静脉采血针对比说明

Comparison And Explanation

静脉采血针（市场常用普通型）

Vein blood collection needle (common)

非无菌采血管普遍使用，产品不具有防逆流功能，采集血样时有血样或含有试剂血样有逆流进入人体的风险。

Non-sterile blood vessels are commonly used. The products do not have anti-counter-flow function, considering that there is a risk that blood samples or blood samples containing reagents reflux into the human body when blood samples are collected.

产品静脉采血端不具有防针刺功能，使用后处理时易出现刺伤医护人员造成交叉污染而传染病变。

The venous blood collection end of the product does not have the function of preventing puncture, and it is easy to cause cross-contamination and infectious diseases caused by stabbed medical staff during post-treatment.

产品采血管对接端不含有双重保护帽，医护人员在拿取产品时经常被针管穿出胶套而刺伤。

There is no double protective cap at the butt end of the blood vessel collection, and the medical staff is often stabbed when the needle goes through the rubber sleeve while taking the product.

防逆流防针刺静脉采血器

Anti countercurrent and anti acupuncture venous blood sampler

具有良好的防逆流功能，对采血时因真空管无负压或人体体质不同或采血管放置高低不同等产生的血液回流能有效阻止，避免对使用者造成伤害。更符合国家食药局器械采血器指导原则要求。

It has a good anti-counter-flow function, and can effectively prevent the backflow of blood due to the absence of negative pressure in the vacuum tube or the difference in the body constitution or the difference in the height of the blood collection vessel, so as to avoid injury to users. It is more in line with the guiding principles of blood collection instrument of the state food and drug administration.

使用完毕后，拨动回弹装置，静脉穿刺针管回缩至安全腔体内，有效避免针刺伤害。符合人体安全标准。

After use, if pulling the rebound device, you will find the venipuncture needle tube retract into the safe cavity, effectively avoiding the harm of acupuncture and meeting the safety standard of medical devices.

避光式双重保护帽，有效避免医护人员拿取时产生的针刺伤害，也有效保护产品运输、挤压、阳光照射造成针管或胶套丧失功能风险。

The light-proof double protective cap can effectively avoid the needling injury when medical staff take the product, and also effectively protect the product from the risk of losing the function of the needle tube or rubber sleeve caused by transportation, extrusion and sunlight.
