Endobronchial Blocker Tube**

Endobronchial blocker tube is a device which can be inserted down a tracheal tube after tracheal intubation so as to block off the right or left main bronchus of the lungs in order to be able to achieve a controlled one sided ventilation of the lungs in thoracic surgery. The lung tissue distal to the obstruction will collapse, thus allowing the surgeon's view and access to relevant structures within the thoracic cavity.
Our blocker tubes are making attempts to achieve the one-sided lung ventilation as an alternative to Double lumen tubes (DLT) and serve as a choice for pediatric patients as well.
Size: Standard PU Cuff Type Size (mm) : 5FR, 7FR, 9FR
Packing: Blister Bag

**GT024-800
Double Lumen Endobronchial tube**

Endobronchial tube is used for the purpose of establishing and maintaining a patient airway and ensure the adequate exchange of oxygen and carbon dioxide.

Features

1. Made from PVC in medical grade. DEHP is available.
2. Equipped with switch connector and two low-friction suction catheters.
3. Available with two types, left-side and right-side.
4. The cuffs, two lumens and pilot balloons are imprinted with Tracheal (clear) or Bronchial (blue) for easy identification.
5. Smooth inner lumens can make the bronchoscopes easier to go through.
6. Pre-loaded stylet can help tube maintain the shape for easier intubation.
