

Rosemount™ DIN-Style Temperature Sensors and Thermowells (Metric)

- RTDs (0065) and thermocouples (0185) available to meet any process requirement
- DIN-style for easy installation and replacement
- Integrated temperature assembly with Rosemount transmitters available

Features and benefits

Optimize plant efficiency and increase measurement reliability with industry-proven design and specifications

- Available in a wide variety of sensing technologies – RTD and thermocouples.
- All sensor styles and lengths are available in 6 mm diameter.
- State of the art manufacturing procedures provide robust element packaging and increasing reliability.
- Industry-leading calibration capabilities allow for Callendar-Van Dusen values to give increased accuracy when paired with Rosemount transmitters.
- Optional Class A accuracy for critical temperature measurement points.

Streamline operations and maintenance with sensor and thermowell design

- DIN-style sensor uses connection heads that allow quick mounting and replacement while maintaining environmental integrity.
- Terminal block, flying leads, and spring loaded threaded adapter styles offer remote or integral transmitter mounting configuration.

Explore the benefits of Complete Point Solutions™ from Emerson

- An “Assemble Sensor to Specific Transmitter” option enables Emerson to provide a complete point temperature solution, delivering an installation-ready transmitter and sensor assembly.
- Emerson has a complete portfolio of single point and high density temperature measurement solutions, allowing you to effectively measure and control your processes with the reliability you trust from Rosemount products.

Experience global consistency and local support from numerous worldwide Rosemount Temperature manufacturing sites

- World-class manufacturing provides globally consistent products from every factory and the capacity to fulfill the needs of any project, large or small.
- Experienced instrumentation consultants help select the right product for any temperature application and advise on best installation practices.
- An extensive global network of Emerson service and support personnel can be on-site when and where they are needed.

Access information when you need it with asset tags

Newly shipped devices include a unique QR code asset tag that enables you to access serialized information directly from the device. With this capability, you can:

- Access device drawings, diagrams, technical documentation, and troubleshooting information in your MyEmerson account
- Improve mean time to repair and maintain efficiency
- Ensure confidence that you have located the correct device
- Eliminate the time-consuming process of locating and transcribing nameplates to view asset information

Rosemount DIN-Style Sensor and Thermowell

The Rosemount DIN-Style Sensor and Thermowell have designs that provide flexible and reliable temperature measurements in process environments.

Features include:

- Temperature range of -196 to 450 °C for RTD, -40 to 1000 °C for thermocouple
- Industry-standard sensor types, including RTD and thermocouple varieties
- DIN-style design for easy mounting and replacement
- Variety of enclosure and connection head options
- Global hazardous-location approvals available
- Calibration services available to give you insight to sensor performance
- MID calibration options for custody transfer
- Assemble to transmitter option

Online Product Configurator

Many products are configurable online using our Product Configurator. Select the **Configure** button or visit our [website](#) to start. With this tool's built-in logic and continuous validation, you can configure your products more quickly and accurately.

Model codes

Model codes contain the details related to each product. Exact model codes will vary; an example of a typical model code is shown in [Figure 1](#).

Figure 1: Model Code Example

3144P D1 A 1 NA	M5 DA1 Q4
1	2

1. Required model components (choices available on most)
2. Additional options (variety of features and functions that may be added to products)

Specifications and options

See the Specifications and options section for more details on each configuration. Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See the Material selection section for more information.

Optimizing lead time

The starred offerings (★) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

Series 65 Platinum RTD and 185 Thermocouple without thermowell

Required model components

Model

Code	Description	
0065	Pt 100 RTD (IEC 751) without thermowell	
0185	Thermocouple (IEC 584 Class 1) without thermowell	

Connection head

Code	Description	IP rating ⁽¹⁾	Conduit/cable entry	
C	Rosemount aluminum	66/68	M20 x 1.5	★
D	Rosemount aluminum	66/68	½-in. NPT	★
1	Rosemount aluminum with LCD display meter cover	66/68	M20 x 1.5	★
2	Rosemount aluminum with LCD display meter cover	66/68	½-in. NPT	★
N	No connection head	N/A	N/A	★
G	Rosemount stainless steel	66/68	M20 x 1.5	
H	Rosemount stainless steel	66/68	½-in. NPT	
J	GR-A/BL (BUZ) aluminum with cable gland	65	M20 x 1.5	
L	TZ-A/BL (BUZH) aluminum with cable gland	65	M20 x 1.5	
7	Aluminum dual entry head	66	2 x ¾-in. NPT	
8	Aluminum dual entry head	66	2 x M20 x 1.5	
9	Aluminum dual entry head	66	2 x ½-in. NPT	
K	Stainless steel dual entry head	66	2 x ¾-in. NPT	
R	Stainless steel dual entry head	66	2 x M20 x 1.5	
W	Stainless steel dual entry head	66	2 x ½-in. NPT	
A	TZ-A/BL (BUZH) aluminum coated	65	M20 x 1.5	
P	SD-BK	N/A	M20 x 1.5	

(1) To maintain IP rating, use a suitable cable gland on the conduit connection thread. All threads must be sealed with a suitable sealing tape.

Sensor lead wire termination

Code	Description	
0	Flying leads (no springs on DIN plate)	★
2	Terminal block (DIN 43762)	★
3	Spring loaded adapter (½-in. NPT)	★

Sensor type

Code	Sensor	Description	Temperature range	
1	65 only	RTD, single element, 4-wire	-50 to 450 °C (-58 to 842 °F)	★
2		RTD, dual element, 3-wire	-50 to 450 °C (-58 to 842 °F)	★
3		RTD, single element, 4-wire	-196 to 300 °C (-321 to 572 °F)	★
4		RTD, dual element, 3-wire	-196 to 300 °C (-321 to 572 °F)	★
03J1	185 only	Thermocouple, Type J, single element, ungrounded	-40 to 750 °C (-40 to 1382 °F)	★
03K1		Thermocouple, Type K, single element, ungrounded	-40 to 1000 °C (-40 to 1832 °F)	★
05J1		Thermocouple, Type J, dual element, isolated, ungrounded	-40 to 750 °C (-40 to 1382 °F)	★
05K1		Thermocouple, Type K, dual element, isolated, ungrounded	-40 to 1000 °C (-40 to 1832 °F)	★
7	65 only	RTD, single element, 3-wire vibration resistance	-60 to 600 °C (-76 to 1112 °F)	
9		RTD, single element, 4-wire vibration resistance	-60 to 600 °C (-76 to 1112 °F)	
0		RTD, dual element, 3-wire vibration resistance	-60 to 600 °C (-76 to 1112 °F)	
03N1	185 only	Thermocouple, Type N, single element, ungrounded	-40 to 1000 °C (-40 to 1832 °F)	
05N1		Thermocouple, Type N, dual element, isolated, ungrounded	-40 to 1000 °C (-40 to 1832 °F)	

Extension

Code	Description	Head connection	Instrument connection	Material	
D	DIN Standard 12 x 1.5	M24 x 1.5	½-in. NPT	300 series stainless steel	★
T	DIN Standard 12 x 1.5	M24 x 1.5	M18 x 1.5	300 series stainless steel	★
F	Nipple-union-nipple	½-in. NPT	½-in. NPT	300 series stainless steel	★
J	Nipple-union (M/F)	N/A	½-in. NPT	300 series stainless steel	★
N	No extension (only available with connection head code N)				★
W	No extension head connection M24 x 1.5				★
L	No extension head connection ½-in. NPT				★

Extension length (N) in millimeters

Code	Description	
0000	No extension (use with extension code N, W, or L)	★

Code	Description	
0035	35 mm	★
0080	80 mm (standard for extension type code J)	★
0110	110 mm (standard for extension type codes F and J)	★
0135	135 mm (standard for DIN extension used with Rosemount connection head material codes C, D, G, H, 1, and 2)	★
0150	150 mm (standard for DIN extension used with form B connection head material codes J and L)	★
XXXX	Non-standard extension length (available from 35 to 500 mm in 5 mm increments)	

Thermowell material

Code	Description	
N	No thermowell	★

Sensor length (L) in millimeters

Code	Description	
0145	145 mm	★
0205	205 mm	★
0275	275 mm	★
0315	315 mm	★
0375	375 mm	★
0405	405 mm	★
0435	435 mm	★
0555	555 mm	★
XXXX	Non-standard sensor length (available from 100 to 9999 mm in 5-mm increments)	

Additional options

Sensor options

Available with Series 65 Sensor only.

Code	Description	Temperature range	
A1	Single element class A sensor	-50 to 300 °C (-58 to 572 °F) (0 -350 °C for sensor types 7, 9, 0)	★
A2	Dual element class A sensor	-50 to 300 °C (-58 to 572 °F) (0-350 °C for sensor types 7, 9, 0)	★

Product certifications

Refer to [Table 3](#) for limitation on options available with approvals.

Code	Description	
I1	ATEX Intrinsic Safety Approval	★
N1	ATEX Type n Approval	★

Code	Description	
E1	ATEX Flameproof Approval	★
ND	ATEX Dust Approval	★
K1	ATEX Flameproof, Intrinsic Safety, Type n, and Dust Approval	★
E7	IECEx Flameproof Approval	★
E5	US Explosionproof Approval	★
E4	TIIS Flameproof Approval (consult factory for availability)	★
E6	Canada Explosionproof Approval	★
E2	Brazil Flameproof Approval	★
KD	US Explosionproof, Canada Explosionproof, and ATEX Flameproof Approval	★
KM	Technical Regulations Customs Union (EAC) Flameproof, Intrinsic Safety Approval	★
IM	Technical Regulations Customs Union (EAC) Intrinsic Safety Approval	★
EM	Technical Regulations Customs Union (EAC) Flameproof Approval	★

Ground screw

Code	Description	
G1	External ground screw (only available with Rosemount connection head codes C, D,G,H, 1, and 2)	★

Cable glands

Code	Description	
G2	EEx d, brass, diameter 7.5–11.9 mm	
G4	M20 x 1.5 EMV, brass nickel coated, diameter 9–13 mm	
G5	M20 x 1.5 EMV, brass nickel coated, diameter 5–13 mm	
G7	M20 x 1.5, EEx e, blue, polyamide, diameter 5–9 mm	

Cover chain option

Code	Description	
G3	Cover chain (only available with Rosemount connection head codes C, D, G, and H)	★

Extension ring

Code	Description	
G6	Aluminum extension ring for dual transmitter mounting (use with Rosemount connection head codes C and D)	★

Termination

Code	Description	
TB	Terminal block for use with sensor termination code 3	★

Assemble-to option

If ordering Assemble-to option XA with a transmitter, specify the same option on the transmitter model number.

Code	Description	
XA	Assemble sensor to specific temperature transmitter (PTFE paste)	★

Sensor calibration with works certificate

Available with Series 65 only.

Code	Description	
V10	Sensor calibration from –50 to 450 °C (–58 to 842 °F) with A, B, C, and Callendar-Van Dusen constants	★
V11	Sensor calibration from 0 to 100 °C (32 to 212 °F) with A, B, C, and Callendar-Van Dusen constants	★
X8	Sensor calibration over specified temperature range with A, B, C, and Callendar-Van Dusen constants	★

VS system calibration

Available with Series 65 Sensor only.

Code	Description	
MD1	MID custody transfer, –196 to 0 °C (–321 to 32 °F)	★
MD2	MID custody transfer, –50 to 100 °C (–58 to 212 °F)	★
MD3	MID custody transfer, 50 to 200 °C (122 to 392 °F)	★

GOST calibration certificate

Code	Description	
QG	Russian GOST Verification Certificate	★

Temperature range option

Code	Description	
LT	Special materials to meet extended temperature range of –51 °C (–60 °F)	★

Series 65 Platinum RTD and 185 Thermocouple with tubular thermowell

Required model components

Model

Code	Description	
0065	Pt 100 RTD (IEC 751) without thermowell	
0185	Thermocouple (IEC 584 Class 1) without thermowell

L14 ⁽¹⁾	Flanged, RF	2-in. 150 lb	Stepped, NAMUR	★
L20 ⁽¹⁾	Flanged, RF	1-in. 300 lb	Stepped, NAMUR	★
L26 ⁽¹⁾	Flanged, RF	1½-in. 300 lb	Stepped, NAMUR	★
L32 ⁽¹⁾	Flanged, RF	2-in. 300 lb	Stepped, NAMUR	★
H02 ⁽¹⁾	Flange, Form B1 according to EN 1092-1	DN 25 PN 16	Stepped, NAMUR	★
H08 ⁽¹⁾	Flange, Form B1 according to EN 1092-1	DN 25 PN 25/40	Stepped, NAMUR	★
H14 ⁽¹⁾	Flange, Form B1 according to EN 1092-1	DN 40 PN 16	Stepped, NAMUR	★
H20 ⁽¹⁾	Flange, Form B1 according to EN 1092-1	DN 40 PN 25/40	Stepped, NAMUR	★
H26 ⁽¹⁾	Flange, Form B1 according to EN 1092-1	DN 50 PN 40	Stepped, NAMUR	★

(1) The NAMUR stepped profile is available in both thermowell material options, however to maintain NAMUR compliance material code Y is required. 115 mm is the minimum immersion length stepped thermowells are available and is the minimum requirement to maintain NAMUR compliance however for lengths shorter than 115 mm a straight thermowell with a 8 mm OD will be provided.

(2) Not available with thermowell Material code D.

Additional options

Sensor options

Available with Series 65 Sensor only.

Code	Description	Temperature range	
A1	Single element class A sensor	-50 to 300 °C (-58 to 572 °F) (0 -350 °C for sensor types 7, 9, 0)	★
A2	Dual element class A sensor	-50 to 300 °C (-58 to 572 °F) (0-350 °C for sensor types 7, 9, 0)	★

Product certifications

Refer to [Table 3](#) for limitation on options available with approvals.

Code	Description	
I1	ATEX Intrinsic Safety Approval	★
N1	ATEX Type n Approval	★
E1	ATEX Flameproof Approval	★
ND	ATEX Dust Approval	★
K1	ATEX Flameproof, Intrinsic Safety, Type n, and Dust Approval	★

Code	Description	
E7	IECEX Flameproof Approval	★
E5	US Explosionproof Approval	★
E4	TIIS Flameproof Approval (consult factory for availability)	★
E6	Canada Explosionproof Approval	★
E2	Brazil Flameproof Approval	★
KD	US Explosionproof, Canada Explosionproof, and ATEX Flameproof Approval	★
KM	Technical Regulations Customs Union (EAC) Flameproof, Intrinsic Safety Approval	★
IM	Technical Regulations Customs Union (EAC) Intrinsic Safety Approval	★
EM	Technical Regulations Customs Union (EAC) Flameproof Approval	★

Ground screw

Code	Description	
G1	External ground screw (only available with Rosemount connection head codes C, D,G,H, 1, and 2)	★

Cable glands

Code	Description	
G2	EEx d, brass, diameter 7.5–11.9 mm	
G4	M20 x 1.5 EMV, brass nickel coated, diameter 9–13 mm	
G5	M20 x 1.5 EMV, brass nickel coated, diameter 5–13 mm	
G7	M20 x 1.5, EEx e, blue, polyamide, diameter 5–9 mm	

Cover chain option

Code	Description	
G3	Cover chain (only available with Rosemount connection head codes C, D, G, and H)	★

Extension ring

Code	Description	
G6	Aluminum extension ring for dual transmitter mounting (use with Rosemount connection head codes C and D)	★

Material certification

Code	Description	
Q8	Thermowell material certification, DIN EN 10204 3.1	★

External pressure test

Code	Description	
R01	Thermowell external pressure testing	★

Dye test

Code	Description	
R03	Thermowell dye penetration testing	★

Assemble-to option

If ordering Assemble-to option XA with a transmitter, specify the same option on the transmitter model number.

Code	Description	
XA	Assemble sensor to specific temperature transmitter (PTFE paste)	★

Sensor calibration with works certificate

Available with Series 65 only.

Code	Description	
V10	Sensor calibration from -50 to 450 °C (-58 to 842 °F) with A, B, C, and Callendar-Van Dusen constants	★
V11	Sensor calibration from 0 to 100 °C (32 to 212 °F) with A, B, C, and Callendar-Van Dusen constants	★
X8	Sensor calibration over specified temperature range with A, B, C, and Callendar-Van Dusen constants	★

Temperature range option

Code	Description	
LT	Special materials to meet extended temperature range of -51 °C (-60 °F)	★

Series 65 Platinum RTD and 185 Thermocouple with barstock thermowell

Required model components

Model

Code	Description

Cable glands

Code	Description	
G2	EEx d, brass, diameter 7.5–11.9 mm	
G4	M20 x 1.5 EMV, brass nickel coated, diameter 9–13 mm	
G5	M20 x 1.5 EMV, brass nickel coated, diameter 5–13 mm	
G7	M20 x 1.5, EEx e, blue, polyamide, diameter 5–9 mm	

Cover chain option

Code	Description	
G3	Cover chain (only available with Rosemount connection head codes C, D, G, and H)	★

Extension ring

Code	Description	
G6	Aluminum extension ring for dual transmitter mounting (use with Rosemount connection head codes C and D)	★

Termination

Code	Description	
TB	Terminal block for use with sensor termination code 3	★

Material certification

Code	Description	
Q8	Thermowell material certification, DIN EN 10204 3.1	★

External pressure test

Code	Description	
R01	Thermowell external pressure testing	★

Internal pressure test

Code	Description	
R22	Thermowell internal pressure testing	★

Dye test

Code	Description	
R03	Thermowell dye penetration testing	★

NACE approval

Only available with thermowell material codes D, J, and A.

Code	Description	
R05	Thermowell NACE approval	★

Assemble-to option

If ordering Assemble-to option XA with a transmitter, specify the same option on the transmitter model number.

Code	Description	
XA	Assemble sensor to specific temperature transmitter (PTFE paste)	★

Sensor calibration with works certificate

Available with Series 65 only.

Code	Description	
V10	Sensor calibration from -50 to 450 °C (-58 to 842 °F) with A, B, C, and Callendar-Van Dusen constants	★
V11	Sensor calibration from 0 to 100 °C (32 to 212 °F) with A, B, C, and Callendar-Van Dusen constants	★
X8	Sensor calibration over specified temperature range with A, B, C, and Callendar-Van Dusen constants	★

VS system calibration

Available with Series 65 Sensor only.

Code	Description	
MD1	MID custody transfer, -196 to 0 °C (-321 to 32 °F)	★
MD2	MID custody transfer, -50 to 100 °C (-58 to 212 °F)	★
MD3	MID custody transfer, 50 to 200 °C (122 to 392 °F)	★

Temperature range option

Code	Description	
LT	Special materials to meet extended temperature range of -51 °C (-60 °F)	★

Rosemount Series 96 Barstock Thermowell

The Rosemount Series 96 Barstock Thermowell has designs that provide flexible and reliable temperature measurements in process environments.

Features include:

- Threaded, flanged, and weld-in styles
- Wake frequency calculations conforming to ASME PTC 19.3
- NACE approval available
- Variety of testing and certification options available

Wake frequency calculation

Code	Description	
R21	Wake frequency (thermowell strength calculation)	★

Sensor reference information

Overview

Rosemount integral mount temperature sensors, accessory hardware, and assemblies constitute a complete line of industrial temperature-sensing instruments. A variety of RTD and thermocouple sensors are available alone, or as complete assemblies including connection heads, thermowells, and extension fittings. Emerson offers complete temperature measurement assemblies including Rosemount Smart and Programmable Temperature Transmitters. Ask your Emerson representative for details.

Series 65 Platinum RTD Temperature Sensors are highly linear and have a stable resistance versus temperature relationship. These sensors are used primarily in industrial environments where high accuracy, durability, and long-term stability are required. Series 65 Sensors are designed to meet the most critical parameters of international standards: IEC 751:1983, Amendment 1:1986 and 2:1995 and DIN EN 60751:1996. This standardization provides sensor interchangeability without the need for transmitter circuitry adjustment.

Enhanced performance and optimal temperature measurement accuracy is available for Series 65 Sensors coupled with a range of Rosemount Temperature Transmitters through calibration schedules and Callendar-Van Dusen constants.

Series 185 Thermocouple Temperature Sensors conform to IEC 584:1982, Amendment 1:1989 and are available in types J, K, and N. Series 185 Sensors are available single ungrounded, or dual ungrounded, isolated.

All sensors are available in a variety of lengths⁽¹⁾ and ranges with flying lead, terminal block, or ½-in. NPT spring-loaded adapter lead wire terminations.

In addition to complete assemblies, Emerson offers a selection of separate accessory hardware including connection heads and thermowells.

Selecting an extension and thermowell

Aside from ambient temperature variations, heat from the process, in a direct mounting configuration, is transferred from the thermowell to the transmitter housing. If the expected process temperature is near or beyond the transmitter specification limits, consider the use of additional thermowell extension length, an extension nipple, or a remote mounting configuration to isolate the transmitter from these excessive temperatures. Figure 3 provides an example of the relationship between transmitter housing temperature rise and extension length. Use Figure 3 and the accompanying example as a guide for determining adequate thermowell extension length.

Figure 3: Transmitter Housing Temperature Rise vs. Uninsulated Extension Length

- A. 815 °C process temperature
- B. 540 °C process temperature
- C. 250 °C process temperature

Example

The rated ambient temperature specification for the transmitter is 85 °C. If the maximum ambient temperature is 40 °C and the temperature to be measured is 540 °C, the maximum allowable housing temperature rise is the rated temperature specification limit minus the existing ambient temperature (85 – 40 °F), or 45 °C.

As shown in Figure 3, an “N” dimension of 90 mm will result in a housing temperature rise of 22 °C. An “N” dimension of 100 mm would therefore be the minimum recommended length, and would provide a safety factor of about 25 °C. A longer “N” dimension, such as 150 mm, would be desirable in order to reduce errors caused by transmitter temperature effect, although in that case the transmitter may require extra support.

Integral mount sensors and assemblies

Series 65 RTD and Series 185 Thermocouple Temperature Sensors may be ordered as complete assemblies, which provide a complete, yet simple, means of specifying the proper industrial hardware for most temperature measurements. One assembly model number, derived from one ordering table, completely defines the type of sensing element, as well as the material, length, and style of extension fittings and thermowells.

All sensor assemblies are sized and inspected by Emerson to ensure complete component compatibility and performance.

(1) Sensors over one meter long will be supplied coiled unless otherwise requested.

Mounting configurations

Series 65 Platinum RTDs and Series 185 Thermocouples

You may order the Series 65 RTDs and the Series 185 Thermocouples with flying leads, a terminal block, or a ½-in. NPT spring-loaded adapter.

Ordered with flying leads, the sensors are designed to be used with a head mount temperature transmitter attached directly to the sensor. The flying lead configuration allows the removal of the sensor and transmitter as one assembly.

The BUZH connection head allows terminal block style sensors and transmitters to be mounted together. The transmitters in these assemblies will be mounted in the cover of the BUZH connection head.

The sensors with a ½-in. NPT spring-loaded adapter are used with directly mounted Rosemount 3144P Field Mount Temperature Transmitters or through the use of Rosemount connection heads. This assembly requires a terminal block to be mounted inside the head.

Hazardous area approvals are available with all three types of sensors, but they are dependent on the configuration of the entire temperature measurement assembly (see [Product certifications](#)).

Temperature considerations

Ambient temperature limits for the connection head are -40 °C to +85 °C. The LT option may be extended down to a range of -51 °C to +85 °C.

Ambient temperature range addresses the connection head only, and requires suitable cable glands and field wiring provisions to meet the temperature requirements below -40 °C.

Figure 4: Series 65 RTD Lead Wire Configuration

Series 65 RTD flying leads and spring-loaded adapter-termination codes 0 or 3 only

Series 65 RTD terminal block termination code 2

(1) The color of the terminal posts in the terminal block may not match the color of the lead wires connected to the capsule.

Figure 5: Series 185 Lead Wire Configuration

Series 185 RTD thermocouple terminal block

Specifications

Series 65 Platinum RTD

100 Ω RTD at 0 °C, $\alpha = 0.00385 \text{ } ^\circ\text{C}^{-1}$

Temperature range

-50 to 450 °C or -196 to 300 °C depending on type

Self heating

0.15 °C/mW when measured per method defined in IEC 751:1983, Amendments 1 and 2

Thermal response time

Nine seconds maximum required to reach 50 percent sensor response when tested in flowing water according to IEC 751:1983, Amendments 1 and 2

Immersion error

60 mm minimum usable depth of immersion when tested according to IEC 751:1983, Amendments 1 and 2

Insulation resistance

1,000 M Ω minimum insulation resistance when measured at 500 Vdc and at room temperature

Sheath material

316 SST sensor tip (hot end) with 321SST mineral insulated cable construction

Lead wire

PTFE insulated, silver-coated, 0.21mm² (24 AWG) stranded copper wire. See [Figure 4](#) for wire configuration.

Identification data

The model and serial numbers are marked on each sensor.

Ingress protection (IP) ratings

The Rosemount connection head is rated to IP66/IP68 and NEMA[®] 4X. The BUZ and BUZH connection heads are rated to IP65. To maintain IP rating at installation, one of the following options must be used with the connection head:

- Extension and/or adapter and barstock thermowell
- Tubular thermowell
- Sensor and sealing screw (extension option “V”)
- General purpose adapter

Vibration limits

For sensor types option code “1”, “2”, and “5”, the vibration resistance is ± 0.02 percent ($0.05\text{ }^{\circ}\text{C}$) maximum ice-point resistance shift after 3 g vibration between 10 and 500 Hz for 150 hours according to IEC 751:1983, Amendments 1 and 2.

For sensor types option code “3”, “4”, and “6” the vibration resistance is $0.1\text{ }^{\circ}\text{C}$ maximum ice-point resistance shift after 1 g vibration between 10 and 500 Hz for 150 hours according to IEC 60751:2008, Amendments 1 and 2.

For sensor types option code “7”, “9”, and “0”, the vibration resistance is ± 0.02 percent ($0.05\text{ }^{\circ}\text{C}$) maximum ice-point resistance shift after 10 g vibration between 10 and 500 Hz for 150 hours according to IEC 751:1983, Amendments 1 and 2.

Table 1: Series 65 Interchangeability

Series 185 Thermocouple

Construction

A thermocouple consists of a junction between two dissimilar metals that produces a change in thermoelectric emf in relationship to a change in temperature. Rosemount Series 185 thermocouple sensors are manufactured from selected materials to meet IEC 584 Tolerance Class 1. The junction of these wires is welded to form a pure joint, maintaining the integrity of the circuit and ensuring the highest accuracy. Ungrounded junctions are protected from the environment by the sensor sheath. The ungrounded and isolated junctions provide electrical isolation from the sensor sheath.

Sheath material

Rosemount thermocouples are made of a mineral insulated cable design with a variety of sheath materials available to suit both the temperature and the environment. For temperatures up to $800\text{ }^{\circ}\text{C}$ in air, 1.4541 (321 SST) is standard. For temperatures from 800 to $1100\text{ }^{\circ}\text{C}$ in air, 2.4816 (Alloy 600) is standard. For temperatures above $1100\text{ }^{\circ}\text{C}$, precious metal or ceramic protective sheaths are available upon request. For strongly oxidising or reducing atmospheres, consult your local Emerson representative.

Lead wires

PTFE insulated, 0.52 mm^2 (20 AWG) stranded thermocouple wire. Color coded per IEC 584. See [Figure 5](#) for wire configuration.

Identification data

The model and serial numbers are marked on each sensor.

Insulation resistance

1,000 M Ω minimum insulation resistance when measured at 500 Vdc and at room temperature.

Ingress protection (IP) ratings

The Rosemount connection head is rated to IP66/IP68 and NEMA 4X. The BUZ and BUZH connection heads are rated to IP65. To maintain IP rating at installation, one of the following options must be used with the connection head:

- Extension and/or adapter and barstock thermowell
- Tubular thermowell
- Sensor and sealing screw (Extension option “V”)
- General purpose adapter

Table 2: Characteristics of Series 185 Thermocouples

Type	Alloys (wire color)	Sheath material	Temperature range (°C)	Limits of error (°C) (whichever is greater)	Tolerance class
J	Fe (+ black), CuNi (– white)	1.4541 (321 SST)	–40 to 750	±1.5 or ±0.4%	1
K	NiCr (+ green), NiAl (– white)	2.4816 (Alloy 600)	–40 to 1000	±1.5 or ±0.4%	1
N	NiCrSi (+ pink), NiSi (– white)	2.4816 (Alloy 600)	–40 to 1000	±1.5 or ±0.4%	1

Material selection

Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Product certifications

Rev 1.18

European Directive information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at [Emerson.com/Rosemount](https://www.emerson.com/Rosemount).

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Sensor-to-transmitter matching

Significant measurement accuracy improvements can be attained using a temperature sensor that is matched to a temperature transmitter. This process involves identifying the relationship between resistance and temperature for a specific RTD sensor. This relationship, approximated by the Callendar-Van Dusen equation, is described as:

$$R_t = R_o + R_o\alpha[t - \delta(0.01t - 1)(0.01t) - \beta(0.01t - 1)(0.01t)^3],$$

where:

R_t = Resistance (ohms) at temperature t (°C)

R_o = Sensor-specific constant (resistance at $t = 0$ °C)

α = Sensor-specific constant

δ = Sensor-specific constant

β = Sensor-specific constant (0 at $t > 0$ °C)

The exact values for the Callendar-Van Dusen constants (R_o , α , δ , β) are specific to each RTD sensor and are established by testing each individual sensor at various temperatures.

Series 65 RTD sensors can be ordered with the Calibration Option codes V10 or V11, where the values of all four sensor-specific constants are supplied with each sensor.

The transmitter uses the Callendar-Van Dusen constants to generate a sensor curve that describes the relationship between resistance and temperature for this particular sensor and transmitter assembly. By using the sensor's actual resistance vs. temperature curve, there is a 3- or 4-fold improvement in temperature measurement accuracy for the total system.

Options V10 and V11 are specific to a particular temperature range. As with calibration schedules, the accuracies associated with each option code represent worst-case conditions when the sensor is used over the entire temperature range. The accuracy of Series 65 sensors with the "V" option will vary because they have different hysteresis and repeatability characteristics. To ensure optimal performance, select a "V" option where the sensor's range of actual operation is between the minimum and maximum calibration points. For applications requiring the use of a Resistance vs. Temperature Table, order a temperature range-specific characterization schedule.

IEC 751 interpretation

The Callendar-Van Dusen equation is one method of describing the resistance versus temperature (R vs. T) relationship for platinum RTDs. International standard IEC 751 interprets the R vs. T relationship using an approach similar to the Callendar-Van Dusen methodology. The IEC 751 R vs. T relationship standard uses the following equation:

$$R_t = R_o[1 + At + Bt^2 + C(t - 100)t^3]$$

As in the Callendar-Van Dusen method, R_o , A, B, C are specific to each RTD and are established by testing each sensor at various temperatures. The actual values for A, B, and C differ in magnitude from the Callendar-Van Dusen constants (R_o , α , β , δ), while R_o is the same in both equations. Either methodology yields the same result in any sensor-to-transmitter matching scenario, since one equation is a simple mathematical interpretation of the other.

Typical sensor-to-transmitter matching accuracy improvements

Transmitter: Rosemount 3144P (has built-in sensor matching capabilities), span of 0 to 200 °C, accuracy = 0.1 °C)

Sensor: Series 65 RTD

Callendar-Van Dusen option: V10

Process temperature: 150 °C

Figure 6: System Uncertainty Comparison at 150 °C

(1) Calculated using RSS statistical method:

$$\text{System Accuracy} = \sqrt{(\text{Transmitter Accuracy})^2 + (\text{Sensor Accuracy})^2}$$

Calibration

Sensor calibration may be required for input to quality systems, or for control system enhancement. More frequently, it is used to improve the overall temperature measurement performance by matching the sensor to a temperature transmitter. Sensor matching is available for RTD sensors used with Rosemount Smart transmitters where the inherent stability and repeatability of the RTD technology is well established.

Ordering information

Use the formats presented below to order a calibrated series 65 RTD. If you fail to specify all of the necessary calibration-related information when you place your order, Emerson will contact you for the information and your order may be delayed slightly.

Measurement instrument directive parts certification

The Rosemount 3144P Temperature Transmitter and Rosemount 0065 Temperature Sensor have been certified to meet the European Union measurement instrument directive (MID) for custody transfer metering of liquids and gases.⁽²⁾ Choosing Rosemount temperature for a MID solution ensures that critical temperature measurement equipment will meet high expectations for unmatched system accuracy and reliability. For more information, contact your local Emerson Representative.

Calibration options

The X8 option calibrates the sensor to a customer-specific temperature range. The Callendar-Van Dusen, and A, B, and C-constants are supplied with a works certificate.

Option X8: sensor calibrated to a customer-specified temperature range (see [Temperature range](#))

When you order an RTD with the X8 option, the temperature range the sensor needs to be calibrated must be specified. Take note of the sensor temperature limits as shown below:

(2) Calculated using RSS statistical method:

$$\text{System Accuracy} = \sqrt{(\text{Transmitter Accuracy})^2 + (\text{Sensor Accuracy})^2}$$

Table 8: Typical Model Number

Model	Connection head	Lead wire termination	Sensor type	Extension type

					280	100	100	100	55	55

Figure 10: Barstock Thermowell Sensor Assemblies

- A. Head or field mount transmitter
- B. IP65 or IP65 connection heads
- C. Sensor with flying leads, terminal block, or spring-loaded adapter
- D. Stand-alone extensions
- E. Weld-in, threaded, or flanged barstock thermowells

★★ N dimension measures from thread engagement point.

★★★ This dimension is 80 mm for Class 1500 and Class 2500 flanges

Accessories

Table 12: Connection Head

Part number	Model/material	IP rating	Conduit connection	Process connection
00644-4410-0011	Rosemount aluminum	66/68	½-in. NPT	½-in. NPT
00644-4410-0013	Rosemount aluminum	66/68	½-in. NPT	M24 x 1.5
00644-4410-0021	Rosemount aluminum	66/68	M20 x 1.5	½-in. NPT
00644-4410-0023	Rosemount aluminum	66/68	M20 x 1.5	M24 x 1.5
00644-4410-0111	Rosemount aluminum with LCD display cover	66/68	½-in. NPT	½-in. NPT

Figure 11: Connection Head Dimensional Drawing

With LCD display cover
Option codes 1, 2

With standard cover
Option codes C, D, G, H

TZ-A/BL (BUZH)
Option code L

GR-A/BL (BUZ)
Option code J

- A. Head connection
- B. LCD display
- C. Cable entry

Dimensions are in millimeters.

Series 96 Barstock Thermowells

Figure 12: Flanged Barstock Thermowell – Tapered

- U** Immersion length
- D** Stem diameter
- T** Lagging length

Dimensions are in millimeters.

Flange size	D	d	T
1-in. 150–1500 lb, DN 25	19	12.5	60
1½ to 2-in. 150–600 lb, DN40–50	26.5	18	60
1.5 to 2-in. 900/1500	26.5	18	80

Note

Flanged thermowells generally conform to the specifications of ASME B 16.5 (ANSI) and DIN EN 1092-1.

Figure 13: Threaded Barstock Thermowell – Parallel Thread

- U** Immersion length
- D** Stem diameter

Dimensions are in millimeters.

Parallel thread size	D	D1	d
½-in. BSPF (G 1/2); M20 × 1.5	17	26	12.5
¾-in. BSPF (G 3/4)	19	32	12.5
1-in. BSPF (G1)	26.5	39	18
M24 × 1.5	19	29	12.5

Figure 14: Threaded Barstock Thermowell – Tapered Thread

- U** Immersion length
- D** Stem diameter

Dimensions are in millimeters.

Tapered thread size	D	d
½-in. NPT; M20 × 1.5	17	12.5
¾-in. NPT	19	12.5
1-in. NPT	26.5	18

Figure 15: Weld-In Barstock Thermowell (Codes W10, W12, W14, W16)

- U** Immersion length
- D** Stem diameter

Dimensions are in millimeters.

Socket size	S	D	d
¾-in.	26.7	19.0	12.5
1-in.	33.4	19.0	12.5
1¼-in.	42.2	19.0	12.5
1½-in.	48.3	19.0	12.5

Figure 16: Weld-in Barstock Thermowell (Codes E01, E02, E04, E05)

- U** Immersion length
- TL** Total length
- T** Lagging length

Dimensions are in millimeters.

Previous DIN form	D1	D2	D4	D5	d
TL	140	200	200	260	12.5
U	65	125	65	125	12.5
T	75	75	135	135	12.5

Wake frequency calculation

Pressure and flow vibration

The strength of a thermowell depends on several parameters relating thermowell construction to the installation environment. For most industrial applications, standard Rosemount thermowells provide the necessary strength if the material, style, and length are correct for the application. The proper selection of a thermowell depends on fluid type, temperature, pressure, and fluid velocity. Most thermowell failures are caused by vibration that is induced by fluid flow.

Emerson has a design system for the correct selection of thermowells. This selection service is available for a nominal charge, and to take advantage of this service, complete and return the Configuration Data Sheet to your local Emerson representative.
