

## Stool Container

### Stool Container

BOENMED manufactures 30ML STOOL CONTAINER. The Stool Container is a type of laboratory container used for collecting and storing stool samples.

Stool containers are equipped with screw caps that provide a tight seal, preventing spills and leaks during sample handling.

The specimen containers are transparent, allowing for easy visualization of the contents.

The Specimen Cup features a screw-on lid with an integrated collection spoon.

Screw cap and leakproof, resistant to fall and to breakage during centrifugation.

Volume:30ml

Material: made of PS.

Type: With a spoon.

Label available: with label or without label.
