2.8" Bubble Pad Stage I Overlay System

QDC-303 Alternating Bubble Mattress With Pump System

QDC-303 is designed for the treatment and prevention of pressure sore stage I in short-term and domiciliary therapies. The mattress in PVC is composed of 130 7cm-high bubble cells, particularly comfortable, it is fixed to the bed by extra flaps on both top and bottom side. Very easy to install, maintain and use thanks to the possibility of adjust comfort range. The pump can be hung to the end of the bed by means of two hooks.

- ✓ Without Flaps Optional
- ✓ Low Air Loss Holes Optional

The Actual Data for the Compressor Working Noise

Some Chinese factories always advertise in their catalogue that their compressor (with the first or second generation technology) can reach **18/16dB (A) even just 14dB (A)**. But this is IMPOSSIBLE! Even for the latest Third Generation Compressor, its noise just can reach **31-32dB (A)** which is tested in the authoritative noisy laboratory. If the average noise could reach 31-32dB (A), it will be the excellent low-noise level already.

18 dB(A) is a Joke!

40-50dB(A)
Real Sound Level 48dB(A)
- Test Environmental Noise 30 dB(A)
= 18 dB(A)
