Manual Resuscitator, pop-off valve

This Resuscitator supports the artificial respiration and heart-lung-reanimation. It is used to ventilate a patient with breathing arrest as well as to maintain the own respiration of the patient and/or to supply additional oxygen. There are different types for adults, children and infants. To meet requirements of different body heights, the compression frequency can be adjusted and a bag in a suitable size can be chosen.

Sterile: Yes No
