

MUTARS[®] PRS

Pelvic Reconstruction Shell

MUTARS® PRS is a cementless, spherical, pole-flattened reconstruction shell, which is used for extended cavitory or segmental acetabular defects according to Paprosky up to type 3a.

compatibility

ECOFIT® 2M cup cemented, PE-cup Mueller II cemented, **EPORE®** acetabular spacer, **EPORE®** Buttress augmentments

screw options

9 bore holes for spongiosa screw flat head Ø 6,5 mm and 3 bore holes for cancellous screw Ø 8 mm

size range

52 - 72 mm in 4 mm steps

anchorage

equatorial PressFit and boneside **EPORE®** structure

EPORE® is an additively manufactured, highly porous structure made of titanium alloy (TiAl₆V₄). This material is particularly suitable because it is biologically inert, ductile and has a high corrosion resistance and fatigue strength.

EPORE® was developed to produce a high porosity with a low modulus of elasticity. It has a very high similarity to bone structure which favors the ingrowth of the implant into the bone.

mechanical properties

porosity: 61 ± 8%
rod thickness: 360 ± 50 µm
spec. E-Module: 3,1 ± 0,6 GPa
