From <u>Health Canada</u>

New search

The product monograph is developed by a drug sponsor according to guidelines published by Health Canada that provide direction on the content and format. The veterinary labelling is developed by the drug sponsor according to the Food and Drug Regulations. While Health Canada reviews the product monograph or the veterinary labelling as part of the drug review process, it remains the responsibility of the drug sponsor to ensure that the product monograph or the veterinary labelling is complete and accurate.

Current status:	Marketed
Current status date:	2019-02-11
Original market date: 1	2007-08-13
Product name:	HEPAGAM B
Description:	HEPAT. B IMMUNE GLOBULIN (HUMAN). ACTIVE INGREDIENT STRENGTH > 312 IU/ML

<u>Same active ingredient group</u> <u>number</u>

Footnotes

- <u>1</u> The earliest marketed date recorded in the Drug Product Database.
- The purpose of the World Health Organization (WHO) Anatomical Therapeutic Chemical (ATC) classification system is to be used as a tool for drug utilization research in order to improve quality of drug use. Drugs are divided into different groups according to the organ or system on which they act and their chemical, pharmacological and therapeutical properties.

- 5 The AIG number is a 10 digit number that identifies products that have the same active ingredient(s) and ingredient strength(s). The AIG is comprised of three portions:
 - the first portion (2 digits) identifies the number of active ingredients,
 - the second portion (5 digits) identifies the unique groups of active ingredients(s),
 - the last portion (3 digits) identifies the active ingredient group strength. The strength group has a tolerance of -2% to +10%.
