1	Alle eingesetzten Prüfmittel waren zum angegebenen Prüfzeitraum gemäß eines festgelegten Kalibrierungsprogramms unseres Prüfhauses kalibriert. Sie entsprechen den in den Prüfprogrammen hinterlegten Anforderungen. Die Rückverfolgbarkeit der eingesetzten Prüfmittel ist durch die Einhaltung der Regelungen unseres Managementsystems gegeben. Detaillierte Informationen bezüglich Prüfbedingungen, Prüfequipment und Messunsicherheiten sind im Prüflabor vorhanden und können auf Wunsch bereitgestellt werden. <i>The equipment used during the specified testing period was calibrated according to our test laboratory calibration program. The equipment fulfils the requirements included in the relevant standards. The traceability of the test equipment used is ensured by compliance with the regulations of our management system. Detailed information regarding test conditions, equipment and measurement uncertainty is available in the test laboratory and could be provided on request.</i>
2	Wie vertraglich vereinbart, wurde dieses Dokument nur digital unterzeichnet. Der TÜV Rheinland hat nicht überprüft, welche rechtlichen oder sonstigen diesbezüglichen Anforderungen für dieses Dokument gelten. Diese Überprüfung liegt in der Verantwortung des Benutzers dieses Dokuments. Auf Verlangen des Kunden kann der TÜV Rheinland die Gültigkeit der digitalen Signatur durch ein gesondertes Dokument bestätigen. Diese Anfrage ist an unseren Vertrieb zu richten. Eine Umweltgebühr für einen solchen zusätzlichen Service wird erhoben. <i>As contractually agreed, this document has been signed digitally only. TUV Rheinland has not verified and unable to verify which legal or other pertaining requirements are applicable for this document. Such verification is within the responsibility of the user of this document. Upon request by its client, TUV Rheinland can confirm the validity of the digital signature by a separate document. Such request shall be addressed to our Sales department. An environmental fee for such additional service will be charged.</i>
3	Die Entscheidungsregel für Konformitätserklärungen basierend auf numerischen Messergebnissen in diesem Prüfbericht basiert auf der "Null-Grenzwert-Regel" und der "Einfachen Akzeptanz" gemäß ILAC G8:2019 und IEC Guide 115:2021, es sei denn, in der auf Seite 1 dieses Berichts genannten angewandten Norm ist etwas anderes festgelegt oder vom Kunden gewünscht. Dies bedeutet, dass die Messunsicherheit nicht berücksichtigt wird und daher auch nicht im Prüfbericht angegeben wird. Zu weiteren Informationen bezüglich des Risikos durch diese Entscheidungsregel siehe ILAC G8:2019. <i>The decision rule for statements of conformity, based on numerical measurement results, in this test report is based on the "Zero Guard Band Rule" and "Simple Acceptance" in accordance with ILAC G8:2019 and IEC Guide 115:2021, unless otherwise specified in the applied standard mentioned on Page 1 of this report or requested by the customer. This means that measurement uncertainty is not taken in account and hence also not declared in the test report. For additional information to the resulting risk based of this decision rule please refer to ILAC G8:2019.</i>
4	The report is issued electronically. It is valid in the digitally signed PDF file. You can find details on the Signature Panel, check the signature named „TUEV-RHEINLAND-DOCUMENTS“. Any printed version of this PDF file is considered as a copy, where the authenticity cannot be
5	Report history: This report is in addition to the original test report No.: HU26MNUK 001 and the following additional reports: HU26MNUK 002: Dimension of the container - Dimension 3 acc. to EN 840-1:2020, Figure 1 - which was written in the original test report (HU26MNUK 001) was changed from 560 mm to 596 mm due to administrative typo.

Absatz	EN 840-1: 2020	Messergebnisse - Bemerkungen	Bewertung								
Clause	Anforderungen - Prüfungen / Requirements - Tests	Measuring results - Remarks	Evaluation								
1	Scope										
	This European Standard specifies dimensions and design requirements of mobile waste and recycling containers with 2 wheels, with capacity up to 400 l to be used by comb lifting devices.										
2	Normative references										
	See DIN EN 840-1:2020										
3	Terms and definitions										
	See DIN EN 840-1:2020										
4	Volumes										
	This standard identifies the two classes of containers: - Class I - small size (nominal volume up to 200 l); - Class II - large size (nominal volume between 200 l and 400 l). Within the two above-mentioned classes of containers the volumes shown in Table 1 are identified. For methods of measuring capacity, see EN 840-5. The volumes shown in Table 1 correspond to mobile waste and recycling container's capacities at present used in Europe. Since there are some overlapping capacities due to the tolerances, client and manufacturer shall decide while ordering the capacity chosen. Nominal volumes different from those referenced in Table 1 can be used by agreement between user and manufacturer. The tolerance of the volumes shall be ± 10 % maximum measured according to EN 840-5. Table 2 includes examples of the most frequent assignments of classes and volumes of the containers.	Class I b – 120 liter • Wave bin 120 l	<table><tr><td>P</td><td>☒</td></tr><tr><td>F</td><td>☐</td></tr><tr><td>N/A</td><td>☐</td></tr><tr><td>N/T</td><td>☐</td></tr></table>	P	☒	F	☐	N/A	☐	N/T	☐

5	Dimensions and design																														
5.1	The design of the containers need not correspond to the drawings given in Figure 1. The functional dimensions given in Tables 3 and 4 shall be respected. For compatibility in lifting devices, the container shall correspond to its dimensions within the selected class type (Table 3, Table 4).				Dimensions correspond to Figure 1 (For dimensions, see at page 49)			P F N/A N/T	☒ ☐ ☐ ☐																						
5.2	The container shall be constructed so that when it is unloaded or loaded with a nominal load (see Clause 6), it fits on an approved compatible lifting device. It shall be automatically locked safely into the lifting device during the lifting operation. The frontal receiver shall correspond to one of the options given in Figure 2 (Form A or B).				Frontal receivers corresponds to Figure 2 (For dimensions, see at page 49)			P F N/A N/T	☒ ☐ ☐ ☐

	Scope		
	This European Standard gives the test methods for mobile waste and recycling containers according to EN 840-1 to EN 840-4. It also gives the levels to be reached during the tests or after they have been done. This European Standard is applicable to mobile waste and recycling containers with capacities up to 1 700 l.		
2	Normative references		
	See DIN EN 840-5:2020		
3	Terms and definitions		
	See EN 840-5:2020		
4	Tests		
4.1	General		
	Before and after the tests a visual inspection of the container shall be done for the purpose of: a) checking that the container is not damaged and has no visual defect; b) checking that the manufacturing characteristics of the container to be tested are those specified in the standards applying to the container according to EN 840-1 to EN 840-4; c) comparing the condition of the container before and after the sequence of the tests. After completing the tests some deformation of the container is permissible, however, it shall remain entirely functional.		
4.2	Control before the tests		
4.2.1	Visual aspects		
	No obvious damage, cracks, bubbles, large flashes or sharp edges shall be present. No surface defects (un-smooth areas; trails in colour) perceivable from a distance of 1 m by the naked eye shall be visible.	No damage, cracks or any visible deformation or sharp edges can be found on the sample.	P ☒ F ☐ N/A ☐ N/T ☐

4.2.2	Compatibility with EN 840-1 to EN 840-4		
4.2.2.1	Components		
	Body, lid, wheels and other fittings shall conform to the relevant container standard.	Please refer test report of EN 840-1, -5, -6	P ☒ F ☐ N/A ☐ N/T ☐
4.2.2.2	Sizes and dimensions		
	Functional and safety dimensions for the container and its components shall be checked according to the figures and the relevant tables of EN 840-1 to EN 840-4.	Please refer test report of EN 840-1 (For dimensions, see on page 49)	P ☒ F ☐ N/A ☐ N/T ☐
4.2.2.3	Volumes		
	The volumes of container shall be measured: a) for the body, by tank method; b) for the lid, by tank method; c) volume results in a) and b) minus any duplicated volumes. The volumes shall be within the tolerances according to EN 840-1 to EN 840-4. For containers according to EN 840-3 volume measurement by means of calculation is allowed.	The container is within the limit acc to EN 840-1:2020, Table 1.	P ☒ F ☐ N/A ☐ N/T ☐

4.2.2.4 Tank method

	The test equipment shall consist of a tank with sufficient capacity to receive the container to be tested. The test procedure is as follows: - place the empty container in a tank, the container shall not be inclined; - simultaneously fill the tank and the container with water at a temperature of $(15 \pm 5)^{\circ}\text{C}$; - measure the quantity of water inside the container. Accuracy of measurement shall be $\pm 1\%$ of the measured capacity of the container.	The container is within the limit acc to EN 840-1:2020, Table 1. <u>120 l container: 114 l – 128 l</u> Wave bin 120 l: Body: 120 l + Lid: 6 l => sum: 126 l	P ☒ F ☐ N/A ☐ N/T ☐
--	--	---	--

4.2.3 Deflection for comb lifting system

	The frontal receiver shall have a horizontal deflection of no more than: a) 1,5 % of the length of the frontal receiver for plastic; b) 0,6 % of the length for steel. For other systems the values are to be defined when the systems are standardised.	Max. allowed deflection acc. to this standard is 1,5% of P2 The deflection is under the max. allowed value for both types: Wave bin 120 l: 0 mm	P ☒ F ☐ N/A ☐ N/T ☐
--	---	---	--

4.2.4 Masses

	The tolerances on the container mass claimed are as follows: for plastic containers $\pm 5\%$ and for metal containers $\pm 10\%$.	Max allowed difference between the samples and the claimed masses: $\pm 5\%$ Measured weights (without the wheels and axle): 6,28 kg; 6,16 kg; 6,2 kg average: 6,22 kg The weights are between: 5,909 kg - 6,531 kg	P ☒ F ☐ N/A ☐ N/T ☐

4.2.5	Colour		
	The colour shall be defined and agreed between customer and supplier. For colour measurement, differences and tolerances refer to existing International Standards.		
4.2.6	Marking		
	Marking of the container shall correspond to EN 840-1 to EN 840-4.	Please refer test report of EN 840-1 (See at pages 3-4 and EN 840-1:2020, clause 9.1 on page 9)	P ☒ F ☐ N/A ☐ N/T ☐
4.3	Control after the tests		
	Not withstanding variations in deflection and sizes, it shall be possible to lift and tilt the container loaded according to 4.5 with nominal load safely on the designated lifting equipment and to move the container on its wheels.	The loaded samples were possible to lift and tilt with the lifting equipment and move on its wheels.	P ☒ F ☐ N/A ☐ N/T ☐
4.4	Conditions of the test		
	The tests shall be carried out at the following temperatures: — $T_1 = (23 \pm 5) ^\circ\text{C}$ — $T_2 = (-18_{-2}^0) ^\circ\text{C}$. The minimum duration of conditioning before testing at a test temperature T2 shall be 12 h. If the test shall be carried out outside the room conditioned at T2 it shall be carried out within 5 min after taking the test pieces from the conditioned room. If the duration of the tests is more than 5 min, then the container shall be kept in the conditioned room for at least 15 min before a new 5 min period of testing. For special purposes a temperature lower than -18 °C or higher than 23 °C can be agreed; in this case it shall be indicated in the test report.

4.5	Test load										
	For the test the containers are to be filled with ballast bags of HDPE granules of 4 kg max., with granules having a density of 0,5 kg/dm³. The test load shall be 0,4 kg/dm³ multiplied by nominal volume, but not more than 440 kg.										
4.6	Other test conditions										
	Any other test conditions shall be defined within the tests involved.										
4.7	Tests on the containers										
4.7.1	General										
	All tests shall be carried out on new containers										
4.7.2	Impact tests by ball drop										
	The ball drop test is not compulsory for steel containers. The ability of sensitive points of the container to resist impacts at low temperature shall be tested under conditions in 4.4. The 2-wheeled containers shall be placed on a concrete or steel surface in the normal position. There shall be a steel frame between the concrete surface or the steel surface and the container so that the complete area of the bottom of the container can be deflected during the test. The 4-wheeled containers shall stand on their wheels. Ball drop tests shall be carried out using a 5 kg steel cylinder, diameter 65 mm, with hemispheric end radius of 32,5 mm. The steel cylinder is guided in a vertical pipe with a slot or with holes in order to allow the air to escape during the drop. The device shall be according to Figure 1.	Drop height: 0,8 m There is no crack or broke on the samples after the drops. The containers are still waterproof.	<table><tr><td>P</td><td>☒</td></tr><tr><td>F</td><td>☐</td></tr><tr><td>N/A</td><td>☐</td></tr><tr><td>N/T</td><td>☐</td></tr></table>	P	☒	F	☐	N/A	☐	N/T	☐

	Outside of the conditioning room (see 4.4), the test shall not last more than 5 min. After this time the container shall be reconditioned for at least 15 min. After the test the following procedure shall be applied, if there is any doubt about the result: - fill the body with a water volume equal to 10 % of the maximum capacity of the body; - wait for 10 min. After 10 min, if the container leaks, it is declared to be non conforming.		
4.7.3	Impacts on an inclined plane		
	Only 4-wheeled containers shall be tested with impact on each wall of the body and on each corner to check the resistance to straining and breaking of sensitive areas, including protruding areas and fittings. The test conditions shall be: - test temperature T1= room temperature; - test load according to 4.5; - inclination of 10°(ten degrees) to the horizontal; - impact against a wall perpendicular to the moving direction; - a total of 16 impacts according to the sequence in Table 1. During the procedure the lid shall be closed. The loaded container shall be placed on a trolley with an inclination of 10°(ten degrees) (relative to the horizontal). Precautions shall be taken to avoid accidental tipping of the container during the test (see Figure C.1). Other apparatus than shown in Figure C.1 may be used if it allows the same impact and velocity conditions. The impact velocity shall be (1,85 ± 0,05) m/s when a face is tested and (1,3 ± 0,05) m/s when a corner is tested. The vertical faces of the container will be numbered from 1 to 4 and the face marked 1 being the large face fitted for the (comb) lifting system. Corners are marked 1.2, 2.3, 3.4 and 4.1. After completing the test some deformation of the container is permissible, however, it shall remain entirely functional.	2-wheeled container	P ☐ F ☐ N/A ☒ N/T ☐

4.7.4 Kerb travel (run)

Only 4-wheeled containers shall be tested for kerb travel using run tests under the following conditions:

- test shall be carried out at room temperature T1;
- test load according to 4.5;
- apparatus shall comply with Annex A;
- kerb height shall be 140 mm orthogonal to the moving direction and located at the end of the run;
- wheels are to be guided in order to be orthogonal to the kerb at the time of the impact;
- impact velocity shall be $(1,85 \pm 0,05)$ m/s;
- there shall be 4 impacts for each of the shorter ends of the container (8 in total).

After the test there shall be no permanent deformation or breakage which disturbs handling, tilting, rolling (castors move freely).

2-wheeled container

P ☐
F ☐
N/A ☒
N/T ☐

4.7.5 Kerb travel (drops)

4.7.5.1 General

Strength tests shall be carried out on 2- and 4-wheeled containers under the following conditions:

- test temperature T1 = room temperature;
- test load according to 4.5;
- height fall of 140 mm.

The container shall be lifted up to 140 mm and then dropped freely so that 2 wheels hit the ground first.

After the test there shall be no permanent deformation or breakage, which disturbs handling, tilting, rolling or safety and health (castors shall move freely).

Prüfbericht-Nr.: HU26MNUK 002

Test Report No.:

Absatz	EN 840-5:2020	Messergebnisse - Bemerkungen	Bewertung
Clause	Anforderungen - Prüfungen / Requirements - Tests	Measuring results - Remarks	Evaluation

4.7.5.2	Test conditions		
	- 2 wheels shall hit the ground; - at least 1 000 drops shall be carried out; - number of 5 drops per minute maximum; - test apparatus shall be according to Figure B.1 and B.2. After the test there shall be no permanent deformation or breakage which disturbs handling, tilting, rolling (castors move freely).	Wave 120 l: Loaded with nominal load: 48 kg Drop height: 140 mm Cycles: 1000 There is no permanent deformation or breakage which disturbing handling, tilting or rolling safely.	P ☒ F ☐ N/A ☐ N/T ☐
4.8	Stability test		
	The static stability of empty and loaded containers on a flat plane of 10° (ten degrees) to the horizontal shall be tested at first on empty containers and after that on containers filled with the nominal load. The test shall be carried out without wind. For 4-wheeled containers, the brakes, if any, could prevent them from rolling. Other arrangements shall be made to prevent containers from gliding or rolling without hindering tipping. The container shall be checked in 3 directions. a) Stability at right angles to the slope line (transversal stability): the wider part of 4-wheeled containers and the wheel's axle of 2-wheeled containers shall be parallel to the slope line. b) Longitudinal stability: the wider part of 4-wheeled containers and the wheel's axle of 2-wheeled containers shall be in the right angle to the slope line. c) Diagonal stability: the diagonal line of the container shall be parallel to the slope line. The longitudinal stability test of 4-wheeled containers includes the brake test according to 4.9.4. In consideration of all test conditions the container shall neither tip nor move.	Loaded with nominal load acc. clause 6 on page 8: 120 l – 48 kg Inclination: 10° The containers did not tip over empty, nor loaded with the nominal load, tested in the 3 required directions. 4.9	Pulling and rolling tests		
4.9.1	General		
	The aim of these tests is to check the handling and immobilisation of the containers and to fulfil the safety and health requirements for the operators. These tests shall include: - pulling tests; - wheels tests; - brake tests.		
4.9.2	Pulling tests		
	The strength required to start and maintain the container movement shall be measured (regarding the apparatus, see Figure 3). The pulling forces defined as horizontal forces in pulling direction are measured and the result shall be stated in the instructions for use. In order to get comparable results all tests shall be carried out under the following conditions: a) new container (loaded according to 4.5); b) ground shall be a plane, smooth concrete horizontal surface (slope = 1° (one degree) maximum); c) pulling force direction shall be horizontal $\pm 2^\circ$ (two degrees) to all sides; d) pulling speed shall be 0,1 m/s $\pm$ 0,005 m/s; e) pulling distance shall be 3 m minimum; f) temperature in the test area and of the tested container shall be T1; g) total tolerance range of measuring equipment shall be $\pm 3 \%$ of the measured value; h) preparation of the tested container before every test shall be: 1) 2-wheeled containers shall be in a tilted position where the strength for a handle is 20% of the force (Newton), created by the container's total permissible mass (kilograms), 2) 4-wheeled containers shall have the wheels aligned in the pulling direction. The direction block, if fitted, shall be in operation; i) tests shall be carried out 3 times. The test is passed if the maximum pulling forces according to Table 2 are not exceeded.	Pulling forces were smaller than $\leq 60\text{N}$ on the sample. The representative samples were loaded with nominal load acc. to EN 840-1, clause 5 on page 7. 4.9.3 Wheels testing

The functional qualities of the wheels over a given distance, at a defined speed, under load, with a periodical step shall be tested. It is a test specifically for the wheel.

The apparatus shall be a concrete surface horizontal circle with a diameter of 1,1 m.

The wheel is rolled in a circle. A step of 11,5 cm height is placed in the circle along a radius and allows the wheel to fall down after each 3,5 m run (1 turn). The wheel is loaded with loads according to Table 3. The test shall be carried out in turns of moving and rest.

The test shall be carried out at temperature T1.

After completing the test tyres and wheels shall remain functional.

After the test there shall be no permanent deformation or breakage, which disturbs handling, tilting, rolling. (castors shall move freely). The hub shall be fully intact with no loosening or breaking of rivets.

Certificates were provided for
⊙200mm wheels.

4.10.2	Lifting-tilting of the empty container		
	This is a preliminary test to be done after visual inspection of the container and before the other tests. The test is carried out on an empty container successively with the lid closed. A minimum of 5 lifting-tilting cycles should be completed without damage or misfunction. After completing the tests no damage on any part of the containers, lid, etc, shall be visible with the naked eye. No hindering during the cycles is allowed. If unsuccessful, the test shall be stopped.	The container fits well on the lifting device. No damage or disfunction after 5 lifting-tilting cycles.	P ☒ F ☐ N/A ☐ N/T ☐
4.10.3	Lifting-tilting of the loaded container		
	The test shall be carried out on one sample under the following conditions: - test load shall conform to 4.5. A device to prevent the test load from being ejected during the test; - test temperature T1; - at least 100 cycles shall be made. After every 10 cycles a break of 5 min is planned. After completing the test it shall be possible to safely position the container on the lifting device without lifting it by hand. The container shall be locked safely when tilting, during the cycles. After completing the test no permanent deformation or abnormal distortion of the container causing remature ageing and no changes in dimensions that would give handling and lifting difficulties shall appear.	Tested on loaded sample acc. to clause 5 on page 7: 120 l – 48 kg After 100 cycles, it is possible to handle the container safely, put it on the combs of the lifting device. There is no permanent defirmation or abnormal distortion on the containers.	P ☒ F ☐ N/A ☐ N/T ☐

4.11	Miscellaneous tests		
4.11.1	Internal stress-cracking tests (for thermo plastics only)		
	after this test mean use of inadequate material or bad processing conditions. The test shall be carried out under the following conditions: - tank large enough to include the whole container; - water bath with 2 % to 3 % in volume a strong detergent, e.g. based of nonyl-phenol-ethoxilate with a number of ethylene oxide (EO) mol greater than or equal to 9; - bath temperature of $(70 \pm 5)^{\circ}\text{C}$; - duration of the bath shall be 48 h. After the test the container shall be rinsed immediately and shall be checked visually only 6 h after the test. After completing the test no cracks or tears in sensitive areas (containers and lids) where they could extend to bring the container out of use, e.g. front rim, handles, grip hinges, wheel junctions, hinges, injection points, reinforcing ribs, rib edges shall be visible. For containers with four wheels a test of segments is allowed with segments of approximately a quarter of a square meter. For the detergent test the following critical area should be sawed from the container and should be tested in accordance with 4.11.1: - Wheel suspension (see area 1 in Figure 4): The wheel bracket is to be cut out from the bottom at a height of approx. 500 mm. All wheel suspensions including the screwed in fastening elements and the drain sleeve shall be tested. - Frontal receiver (see area 2 in Figure 4): Both corner parts are to be checked. The area should be 300 mm x 300 mm large. - Hinge area (see area 3 in Figure 4): Both corner parts are to be checked. The area should be 300 mm x 300 mm large. - Lid (see area 4 in Figure 4): An area from the hinges to the injection points is to be tested.	Used detergent: Product: FOR CLEAN Manufacturer: Bio-Circle Surface Technology GmbH 6 hours later after 48h soaking than rinsed there is no crack visible on the sample.	P ☒ F ☐ N/A ☐ N/T ☐

Figure 4 — Segments to be tested

4.11.2 Handle test

Lifting handles on 4-wheeled containers shall be tested. Lifting handles and their junction with the container shall be strong enough to avoid damage or disconnecting when they are used to lift the container up the kerb. The test shall be carried out under the following conditions:

- test temperature T1;
- test load shall conform to 4.5;
- lifting height shall be minimum 50 mm;
- test frequency shall be 5 times per minute with a number of 1 000 liftings at least.

The container shall be lifted at least 50 mm by a 50 mm wide hook which is located around the middle of the handle, and afterwards is slowly moved down to the ground. The test is carried out on one side of the container.

After the test there shall be no permanent deformation or breakage, which disturbs handling the container.

The containers have 2-wheels.

4.11.3	Corrosion test		
	The container shall be resistant to corrosion due to the state of the art. It is the task of the manufacturer to use surface treatments or materials which guarantee this performance. Bodies and lids, hot dip galvanised after completion, and other hot dip galvanised parts shall meet the requirements of EN ISO 1461. Zinc electro-plated parts shall meet the requirements of EN ISO 2081. Weldless bodies, lids and parts made out of continuously hot-dip zinc coated steel sheets shall meet the requirements of EN 10142.	Declaration was provided from TW Reifen- und Räderhandelsgesellschaft mbH about compliance with the standard of EN ISO 2081.	P ☒ F ☐ N/A ☐ N/T ☐
4.11.4	Weathering (for thermo plastics only)		
	Preparation of samples, conditions of exposures, sequence of exposures, test methods to measure performances of new and irradiated samples are defined in standards to be established by EN/TC 249. In the meantime, ISO standards may be used (see Annex E). The material tested shall contain all the components added to the basic plastic at the rate used to mold the container, stabiliser, pigments or colorants, and, if any, fillers, other plastic etc. These additives may influence the effects of weathering on the plastic. The results of weathering on plastic containers shall include: - ageing of the plastic material; - changes in colour.	Safety data sheet provided Product: CHT GRI 7016 UV LDPE Company: Chimtest Srl. 4.11.5	Test method for dome lid container (EN 840-3)		
4.11.5.1	Equipment		
	— A child mannequin, recommended to be in compliance with an appropriate European Regulation²; size corresponding to 10 years old. The child mannequin is dressed with a thin sweatshirt made of at least 90 % cotton. The child mannequin is wearing the hood. — A parallel piped-shaped plastic box (dimensions: length 600 mm x width 400 mm x height 320 mm). ²) ECE R44: European Regulation N° 44 incl. amendment 1; <i>Uniform provisions concerning the approval of retaining devices for child occupants of power-driven vehicles ('child restraints systems')</i>.		
4.11.5.2	Test method		
	The test described below shall be performed five times for each of the following three child mannequin positions in relation to the container rim: - center; - left hand side; - right hand side. The untested dome lid braked container is placed on a hard concrete plane with an inclination of 1° maximum to the horizontal. Position the legs of the child mannequin on the plastic box, such that the head and arms are inside the container for the centre position and one arm inside the container for the lateral position. Close the lid manually until it stops without any unlocking. Remove the box by device at a speed of 0,5 m/s.

5.3

Handles for pulling, pushing and manoeuvring the container shall be positioned at a height of (900^{+400}_{-25}) mm (measured in the middle of the handle) above the ground. On two wheeled containers, for containers with a volume ≥ 140 l, these handles shall have a minimum height of 800 mm in a tilted position (centre of gravity above the wheel axle). For containers less than 140 l the handles shall have a minimum height of 700 mm. On four wheeled containers vertical handles are optional. If two handles are fitted they shall be a minimum of 450 mm apart and shall cover a height range from 780 mm to 1 050 mm. 2 wheeled containers shall be filled with the test load for the test, their lids shall be closed.

Height of the handle in standing position is within the limits.

For dimensions, see at pages 50
