping scarring to a minimum for:

- Superficial or moderately-deep skin cuts.
- Lacerations and surgical incisions.
- Traditional sutures.
- Substitute after removal of sutures.

■ Provides support, aiding healing

Oper strip is an adhesive skin suture strip, made of breathable, non-woven polyamide/polyester fabric and coated with latex-free hypoallergenic acrylic adhesive.

It provides excellent adherence, secure approximation of the wound edges and high resistance to traction. It does not peel off in contact with water or with movement. Removal is easy and painless with no residue. Oper strip can remain in place for up to 7 days.

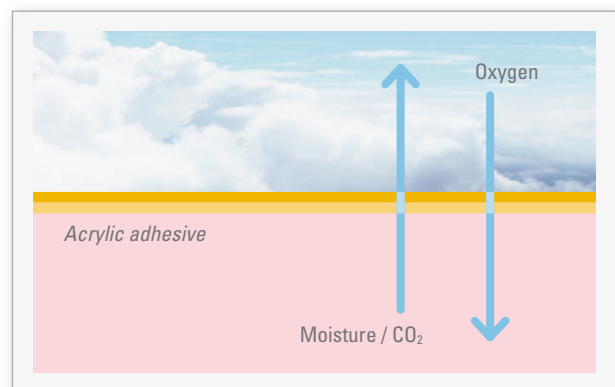

■ Acrylic adhesive

- Pressure-sensitive.
- Temperature resistant (0-55 °C).
- Waterproof.
- Permeable to moisture.
- Smooth and stable adherence to the skin.
- Easy to remove.

■ Highly breathable

Advanced production process.

The adhesive on our suture strips is applied onto non-woven polyamide/polyester fabric, providing excellent permeability to O₂ and moisture.

■ Excellent adherence on areas subject to movement

The non-woven polyamide/polyester fabric provides high resistance to traction on parts of the body subject to movement: joints, highly contoured areas and places where oedema is expected.

■ Flesh colour

Better results aesthetically.

■ Latex-free

Oper strip is latex-free. Latex is a component used in many adhesives which can cause allergic reactions in predisposed patients (ranging from skin rash to anaphylactic shock).

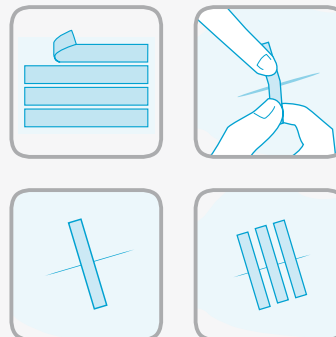

■ Hypoallergenic

Allergic reactions occur due to sensitivity to an adhesive in particular or to the adhesive backing; the greater the exposure to the component, the more severe the reaction. Oper strip contains no known allergens or irritant substances. Standardised protocol tested.

Instructions for use

1. Thoroughly clean and disinfect the wound and surrounding area.
2. Dry the wound and surrounding area.
3. Ensure that there are no foreign bodies remaining in the wound.
4. Remove the protective packaging and take out a suture strip, handling it with clean hands.
5. When using the suture strip alone, approximate and accurately align the wound edges and place a strip perpendicular to the cut.
6. The first strip should be placed at the centre of the wound.
7. To place the strip, stick one end at one side of the wound, without stretching it. Next, approximate the wound edges and stick the other end of the strip down at the other side.
8. The remaining strips required should be placed parallel to the first until the entire length of the wound is covered.
9. Leave a space of 2 to 5 mm, depending on the length and depth of the wound, between each strip. The most usual space to leave is 2 or 3 mm.
10. To reduce the tension on the wound, a strip can be placed on each side perpendicular to the wound over the ends of the adhesive strips covering the wound.
11. No specific follow-up is necessary after removal of the strips once the wound has healed, although visual inspection of the healing process is recommended.

Oper tape

Surgical tape

Hospital Care

A safe and comfortable barrier

Optimal fixation. High perspiration. Elasticity and comfort. Hypoallergenic adhesive.

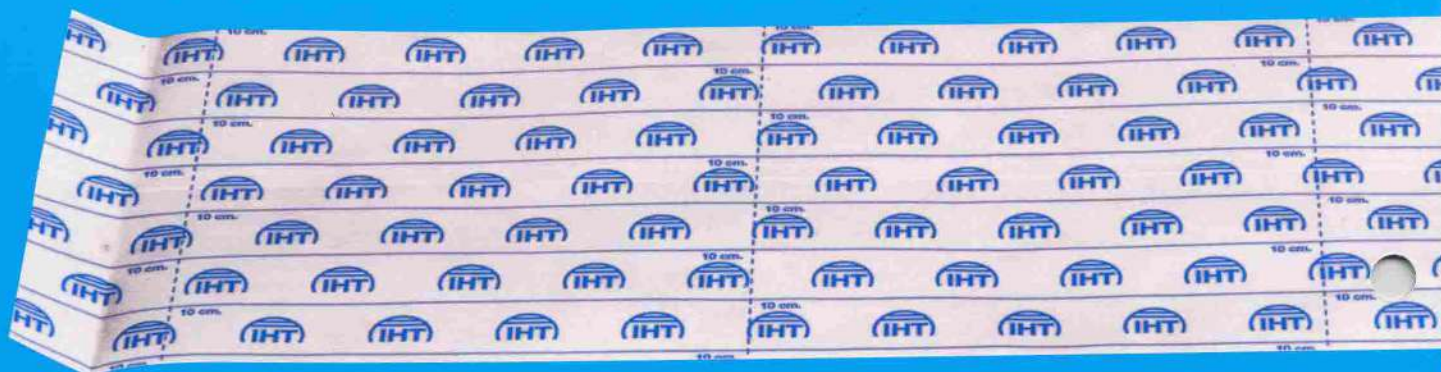

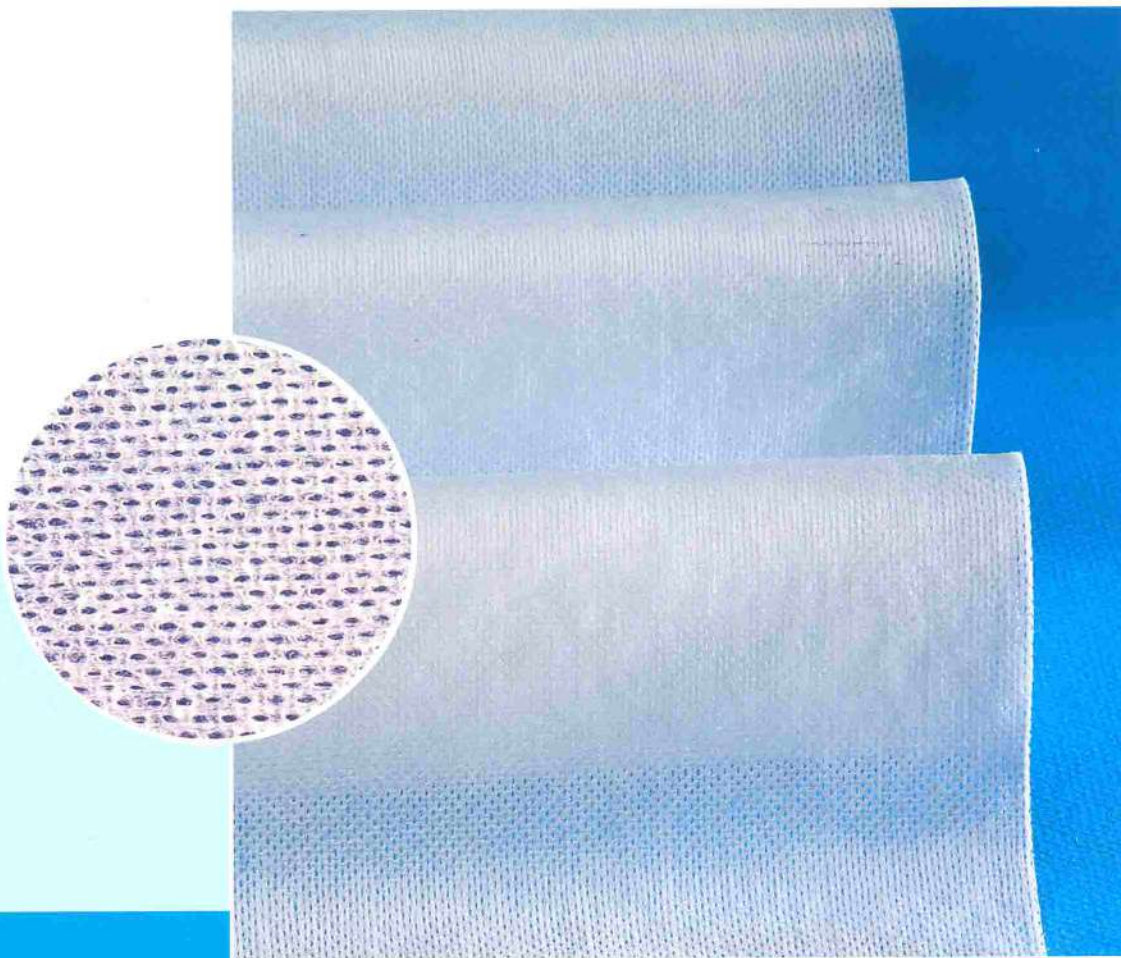

Oper tape

Surgical tape

Extensible and really perspirant

Oper tape system for fixing compresses is an adaptable, extensible, highly porous, non woven material covered by a hypoallergenic adhesive. The adhesive area is protected by precut silicon paper which allows quick and easy application.

Transversal extensibility of the non woven material

Being a transversally extensible strip **Oper tape** can be used on articulations without risk of loosening.

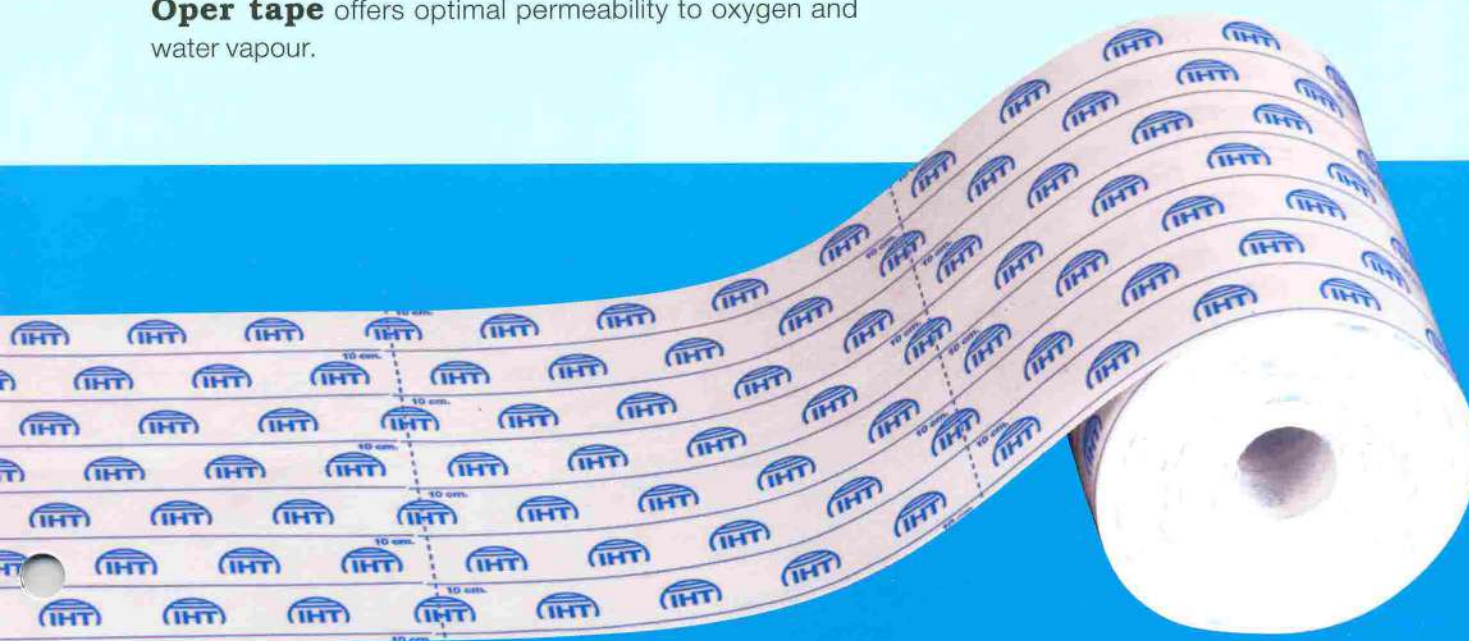

Different size presentations

The extensive range of sizes of **Oper tape** allows for the covering of any size of pad in one application, thus facilitating the work of hospital staff.

Permeable to oxygen and water vapour

Thanks to the high porosity of the non woven material together with the ultimate production process of adhesive fixing, **Oper tape** offers optimal permeability to oxygen and water vapour.

Oper tape

Surgical tape

Maximum adaptability and comfort

Autoadhesive material (Non woven 100% polyester, acrylic copolymer adhesive, silicon paper)

Oper tape paper

Surgical tape for sensitive skin

Surgical tape for sensitive skin

Surgical tape made of non-woven cellulose fabric

Highly-porous white adhesive tape with hypoallergenic acrylic adhesive, indicated for:

- Securing dressings and first aid material.
- Securing cannulas, probes and catheters.
- Protecting ostomy devices.
- Securing facial dressings.
- For patients with sensitive skin.
- For prolonged use.

Adhesive tape for application on sensitive skin

The non-woven fabric and the hypoallergenic

adhesive used enable application on sensitive skin (neonatology, geriatrics, paediatrics, dialysis, etc.) or repeat applications to the skin.

A highly-porous non-woven fabric

Its high porosity helps to maintain the integrity of the skin.

Thanks to an advanced production process, Oper tape paper adhesive is applied to non-woven cellulose fabric, providing high permeability to oxygen and steam.

Oper tape paper is resistant to extreme temperatures and moisture.

Easy to use

For the patient

The hypoallergenic acrylic adhesive can be removed easily without trauma and without leaving residue. It does not contain latex.

For healthcare personnel

The acrylic adhesive is sensitive to pressure and can be gently adhered; adhesiveness increases over time.

Oper tape paper's wide range of sizes enables any compress size to be covered in a single application, thereby facilitating hospital personnel's work.

- **0038127:** Oper tape silk 5 cm x 5 m

THERAPEUTIC PURPOSE

Oper tape silk is a white artificial silk tape with hypoallergenic acrylic adhesive, especially designed for sensitive skins and indicated for:

- Securing all kinds of dressings, bandages and pads.
- Securing catheters, probes and cannulas.
- Securing feeding tubes, drainage tubes and measuring devices.

DESCRIPTION

Oper tape silk is a white artificial silk tape with hypoallergenic acrylic adhesive. Very well tolerated by the skin. Its artificial silk fabric support enables correct transpiration and protects against water and dirt.

Oper tape silk is easy-to-tear, waterproof tape.

Oper tape silk is suitable for applying to sensitive skins without causing irritation. It fits perfectly, even on the most contoured parts of the body.

It has good shear strength and presents zigzag edges to prevent it from unweaving and facilitate tearing.

MATERIALS

Support:

White artificial silk fabric.

Adhesive:

Hypoallergenic acrylic adhesive.

“Latex-free product”

PROPERTIES

Tape for application to sensitive skins

The artificial silk fabric support of **Oper tape silk** is the part that is secured to healthy skin. It is laminated with a hypoallergenic adhesive mass. **Oper tape silk** enables the skin to breathe, thus preventing it from macerating.

Waterproof

The artificial silk fabric and acrylic adhesive are waterproof, so the patient can wash without risk of the tape becoming loose.

High-adherence power with no chemical solvents

The high adhesive power of **Oper tape silk** enables perfect fixation, even on the most contoured parts of the body, and it leaves no trace when removed.

Tape easily torn in both directions

The artificial silk fabric is easily torn in both directions, so it can be easily and securely applied and its surface can be written on.

Available in several sizes

The range of **Oper tape silk** sizes enables any pad size to be covered in a single application, thus making the jobs of healthcare personnel easier.

APPLICATION

- Use suitable tape for the indicated application.
- Always apply the tape to clean and dry skin.
- Choose adhesive strength according to clinical requirements and skin condition.
- Increase the tape's adherence by slightly pressing with the yolks of the fingers.
- Do not apply the tape with tension, unless clinically required.

The product is presented in 9.1 and 5 m rolls packed in cartons adapted to its shape and grouping.

The cartons are grouped together in IBERHOSPITEX, S.A. cardboard boxes for transport, with a label indicating:

- Company name
- Product code and description
- EC marking without ON
- Lot
- Units
- Production date
- Expiry date
- EAN 128 bar code
- Harmonised symbols

STORAGE

Store the product in regular medical material storage conditions: in a cold and dry place, protected from light.

COMMENTS AND PRECAUTIONS

The product can be used by both specialised medical personnel, in a surgical or ambulatory setting or at home.

- Do not apply to open or infected wounds.
- Do not apply under tension or to wet skin.
- Do not apply to burns.
