BSS MEDICAL SUPPLY CO., LIMITED

Why BSS?

1. Qifeng Zhou, invented the conductive gel technology for BSS.
2. FDA, CE, ISO13485, Japanese Registration, RoHS, FSC in EU, SFDA (K.S.A), and dozens of patents.
3. The daily capacity is 1.5 million pcs by the advanced intelligent automatic production lines.
4. Partners from 101 countries, and products quality approved by thousands of international hospitals.
5. Full products combination meets variety testing purpose: monitoring, stress test, treadmill, holter, MRI, ICG, ABR.

Wet / Liquid Gel

Wet Gel electrodes could fast catch the ECG signal. They give dependable quick tracing with easy application and removal.

Recommended for: ·EMS ·Emergency

Item#	Size(mm)	Description	Package
B5W	43*46	Adult/Oval	50/pk, 1000/ cs
B7W	50*50	Adult / Round	50/pk, 1000/ cs

ABR Test / EEG

To perform an ABR test, electrodes are placed on the surface of the skin at the patient's head. Good signal quality is achieved by preparation of the skin, improving the conductivity. An electrical potential with very low amplitudes is amplified and recorded, while the ABR system delivers acoustical stimuli to the ears.

B19

Recommended for: ·ABR Test ·EEG Test ·Non-invasive EEG

Item#	Size(mm)	Description	Package
B19	32*40	ABR/ EEG	30/ pk, 1200/cs

Pre-wired Neonatal Electrode

The pre-wired neonatal electrode are consist of a conductive adhesive hydro-gel, a Ag/AgCl plated sensing element, a soft cloth or PE Foam substrate with the size of 22mm and a 60 cm flexible tinned copper or carbon lead-wire terminating in a standard DIN connector.
