<i>Position</i>	Java Developer
<i>Responsibilities</i>	<ol style="list-style-type: none">1. Process automate2. Create, maintain, support, modify databases: MySQL, Sql Express, PostgreSQL, Oracle3. Java Desktop App (Java SE)4. Java Web Start (jnlp)5. Java EE.6. Java Spring Boot 27. React JS framework8. Code tester9. Code maintainer10. Administrator

9. About me:

The world of coding had lead me to a another reality, where any purpose can be reached if you really want it and you are giving the best of you to achieve the goal. I'm always learning, reading to gain the things I have "missed", and never have enough time to test it all. Also reviewing my mistakes is one of my main priorities.

Java SE and desktop application were the things that gave me fun at work. But web applications are wider and with a lot of new opportunities, so Java EE (Jsp, servlets, Spring framework) is my new purpose.

And the team-work for me is the best way to make together beautiful and big things.
