**General description**

**Description of the device**

**This catheter includes:**  
 - An internal needle guide with a transparent hub to visualise the blood reflux when puncturing.  
 - A transparent PTFE catheter tube with tapered distal end. The hub of the catheter includes fixation wings and a lateral injection valve (silicone) which is used for intermittent injections with a syringe. This lateral injection valve includes as well a colour coded cap according to the catheter's diameter. The colour code respects the ISO 10555 standards.  
 The proximal end of the hub (female Luer-lock connector normalised) permits the connection to perfusion or transfusion devices.
