The straws are used for the freezing of biological material and suitable for storage in liquid nitrogen at -196°C.

The production of the straws is certified according to DIN EN ISO 9001:2015.

The straws are made of a high quality PVC (Polyvinyl chloride), which is tested according to DIN and ISO standards.

The straws are made of food grade material according to the EC and FDA regulations for plastic material which can get into direct contact with food.

The material is tested for sperm friendliness.

The straws are available in a variety of colors.

Hereby we certify that the straws are suitable for the freezing of biological material, especially semen.

The straws are subject to a constant quality control and each batch is only delivered after being approved by our quality control management.

Hereby we certify that the disposable straws are not injurious to health for human and animal when used for their intended purpose. The straws meet all regulations regarding animal protection.
