

226 SAMPLE COLLECTION DEVICE

# 100% cotton linter fiber filter paper designed to hold bio-samples

OVERVIEW

## NEWBORN SCREENING

226 Sample Collection Device is a 100% pure cotton linter fiber paper validated for even and uniform sample distribution. This feature delivers reliable and homogenous analytical results from across the dried sample area. Being chemical free adds a level of safety and testing purity. Desiccation is not required before and/or after your sample has been applied in most situations. Simply apply your sample, allow it to dry completely, and then you are ready to ship or analyze.

We can custom-print and convert the Grade 226 Paper into a device form that meets your specialized requirements. Our capabilities also include printing barcodes and serialized numbers onto your devices to make them unique and traceable.

## DBS Sample Collection

## Custom Printing

Our capabilities:

We can custom manufacture and print the 226 Sample Collection Devices to meet your needs including bar-coding & serialization for traceability and kit assembly

Laboratory Equipment no matter your size or sophistication

More Newborn Screening Instruments

### GSP® Instrument

Automated platform for screening of Newborn screening disorders, the GSP® Newborn screening system offers outstanding screening accuracy and reliability, coupled with high efficiency and user-friendliness.
