

STOMA CARE

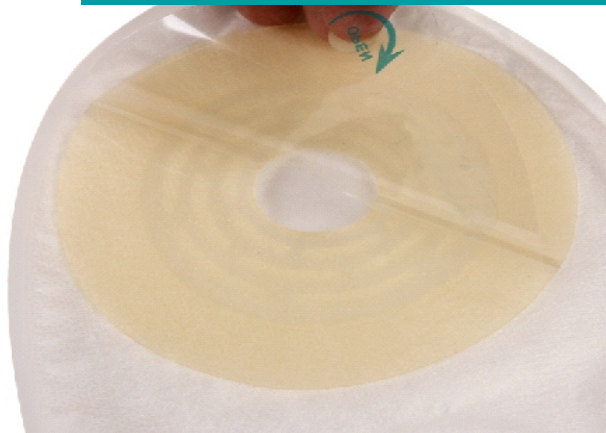

Quick search hand book

The hand book is for your quick search of conventional products. Please contact us for further information if your item was not included in this book.

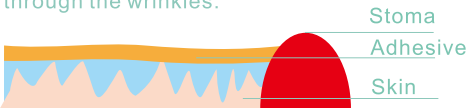

Skin High-Match Technology

Soft & comfortable

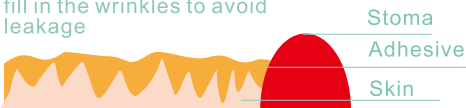

The material we use for pouch flange is very soft and comfortable. You can feel how gentle the material by a simple finger touch.

The leakage may occur through the wrinkles.

BAO-Health adhesive could fill in the wrinkles to avoid leakage

Anti-leakage

Instead of using high adhesive material, we improve the adhesive ability by increasing the adhesive area onto the skin.

Adhesive material matches to the micro-surface of the skin, enter into the wrinkles and block the leakage channels.

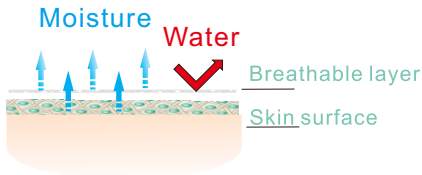

Less skin irritation will occur by the Skin High-Match technology

No hurt when peel off the pouch from skin.

Anti-maceration

BAO-Health flange adhesive has excellent water absorption ability, reach to 800%(w/w), can deal with the moisture from skin surface.

The breathable cover on the adhesive can improve the user experience ,and prevent the skin maceration.

ONE-PIECE CLOSED

FOR COLOSTOMY/STOMA CAP

Features:

- 1.Very soft hydrocolloid with high-match component;
comfortable when sticking on the body;
- 2.Lower Skin irritation;
- 3.Odor-free and noiceless pouch film;
- 4.High surface filter, allow fast air-flow, resolve balloon problem;
- 5.Thin tack nonwoven cover, touch comfortable;
- 6.Different size match to different users.

MINI POUCH
