ABOUT US

| Our Story |

Vitrosens Biotechnology Inc., founded in Türkiye, has brought together R&D, production, and sales, since our establishment, to provide and develop accurate, game-changing in vitro diagnostic solutions. The company is a leading diagnostics firm committed to advancing science and improving the world through innovative technologies and groundbreaking research.

Our company operates the largest rapid test kit facility in Türkiye, and our manufacturing processes are carried out under ISO 13485: 2016 compliant quality systems. Our quality management systems have a Medical Device Single Audit Program (MDSAP) standards. The company's success is founded on our expertise in molecular biology, genetics, in-vitro-diagnostic (IVD), and point-of-care testing (POCT).

| Quality Standards |

The Medical Device Single Audit Program enables an Auditing Organization recognized by MDSAP to perform a sole regulatory audit for a medical device manufacturer, meeting the applicable requirements of the regulatory authorities involved in the program.

ABOUT US

R&D CENTER

In 2016, our company took the establishment steps, it became a Research and Development (R&D) Centre by obtaining approval from the relevant ministry in Türkiye. Our company, which has focused on the importance of research and development since its establishment, makes all its investments in this direction.

Academic and Clinical Partnerships

Located in Türkiye and abroad,

- Collaboration with recognized universities
- Product-performance evaluation cooperation with veterinary clinics for **Animal Health Division**
- Collaboration with specialized laboratories and hospitals in the field of **Human Health Division**

PRODUCT & DEVICE DEVELOPMENT

Our product development department is constantly working on the development of rapid test cassettes and diagnostic devices using high-innovation technology.

- Test cassette design, molding and plastic injection
- Molecular Diagnostic Instruments: Real-Time PCR and Nucleic Acid Extraction device
- Immunofluorescence Instruments: Europium (3+) Based System
- Software Development: In house software application for our devices
- Main-board and circuit design

**Special Device
Design**

**Designed digital
print on cassettes**

**Production of
electronical main-board**

PRODUCTION

In co-operation with our successful R&D department, we produce at high standards in our **6000m² production area**. We take care to produce by keeping biosecurity at high levels with our **Clean Room** standard with ISO 14644 **Class 8** certificates. Our factory has the opportunity to work **7/24** if necessary to provide the best service to our valued partners.

ENVIRONMENTAL SUSTAINABILITY

Vitrosens Biotechnology, we are dedicated to restricting our plastic usage to preserve environmental resources, promote **sustainable** development, and minimize the **ecological impact** of our products by safeguarding ecosystems. Our distinctive approach is evident in the production of our biobased cassettes. These **bio-based cassette** are designed to be sustainable and **bio-degradable**. Serving as an environmentally friendly alternative to mass-produced plastic test cassettes, our commitment to **eco-friendly production** is strongly upheld under the **ISO 14001** standards we adhere to.

IMMUNOCHROMATOGRAPHY TECHNOLOGY

| Colloidal Gold Nanoparticles |

From the beginning, Vitrosens Biotechnology had the mission of developing diagnostic solutions and being developed as a part of these solutions. During our path to following this mission over the years, we developed our in-house colloidal gold nanoparticles, the core material for the developed technology, in the size of 40nm (Fig.1). We successfully integrated them into our rapid diagnostic solutions.

In-house produced Colloidal Gold Nanoparticles are characterized by using UV-Vis Spectrophotometry (Fig.2), Dynamic Light Scattering (DLS) (Fig.3), and Transmission Electron Microscope (TEM) imaging (Fig.4).

In-house Colloidal Gold Nanoparticle Advantages:

1. **Custom-Engineering:** Ensuring the flexibility to manage quality and performance
2. **Enhanced Accuracy:** Higher sensitivity and specificity.
3. **Large-Scale Capacity:** Maximizing the production capacity and minimizing error rate.

Fig.1

Fig.2

Fig.3

Fig.4

| Latex Beads |

Our second most-used material in immunochromatography is the latex beads (200, 300 nm) (Fig.5), which give the advantages below:

1. **Enhanced Sensitivity:** The large surface area of latex beads increases the attachment area of target molecules.
2. **Flexible in Color:** Latex beads can be dyed in various colors, which ensures the Double-Colored LFA technology (Fig.6) and Triple-Colored LFA technology (Fig.7).

Fig.5

| Rapid Diagnostic |

Our rapid kit are diagnostic devices designed to provide the best performance most simply. As Vitrosens Biotechnology, our rapid test portfolio mainly covers the diagnosis of gastrointestinal, and respiratory tract infections, tumor markers, and sexually transmitted diseases.

Easy-To-Use

Result In
2-15 Minutes

Reliable

Easy To
Interpret

Features

- Easy to use and interpret in several strip tests
- No need for special equipment
- Intended for single use
- Cost-effective
- Wide range of applications
- Regulatory compliance
- Minimize risk of error in result interpretation

| Test Formats |

- Employ a singular device to conduct a variety of tests using a sole sample.
- Streamline the testing process with a single sample, minimal preparation, and the capability for panel testing.
- Diagnose multiple analytes swiftly, achieving results in a few minutes.
- Mitigate the risk of mishandling results through a design that reduces the likelihood of errors.
- Enhance operational efficiency with a testing system designed for seamless and rapid execution.

SEXUALLY TRANSMITTED DISEASES

Sexually Transmitted Diseases (STDs) usually do not cause any symptoms, which makes them difficult to detect. The lack of symptoms, especially in the early stages of infection, causes detection difficulties and underlines the importance of regular screening and testing, especially for sexually active individuals. Our Sexually Transmitted Disease Solutions focus on the following pathogens:

Viruses

- Human Papillomavirus (HPV)
- HIV/AIDS
- Hepatitis A
- Hepatitis B
- Hepatitis C
- Hepatitis E

Bacterias

- Chlamydia
- Gonorrhea
- Syphilis

Protozoan parasite

- Trichomoniasis

over 1 million
new cases per day in adults 15 to 49 in 2020

Multiple results with a single sample.

Chlamydia/Gonorrhea + Trichomonas Vaginalis

The RapidFor™ CT/NG + TV Combo Rdapid Test Kit is a diagnostic tool designed for the simultaneous detection of *Chlamydia trachomatis*, *Neisseria gonorrhoeae* and *Trichomonas Vaginalis*, three common sexually transmitted infections (STIs). This combo test kit is intended to provide quick and convenient results, within a short period, allowing for timely diagnosis and treatment.

RESPIRATORY DISEASES

Respiratory diseases are caused by various microorganisms that infect the respiratory tract. These pathogens can infect various parts of the respiratory system, including the upper respiratory tract (nose, throat, and sinuses) and the lower respiratory tract (lungs and airways). Our Respiratory Diagnostic Solutions focus on the following pathogens:

Viruses

- Influenza Viruses
- Respiratory Syncytial Virus (RSV)
- Coronaviruses
- Adenovirus (ADV)
- Human metapneumovirus (hMPV)

Bacteria

- *Streptococcus pyogenes*
- *Mycoplasma pneumoniae*
- *Legionella pneumoniae*
- *Streptococcus pneumoniae*

SARS-CoV-2 + FLU A/B + RSV + hMPV

The SARS-CoV-2 + FLU A/B + RSV + hMPV Combo Rapid Test refers to a combination test designed to simultaneously detect multiple respiratory viruses, including the SARS-CoV-2 virus responsible for COVID-19, influenza A and B viruses, Respiratory Syncytial Virus (RSV) and Human metapneumovirus (hMPV). This type of combo test is commonly used to assess or diagnose respiratory infections, especially during seasons when these viruses are prevalent.

GASTROINTESTINAL DISEASES

Gastrointestinal diseases refer to a group of disorders that affect the digestive system, which includes the stomach, intestines, liver, gallbladder, and other associated organs. These diseases can affect people of all ages and can range from mild to severe. Early detection and management can significantly improve outcomes for many gastrointestinal conditions. Our Gastrointestinal Disease Solutions focus on the following pathogens:

Viruses

- Rotavirus
- Adenovirus
- Norovirus
- Astrovirus
- Enterovirus

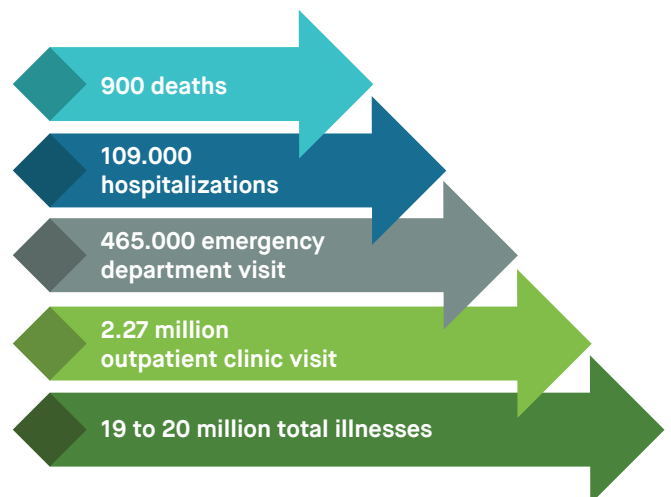

Bacteria

- *Helicobacter pylori* (*H. pylori*)
- *Salmonella Typhi*
- *Clostridioides difficile* (*C. difficile*)
- *Vibrio cholera*

Protozoans

- *Giardia Lamblia*
- *Cryptosporidium parvum*
- *Entamoeba histolytica*, *Entamoeba dispar*

CARDIAC MARKERS

Cardiac markers are substances released into the blood when the heart is damaged or stressed. These markers are commonly used in medical diagnostics, particularly in the context of cardiac conditions and events such as heart attacks. Cardiac marker testing is often performed in emergency rooms, hospitals, and clinical settings to help diagnose and assess heart-related conditions. At Vitrosens Biotechnology, we particularly focus on the following markers.

- Troponins
- Creatine Kinase-MB (CK-MB)
- Myoglobin
- Heart-Type Fatty Acid Binding Protein (H-FABP)
- N-Terminal pro-Brain Natriuretic Peptide (NT-proBNP)
- D-Dimer

The Most Commonly Used Cardiac Markers

Multiple results with a single sample.

Troponin I

The RapidFor™ Troponin I Rapid Test Kit is a diagnostic tool designed to detect the presence of troponin I in a patient's blood sample. Troponin I is a cardiac muscle protein released into the bloodstream when there is damage to the heart muscle, particularly during events such as myocardial infarction (heart attack).

TROPICAL DISEASES

Tropical diseases encompass a diverse group of infectious diseases that prevail in tropical and subtropical regions of the world. These diseases are often associated with poverty, poor sanitation, and limited access to healthcare. Our Tropical Disease Solutions focus on the following pathogens:

Viruses

- Dengue
- Chikungunya
- Zika Virus

Bacteria

- *Salmonella Typhi*

Protozoan parasite

- *Plasmodium spp.*

Distribution of Malaria cases by Africa countries

Source: World Health Organization, World Health Statistics 2023

Our innovative approach ensures **quick** and **accurate results**, facilitating timely diagnosis and **intervention** in the fight against these challenging health conditions.

Dengue NS1 Ag

The RapidFor™ Dengue NS1 Ag Rapid Test Kit is an in vitro diagnostic test designed to quickly diagnose infections caused by the dengue virus. Dengue fever is an infection caused by the dengue virus, which is transmitted through the bite of Aedes mosquitoes.

TUMOR MARKERS

Tumor markers are substances that can be detected in the blood, urine, or tissues and may indicate the presence of cancer. These markers are often produced by cancer cells or by other cells in the body in response to the presence of cancer. It's important to note that the presence of a tumor marker doesn't necessarily confirm the presence of cancer. At Vitrosens Biotechnology, we particularly focus on the following markers.

Prostate-Specific Antigen (PSA):

Associated with prostate cancer. Elevated PSA levels may indicate the presence of prostate cancer, but other conditions can also cause PSA levels to rise.

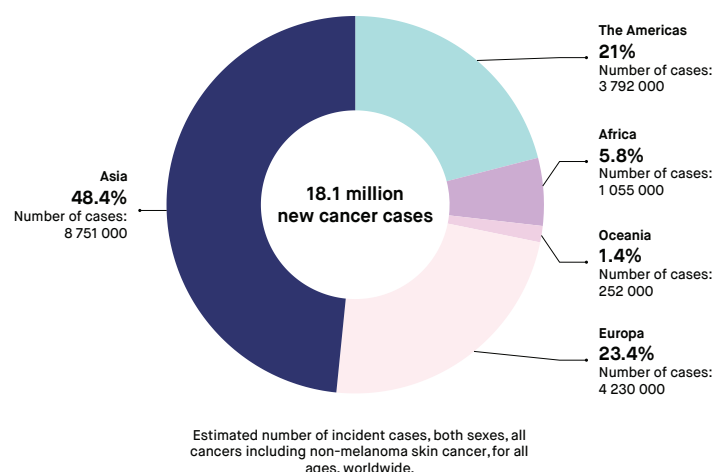

Carcinoembryonic Antigen (CEA):

Associated with colorectal cancer. Elevated CEA levels may also be found in other cancers and non-cancerous conditions.

Alpha-Fetoprotein (AFP):

Associated with liver cancer (hepatocellular carcinoma) and certain types of testicular cancer.

Global Cancer Incidence

Source: Washington DC-based American Institute of Cancer Research (AICR) and the World Health Organization.

Ensures an **effective** and promising solution for reliable detection of various **cancer indicators**, contributing to early diagnosis.

Cut off
4 ng/mL

PSA

The RapidFor™ PSA Rapid Test Kit is an in vitro diagnostic tool designed to detect the presence of prostate-specific antigen (PSA) in whole blood, serum, or plasma samples. PSA is a protein produced by the prostate gland, and elevated levels of PSA in the blood may indicate conditions such as prostate cancer or other prostate-related issues. The test is often used as a screening tool to assess prostate health.

TORCH

"TORCH" is an acronym that represents a group of infectious agents that can cause congenital (present at birth) infections. Each letter in TORCH refers to a specific infectious agent:

T - Toxoplasmosis: Caused by the parasite *Toxoplasma gondii*. Infections during pregnancy can potentially lead to birth defects.

O - Other (Varicella-Zoster, Parvovirus B19):

- Varicella-Zoster (Chickenpox): Infection during pregnancy can harm the fetus.
- Parvovirus B19: This virus can cause a fifth disease in children and can have complications during pregnancy.

R - Rubella: Also known as German measles, it is caused by the rubella virus. Infection during early pregnancy can lead to congenital rubella syndrome.

C - Cytomegalovirus (CMV): Caused by the cytomegalovirus, a type of herpesvirus. CMV infections can occur during pregnancy and may pose risks to the developing fetus.

H - Herpes Simplex Virus (HSV): Infection with herpes simplex virus, which can cause genital herpes. Neonatal herpes can occur if a mother has a primary HSV infection during late pregnancy.

Toxo IgG/IgM

The RapidFor™ *Toxoplasma* IgG/IgM Rapid Test Kit is a diagnostic tool used for the detection of antibodies against the *Toxoplasma gondii* parasite. *Toxoplasma gondii* is a microscopic parasite that can infect humans and animals, causing a condition known as toxoplasmosis.

DRUG OF ABUSE

Drug of abuse tests, commonly known as drug tests or screenings, are diagnostic tests used to detect the presence of specific substances or their metabolites in a person's body. These tests are often employed for various purposes, including workplace testing, athletic competitions, legal matters, and healthcare assessments. The most common types of drug of abuse tests include urine tests and saliva tests.

Single Cassette Test

Strip Version of Test

Single Dip-stick Test

DrugFor™ can be utilized to investigate suspected drug addiction with **three different test versions**.

Urine Multi-Drug

The DrugFor™ Urine Multi-Drug Test is a diagnostic tool designed to simultaneously detect the presence of multiple drugs or their metabolites in a urine sample. These tests are commonly used for various purposes, including workplace drug testing, clinical assessments, forensic investigations, and substance abuse treatment programs.

Urine **adulteration** test strips indicate whether a urine sample is valid to used in drug testing. The strip can give rapid and semi-quantitative detection with any 3 combination of the following 6 parameters.

• Creatinine • Nitrite • Glutaraldehyde • pH • Specific Gravity • Oxidants

Saliva Multi-Drug Test

The DrugFor™ Saliva Multi-Drug Test Cup is a diagnostic tool designed to simultaneously detect the presence of multiple drugs or their metabolites in a saliva (oral fluid) sample. The multi-drug test cups provide a convenient and non-invasive way to collect and test saliva for the presence of drugs.

Drugs and drug metabolites we can screen		
Drug	Description	Cut-off (ng/mL) for Oral Fluid Sample
 AMP AMP A	Amphetamine (AMP)	50
 BAR BAR B	Barbiturates (BAR)	50
 BZO BZO B	Benzodiazepines (BZO)	50
 BUP BUP B	Buprenorphine (BUP)	10
 COC COC C	Cocaine (COC)	50
 THC THC T	Marijuana (THC)	50
 MTD MTD M	Methadone (MTD)	50
 MET MET M	Methamphetamine (MET)	25
 MDMA MDMA M	Methylenedioxymethamphetamine (MDMA)	50
 OPI OPI O	Opiate (OPI)	40
 OXY OXY O	Oxycodone (OXY)	50
 PCP PCP P	Phencyclidine (PCP)	10
 FTY FTY F	Fentanyl (FTY)	10

SELF-TEST OPTIONS

Vitamin D

The Vitamin D Rapid Test Kit is a quick and easy way to screen for a potential vitamin D deficiency using a blood sample. Low levels of vitamin D can cause a variety of symptoms, and in severe cases may lead to a loss in bone strength.

Vitamin D Color Card

1. Conduct testing to obtain one control line (C) and one test line (T).
2. Compare the intensity of the test line (T) with the colored lines shown below.

$10 \leq x < 30$ ng/mL	
$30 \leq x < 60$ ng/mL	
$60 \leq x < 100$ ng/mL	
$100 \leq x$ ng/mL	

Box Content

- Test cassette
- Sample diluent
- Capillary dropper
- Auto-lancet
- Alcohol swab (optional)
- User manual

Ferritin

The Ferritin Rapid Test Kit is a diagnostic tool designed for the quick and convenient measurement of ferritin levels in the blood. Ferritin is a protein that stores iron in the body, and measuring its concentration is crucial for assessing iron status. Abnormal ferritin levels can indicate conditions such as iron deficiency or iron overload.

Box Content

- Test cassette
- Sample diluent
- Capillary dropper
- Auto-lancet
- Alcohol swab (optional)
- User manual

UTI - Leukocyte + Nitrite

The **UTI Strip Test (Leukocyte + Nitrite)** is a rapid chromatographic immunoassay designed for the qualitative detection of nitrite and leukocytes in urine. This self-use test allows for quick and accurate evaluation of early signs of urinary tract infections (UTIs) from the comfort of your home.

Key Features:

- **Rapid Results:** Provides results in just 2 minutes.
- **Easy to Use:** User-friendly design requires no medical expertise.
- **High Sensitivity:** Reliable performance in detecting nitrite and leukocytes.
- **At-Home Monitoring:** Convenient for self-testing in a home environment.
- **Portable and Practical:** Compact design makes it easy to use anywhere.

Box Content

- 25x Test Strip
- 1x Instruction for Use

LEUCOCYTES - Top test pad

NITRITE - Bottom test pad

Vaginal pH

The **Vaginal pH Test** is a rapid chromatographic immunoassay designed for the quantitative detection of pH levels in vaginal swab samples. This self-use test is an effective tool for assessing vaginal health and identifying potential imbalances that may indicate infections or other conditions.

Key Features:

- **Fast Results:** Obtain precise pH readings in just a few minutes.
- **Accurate Detection:** Measures vaginal pH levels for reliable health monitoring.
- **Easy to Use:** Simple design ensures effortless application without medical expertise.
- **Self-Care at Home:** Convenient for routine vaginal health checks in a private setting.
- **Portable Design:** Compact and travel-friendly for use anytime, anywhere.

Box Content

- 25x Test Strip
- 1x Instruction for Use
