

Playground MINI – with towers and slides Components: Tower with roof – 1 unit

Made of galvanized metal posts (pipe with a diameter of 11.4 cm, wall thickness 2.5 mm). The upper parts of the posts will be equipped with plastic caps, fixed with two aluminum rivets. The metal elements will be processed by sandblasting and painted with electrostatic coating. The floor of the towers will be made of a 2 mm thick metal strip, processed by sandblasting and provided with holes. The metal strip surface will have a plastisol coating. The roof will be made of LLDPE using the rotomolding technology and fixed directly to the metal posts with special attachment systems.

Scale – 1 unit

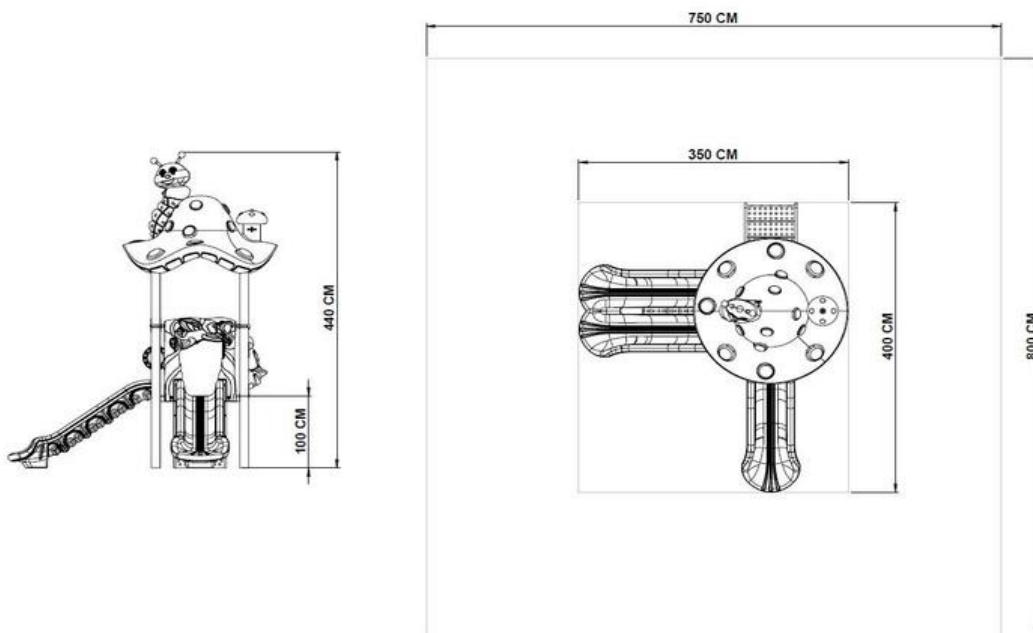

Consisting of railings (one part length will be 90 cm) made of galvanized metal pipes, processed by sandblasting and painted with electrostatic coating (the top part with dimensions 32x2.5 mm, the vertical pipes with dimensions 27x2.5 mm). The steps will be made of a 2 mm thick metal strip, processed by sandblasting and provided with 25 mm diameter holes. The metal strip surface will have a plastisol coating.

Straight slide – 1 unit

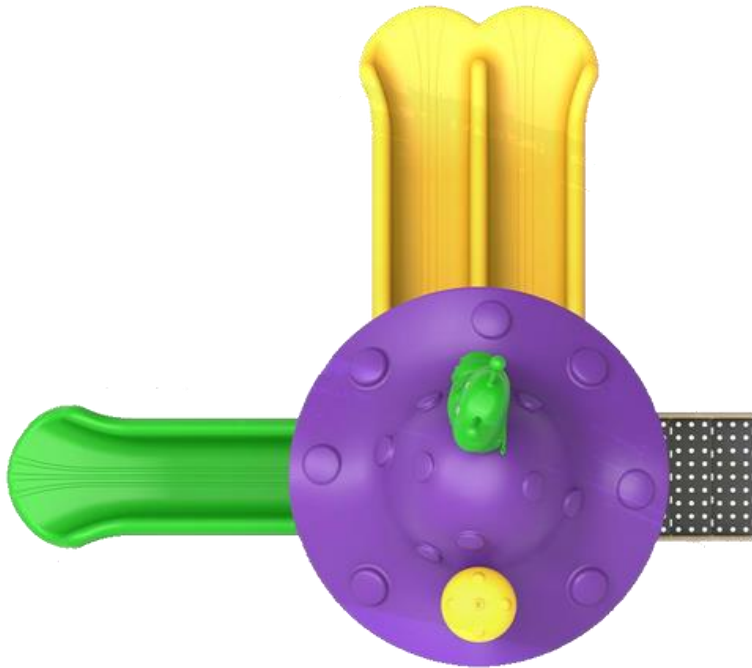

Made of LLDPE (recycled plastic granules) using rotomolding technology and will be attached to the tower. At the lower part, it will be anchored in concrete.

Double straight slide – 1 unit

Made of LLDPE (recycled plastic granules) using rotomolding technology, it will be installed on a platform with a height of 1000 mm and fixed to the tower.
