EU-5300 Pro
Automated Urinalysis System

Unveiling the Unseen by
Unlocking Unparalleled Clarity

Three features integrated in a single system to manage the unique workflow needs of your lab

The integration of dry chemistry, formed element, and RBC phase analysis leads to a great improvement in time and space management efficiency. Even a single person can easily manage the TAT requirements during the peak hours of your lab.

Coming standard with RBC phase parameters to help rapidly identify the source of hematuria

The system can automatically provide parameters for various types of urinary RBCs, presenting histograms that clearly depict the size, shape, and hemoglobin content of these cells. By analyzing the results of RBC morphological variations (MorInfo-RBC: homogeneous/heterogeneous/mixed) and utilizing RBC morphological images, a thorough review and validation process can be conducted to identify the source of hematuria rapidly and precisely.

Dry chemistry analysis delivers precise results that are better aligned with the analysis of formed elements

The test strip for dry chemistry analysis are optimized to enable precise sampling, thereby ensuring accurate results, consistent performance, and greater ease of use.

Safety and ease of use, and efficient review

The system supports running urine samples with closed tubes, ensuring enhanced levels of biosafety. With the inclusion of Mindray data management software—LabXpert, the system shows dry chemistry, urine formed elements, and RBC phase results on a single screen, significantly improving the efficiency of report validation.
