Narrative description of project: In the first step, an assessment of the current SLI platform conducted to fully evaluate the existing system. This includes the assessment of the necessity of developing a new platform. The next step is to conduct a feasibility study and design of a new platform. Apart from the general guides described below, the design of a new platform should ensure that it is (a) compatible with the existing platform; and (b) extendable with other IT systems of relevant government institutions (such as CNAS). This includes the feasibility of migrating the existing platform data to the new one. The final step is to develop and implement selected components of the new platform. This step will also include training for SLI staff for the maintenance and update of the platform.	
Description of actual services provided by your staff within the assignment: Design, development, testing, piloting of the RBSA_IT platform: Private application; Accident reporting platform; Complaint management platform; E-learning platform; Knowledge platform; Activity reports platform; Database development; Data migration; Training.
