

## Product Highlights

- MRI ready device has been tested for safe performance of an MRI scan using a 1.5 T (Tesla) field-strength MRI scanner when used in combination with MRI conditional leads<sup>1,2</sup>
- Parylene coating for improved abrasion resistance
- DynamicTx™ Over-current Detection Algorithm automatically changes shock configurations to ensure delivery of high voltage therapy when high current is detected
- Cold Can programmability provides an additional RV-SVC Shock Configuration to decouple the can from the shocking vector parameters in cases of lead problems
- ShockGuard™ technology with DecisionTx™ programming designed to reduce inappropriate therapy and minimise the need for programming adjustments at implant
  - SecureSense™ RV lead noise discrimination detects sustained and short bursts of lead noise that would otherwise go unnoticed or potentially lead to one or more inappropriate shocks
  - Far Field MD™ morphology discrimination and Chamber Onset discrimination improve SVT and VT discrimination for reduced inappropriate therapies
- Low Frequency Attenuation filter designed to enhance sensing performance and may reduce the possibility of oversensing T-waves
- SenseAbility™ sensing algorithm feature provides flexibility to fine-tune programming around T-wave oversensing without decreasing sensitivity
- DF4 connector designed to streamline defibrillation connections into a single terminal pin and reduce the number of set screws
- CorVue™ congestion monitoring feature monitors the intrathoracic impedance in multiple vectors for improved accuracy, and it provides the option for both patient and physician alerts
- Antitachycardia pacing (ATP) while charging and prior to charging in the VF zone further extends the programming options for terminating tachyarrhythmias without a high-voltage shock
- ST monitoring capability provides unprecedented, continuous insight into significant ST shift events and associated ventricular arrhythmias through enhanced monitoring of iEGM and ST-segment as a diagnostic tool to help guide appropriate clinical action
- Unique 40 J delivered energy safety shock option can provide a greater DFT safety margin
- DeFT Response™ technology offers the most noninvasive options for managing high DFTs
- QHR™† chemistry battery provides greater capacity for enhanced longevity and improved charge time performance compared to previous SVO batteries

## Ordering Information

Contents: Dual-chamber Implantable Cardioverter Defibrillator (ICD)

| Model Number | Dimensions (H x W x T, mm) | Weight (g) | Volume (cc) | Connector Defibrillation | Connector Sense/Pace |
|--------------|----------------------------|------------|-------------|--------------------------|----------------------|
| CD2359-40C   | 74 x 40 x 14               | 76         | 35          | DF1                      | IS-1                 |
| CD2359-40QC* | 71 x 40 x 14               | 75         | 35          | DF4                      | IS-1; DF4            |

\*Indicates models that are MRI Conditional<sup>1,2</sup>

**Indications:** The devices are intended to provide ventricular antitachycardia pacing and ventricular defibrillation for automated treatment of life-threatening ventricular arrhythmias.

**Contraindications:** Contraindications for use of the implantable cardioverter defibrillator (ICD) include ventricular tachyarrhythmias resulting from transient or correctable factors such as drug toxicity, electrolyte imbalance, or acute myocardial infarction.

**Adverse Events:** Implantation of the ICD, like that of any other device, involves risks, some possibly life-threatening. These include but are not limited to the following: acute hemorrhage/bleeding, air emboli, arrhythmia acceleration, cardiac or venous perforation, cardiogenic shock, cyst formation, erosion, exacerbation of heart failure, extrusion, fibrotic tissue growth, fluid accumulation, hematoma formation, histotoxic reactions, infection, keloid formation, myocardial irritability, nerve damage, pneumothorax, thromboemboli, venous occlusion. Other possible adverse effects include mortality due to: component failure,

device-programmer communication failure, lead abrasion, lead dislodgment or poor lead placement, lead fracture, inability to defibrillate, inhibited therapy for a ventricular tachycardia, interruption of function due to electrical or magnetic interference, shunting of energy from defibrillation paddles, system failure due to ionising radiation. Other possible adverse effects include mortality due to inappropriate delivery of therapy caused by: multiple counting of cardiac events including T waves, P waves, or supplemental pacemaker stimuli. Among the psychological effects of device implantation are imagined pulsing, dependency, fear of inappropriate pulsing, and fear of losing pulse capability.

Refer to the User's Manual for detailed indications, contraindications, warnings, precautions and potential adverse events.

### Parameter Settings

#### AF Management

|                                |                          |
|--------------------------------|--------------------------|
| AF Suppression™ Pacing         | On; Off                  |
| No. of Overdrive Pacing Cycles | 15-40 in steps of 5      |
| Maximum AF Suppression Rate    | 80-150 min <sup>-1</sup> |

#### Sensing/Detection

|                                   |                                                                                                                                                                                                                                    |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SenseAbility™ Technology          | Automatic Sensitivity Control adjustment for atrial and ventricular events                                                                                                                                                         |
| Low Frequency Attenuation         | On; Off                                                                                                                                                                                                                            |
| Threshold Start                   | (Post-Sensed; Atrial) 50; 62.5; 75; 100%;<br>(Post-Paced; Atrial) 0.2-3.0 mV;<br>(Post-Sensed; Ventricular) 50; 62.5; 75; 100%;<br>(Post-Paced; Ventricular) Auto; 0.2-3.0 mV<br>(Post-Sense/Post-Pace; Atrial/Ventricular) 0-220  |
| Decay Delay                       | 125; 157                                                                                                                                                                                                                           |
| Ventricular Sense Refractory (ms) | 3 zone programming - 1 zone, 2 zones or 3 zones (VT-1; VT-2; VF)                                                                                                                                                                   |
| Detection Zones                   | AV Rate Branch; Arrhythmia Onset (Chamber Onset or Sudden Onset);<br>Interval Stability; AV Association; Morphology Discrimination<br>(Far Field MD or Original MD) with Manual (original MD only)<br>or Automatic Template Update |
| SVT Discriminators                | Detection, discrimination and diagnostics, no therapy delivery (VT or VT-1 zone)                                                                                                                                                   |
| Monitor Mode                      | On; Passive; Off                                                                                                                                                                                                                   |
| Discrimination modes              | On; Passive; Off                                                                                                                                                                                                                   |
| SVT Threshold                     | 150-240 min <sup>-1</sup>                                                                                                                                                                                                          |
| SVT Timeout                       | 0.25-5 min                                                                                                                                                                                                                         |
| Reconfirmation                    | Continuous sensing during charging                                                                                                                                                                                                 |
| Lead Noise Discrimination         | SecureSense™ RV lead noise discrimination<br>(On; On with Timeout; Passive; Off)                                                                                                                                                   |

#### Antitachycardia Pacing Therapy

|                              |                                                                                |
|------------------------------|--------------------------------------------------------------------------------|
| ATP Configurations           | Ramp; Burst; Scan; 1 or 2 schemes per VT zone                                  |
| ATP in VF Zone               | ATP While Charging; ATP Prior to Charging; Off                                 |
| ATP Upper Rate Cutoff        | 150 - 300 min <sup>-1</sup>                                                    |
| Burst Cycle Length           | Adaptive; Readaptive or Fixed                                                  |
| Min. Burst Cycle Length (ms) | 150-400 in increments of 5                                                     |
| Number of Bursts             | 1-15                                                                           |
| Number of Stimuli            | 2-20                                                                           |
| Add Stimuli per Burst        | On; Off                                                                        |
| ATP Pulse Amplitude (V)      | 7.5 Independent from Bradycardia and Post-Therapy Pacing                       |
| ATP Pulse Width (ms)         | 1.0 or 1.5 Independently programmable from Bradycardia and Post-Therapy Pacing |

#### High-Voltage Therapy

|                           |                                             |
|---------------------------|---------------------------------------------|
| DynamicTx™ Algorithm      | On; Off                                     |
| DeFT Response™ Technology | Programmable pulse width for P1/P2 and tilt |
| High-Voltage Output Mode  | Fixed Pulse Width; Fixed Tilt               |
| Waveform                  | Biphasic; Monophasic                        |
| RV Polarity               | Cathode (-); Anode (+)                      |
| Electrode Configuration   | RV to Can; RV to SVC/Can; RV to SVC         |

#### Bradycardia Pacing

|                                        |                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Implantable Cardioverter Defibrillator (ICD) Devices

|                                                        |                                  |
|--------------------------------------------------------|----------------------------------|
| Auto Mode Switch (AMS)                                 | Off; DDI(R); VVI(R)              |
| Atrial Tachycardia Detection Rate (min <sup>-1</sup> ) | 110-300                          |
| AMS Base Rate (min <sup>-1</sup> )                     | 40; 45;...135                    |
| Auto PMT Detection/Termination                         | Atrial Pace on PMT; Off; Passive |
| Rate Responsive PVARP/VREF                             | Off; Low; Medium; High           |
| Ventricular Intrinsic Preference (VIP™)                | Off; On (50-200)                 |

### Post-Therapy Pacing (Independently programmable from Bradycardia and ATP)

|                                           |                                 |
|-------------------------------------------|---------------------------------|
| Post-Shock Pacing Mode                    | Off; AAI; VVI; DDI; DDD         |
| Post-Shock Base Rate (min <sup>-1</sup> ) | 30-100 in increments of 5       |
| Post-Shock Pacing Duration (min)          | Off; 0.5; 1; 2.5; 5; 7.5; or 10 |

### Device Testing/Induction Methods

|                                           |                                            |
|-------------------------------------------|--------------------------------------------|
| DC Fibber™ Pulse Duration (sec)           | 0.5-5.0                                    |
| Burst Fibber Cycle Length (ms)            | 20-100                                     |
| Noninvasive Programmed Stimulation (NIPS) | 2-25 stimuli with up to three extrastimuli |

### Patient Notifiers

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## MRI Scan Restrictions

Different leads and MRI pacing modes can result in different MRI conditions. Use the most restrictive of each category (whole body SAR and Scan Zone Restrictions) to determine the applicable MRI condition for the total system.

| Lead Model                             | Whole Body SAR | Scan Zone Restrictions                                                                                                                    |

Durata™

## Defibrillation Lead

## Product Highlights

- Allows patients to safely undergo an MRI scan when used in combination with an SJM MRI Ready device.<sup>1,2</sup>
- Optim™ insulation is a chemical co-polymer that offers superior handling and durability<sup>3</sup>
- Two innovative designs are intended to help prevent tissue ingrowth – flat-wire technology provides a low profile for the defibrillation coils, and silicone backfilling completely fills the shock coil space
- Redundant conductors serve as a backup system in the unlikely event of a conductor failure
- Symmetrically aligned cables within the lead body and centrally located coil provide for additional protection to the inner coil<sup>4</sup>
- The DF4 connector is designed to simplify implants by streamlining defibrillation connections into a single terminal pin and reducing the number of set screws

## Ordering Information

Contents: Defibrillation lead

| Model Number | Insulation | Fixation      | Min. Introducer (F) | Shock Configuration | Sensing      | Tip-to-Proximal Coil (cm) | Connector | Lengths (cm) |

\*Indicates models and lead lengths that are MRI Conditional<sup>1,2</sup>

**Indications for Use:** The Durata™ transvenous leads are indicated for use with compatible pulse generators (refer to the applicable defibrillator manual for system indications). They provide pacing and sensing and deliver cardioversion/defibrillation therapy to the heart. A transvenous lead system may offer the patient the benefit of avoiding a thoracotomy for lead implantation. If the initial lead configuration is not effective, repositioning of the lead or other lead configurations should be attempted. In some patients, a nonthoracotomy lead configuration may not provide reliable conversion of arrhythmias, and the use of subcutaneous or epicardial patch defibrillation leads should be considered.

**Contraindications:** Contraindications for use of the Durata leads with an implantable pulse generator include ventricular tachyarrhythmias resulting from transient or reversible factors such as drug toxicity, electrolyte imbalance, or acute myocardial infarction. Transvenous lead systems are contraindicated for patients with tricuspid valvular disease or a mechanical heart valve. Durata leads are contraindicated for patients for whom a single dose of 1.0 mg of dexamethasone sodium phosphate is contraindicated. The Durata leads are contraindicated for extra firm (red color knob) stylets. The lead is not designed, sold, or intended for use other than as indicated.

1. St. Jude Medical DF1 lead connectors conform to the international connector standard ISO 11318/Amd.  
2. St. Jude Medical IS-1 lead connectors conform to the international connector standard ISO 5841.  
3. St. Jude Medical DF4 lead connectors conform to the international connector standard ISO 27186: 2010 (E).

**Potential Complications:** Possible complications of the use of transvenous lead systems include, but are not limited to, supraventricular or ventricular arrhythmias, conduction disturbances, cardiac perforation, cardiac tamponade, loss of contractility, air embolism, heart wall rupture, myocarditis, post-operative heart failure, chronic mechanical stimulation of the heart, tricuspid valve dysfunction, lead fracture necessitating surgical removal, pneumothorax, hemothorax, infection, tissue necrosis and erosion of the skin. Specific events and effects are summarised below:

**WARNING:** Implanted cardiac leads are subjected to a hostile environment within the body due to constant, complex flexural and torsional forces, interactions with leads and/or the pulse generator, or other forces associated with cardiac contractions and patient physical activity, posture and anatomical influences. Cardiac leads' functional lifetimes can be affected by these and other factors.

Refer to the defibrillator manual for additional complications and precautions specific to the pulse generator.

## Tendril™ STS

## Pacing Lead

## Product Highlights - Pacing Lead

- The Tendril STS lead allows patients to undergo MRI scans when used in conjunction with a MRI Ready pacemaker from St. Jude Medical
  - Allows MRI scans (See Parameter Settings for scan exclusion zone)
  - Permits a maximum whole body averaged specific absorption rate (SAR) of 2 watts per kilogram (W/kg)
- Soft silicone tip offers more compliance and less tip pressure at the lead tip-endocardium interface
- Small diameter lead offers improved ease of venous passage, reduced risk of venous thrombosis or rib-clavicle crush and ability to accommodate additional leads more easily
- Optim™ lead insulation—a chemical co-polymer that blends the best features of polyurethane and silicone for improved handling and increased durability
- Titanium nitride (TiN) fractal coating on the tip and ring electrodes is designed to promote precise sensing and to provide improved contact with the myocardium
- Lubricious Fast-Pass™ coating facilitates lead insertion through the introducer and veins to ease implantation
- Fits through a 6 F introducer

## Ordering Information - MRI-Ready Pacing System

| PM2272       | Assurity MRI Pacemaker   | 47 x 50 x 6                | 20         | 10,4 (± 0,5) | IS-1      |

**Indications:** Tendril™ STS lead is designed for permanent sensing and pacing in either the right atrium or the right ventricle, in combination with a compatible device. Active leads such as the Tendril STS lead may be indicated for patients where permanent fixation of passive leads is suspected to be unstable.

In atrial applications, the use of screw-in leads such as Tendril STS lead may be indicated in the presence of an abnormal, surgically altered or excised atrial appendage.

**Contraindications:** Tendril STS lead is contraindicated: in the presence of tricuspid atresia, for patients with mechanical tricuspid valves, in patients who are expected to be hypersensitive to a single dose of one milligram of dexamethasone sodium phosphate.

**Adverse Events:** Potential complications associated with the use of Tendril STS lead are the same as with the use of other active fixation leads and include: cardiac tamponade, diaphragmatic stimulation, embolism, excessive bleeding, induced ventricular ectopy, infection, loss of pacing and/or sensing due to dislodgment or mechanical malfunction of the pacing lead, phrenic nerve stimulation, thrombosis. Complications reported with direct subclavian venipuncture include pneumothorax, hemothorax, laceration of the subclavian artery, arteriovenous fistula, neural damage, thoracic duct injury, cannulation of other vessels, massive hemorrhage and, rarely, death.

Refer to the User's Manual for detailed indications, contraindications, warnings, precautions and potential adverse events.

## EU Quality Management System Certificate (MDR)

Pursuant to Regulation (EU) 2017/745 on Medical Devices, Annex IX Chapters I and III  
(Implantable Class IIb Devices and Class III Devices)

**No. G12 014607 0255 Rev. 00**

**Manufacturer:****Abbott Medical**

15900 Valley View Court  
Sylmar CA 91342  
USA

**SRN Manufacturer:**

US-MF-000010383

**Authorized  
Representative:**

Abbott Medical  
The Corporate Village, Da Vincilaan 11 Box F1, 1935 Zaventem,  
BELGIUM

The Certification Body of TÜV SÜD Product Service GmbH certifies that the manufacturer has established, documented and implemented a quality management system as described in Article 10 (9) of the Regulation (EU) 2017/745 on medical devices. Details on device categories covered by the quality management system are described on the following page(s).

The Report referenced below summarises the result of the assessment and includes reference to relevant CS, harmonized standards and test reports. The conformity assessment has been carried out according to Annex IX Chapter I and III of this regulation with a positive result.

The certified quality management system is subject to periodical surveillance by TÜV SÜD Product Service GmbH.

In order to place the devices on the market with CE-marking, an EU Technical Documentation Assessment Certificate pursuant to Annex IX chapter II is necessary in addition to this EU Quality Management System Certificate. All applicable requirements of the testing and certification regulation of TÜV SÜD Group have to be complied with.

BELGIUM

The Certification Body of TÜV SÜD Product Service GmbH certifies that the manufacturer has drawn up and presented a Technical Documentation according to Annex II and III of the Regulation (EU) 2017/745 on medical devices. Details on devices covered by the Technical Documentation are described on the following page(s). The Report referenced below summarises the result of the assessment and includes reference to relevant CS, harmonized standards and test reports. The technical documentation assessment included an assessment of the clinical evaluation assessment. The conformity assessment has been carried out according to Annex IX chapter II of this regulation with a positive result.

Changes to the approved device, where such changes could affect the safety and performance of the device or the conditions prescribed for use of the device, shall require approval from the notified body TÜV SÜD Product Service GmbH. In order to place the devices on the market with CE-marking, an EU Quality Management System Certificate pursuant to Annex IX chapters I and III is necessary in addition to this EU Technical Documentation Assessment Certificate. All applicable requirements of the testing and certification regulation of TÜV SÜD Group have to be complied with.

| <b>Intended Purpose:</b> | The Implantable Cardioverter Defibrillator (ICD) devices are primarily intended for use with compatible leads to detect and treat life threatening ventricular arrhythmias by providing ventricular antitachycardia pacing, and ventricular cardioversion/defibrillation. In addition, ICD devices can detect and treat <ul style="list-style-type: none"> <li>• chronic symptomatic bradyarrhythmia by providing sensing and pacing in the right ventricle</li> <li>• various atrioventricular conduction abnormalities by providing sensing and pacing in the right ventricle and/or right atrium</li> </ul>  |
| <b>Device(s):</b>        | Fortify™ VR, Fortify Assura™ VR, Ellipse™ VR. For device variants/models and parameters please see model list no. 1 at the end of the certificate.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## EU Technical Documentation Assessment Certificate (MDR)

Pursuant to Regulation (EU) 2017/745 on Medical Devices, Annex IX Chapter II  
(Implantable Class IIb Devices and Class III Devices)

**No. G70 014607 0257 Rev. 00**

**Classification:** III  
**Device Group:** J010503 - IMPLANTABLE TRIPLE CHAMBER DEFIBRILLATORS  
**Basic UDI-DI:** 5415067HVD0001GT  
**Intended Purpose:** The Cardiac Resynchronization Therapy Defibrillator (CRT-D) devices are primarily intended for use with compatible leads to detect and treat life threatening ventricular arrhythmias by providing ventricular antitachycardia pacing, and ventricular cardioversion/defibrillation. In addition, these devices can detect and treat chronic symptomatic bradyarrhythmia by providing sensing and pacing in the right ventricle and various atrioventricular conduction abnormalities by providing sensing and pacing in the right ventricle and/or right atrium. CRT-D devices sense cardiac activity and provide pacing to resynchronize the right and left ventricles.

**Device(s):** Unify™, Unify Quadra™, Quadra Assura™, Quadra Assura MP™, Unify Assura™. For device variants/models and parameters please see model list no. 3 at the end of the certificate.

# Certificate

No. Q5 014607 0231 Rev. 03

**Holder of Certificate:** **Abbott Medical**  
15900 Valley View Court  
Sylmar CA 91342  
USA

**Certification Mark:**

**Scope of Certificate:** **Design and Development, Production and Distribution of Implantable Pulse Generators and Implantable Cardioverter Defibrillators, Implantable Leads for AIMDs, Programmers for AIMDs, Application Software (external), Cardiac Rhythm Management Device Accessories (adapters, stylets, guidewires, tools, etc.)**

The Certification Body of TÜV SÜD Product Service GmbH certifies that the company mentioned above has established and is maintaining a quality management system, which meets the requirements of the listed standard(s). All applicable requirements of the testing and certification regulation of TÜV SÜD Group have to be complied with. For details and certificate validity see: [www.tuvsud.com/ps-cert?q=cert:Q5 014607 0231 Rev. 03](http://www.tuvsud.com/ps-cert?q=cert:Q5 014607 0231 Rev. 03)

**Report No.:** 713237689

**Valid from:** 2022-08-12  
**Valid until:** 2025-03-31

**Date,** 2022-08-12

Christoph Dicks  
Head of Certification/Notified Body

# Certificate

No. Q5 014607 0231 Rev. 03

**Applied Standard(s):** EN ISO 13485:2016  
Medical devices - Quality management systems -  
Requirements for regulatory purposes  
(ISO 13485:2016)  
DIN EN ISO 13485:2016

**Facility(ies):** Abbott Medical  
15900 Valley View Court, Sylmar CA 91342, USA

Design and Development, Production and Distribution of  
Implantable Pulse Generators and Implantable Cardioverter  
Defibrillators, Implantable Monitoring and Recording Systems,  
Implantable Leads for AIMDs, Programmers for AIMDs,  
Application Software (external), Cardiac Rhythm Management  
Device, Accessories (adapters, stylets, guidewires, tools, etc)

Abbott Medical  
645 Almanor Avenue, Sunnyvale CA 94085, USA

Design and Development of Implantable Pulse Generators and  
Implantable Cardioverter Defibrillators, Implantable Monitoring and  
Recording Systems, Implantable Leads for AIMDs, Programmers  
for AIMDs, Application Software (external), Cardiac Rhythm  
Management Device Accessories (adapters, stylets, guidewires,  
tools, etc.); and returned product analysis of Implantable  
Cardioverter Defibrillators, Implantable Monitoring and Recording  
Systems and Cardiac Rhythm Management Device Accessories

# CERTIFICATE

This is to certify that

**SANTE**  
INTERNATIONAL S.A.

**SANTE INTERNATIONAL S.A.**

Str. Mantuleasa nr. 33, Sector 2  
023961 Bucuresti  
Romania

has implemented and maintains a **Quality Management System**.

Scope:

Import, trade and storage of medical and laboratory equipment, disinfectants, laboratory reagents, cardiovascular surgery devices, service for medical and laboratory equipment. Consulting for state and private medical units.

Through an audit, documented in a report, it was verified that the management system fulfills the requirements of the following standard:

**ISO 9001 : 2015**

Certificate registration no. 497269 QM15  
Valid from 2021-06-16  
Valid until 2024-06-15  
Date of certification 2021-06-16

**DQS GmbH**

Markus Bleher  
Managing Director
