SILICONE FOLEY BALLOON CATHETER

Fortune® Foley Integrated Balloon Catheter:

Catheter with Integrated Balloon was designed to minimize the discomfort during catheterization procedure. Compare to the ordinary balloon, due to its thickness, creates a conjunction edge after adhered onto the tubing shaft. This conjunction edge between balloon and shaft will eventually increase patient discomfort during insertion and withdrawal.

Fortune® Integrated Balloon Catheter is invented to eliminate the uneven edge out of ordinary balloon. Patented balloon is integrated into the catheter shaft, creates “complete” smooth surface. No conjunction edge between balloon and shaft is formed, which minimizes the friction within the urethra and reduced patient discomfort. Recommended usage up to 90 days for 4833 series, of which balloon is more durable! recommended usage up to 29 days for 4822/4856 series.

Advantages:

- Patented balloon integrated into the shaft.
- Complete smooth surface.
- Reduce friction within the urethra
- Reduce trauma and secondary harm.
- Reduce discomfort during insertion and withdrawal.
- Reduce accumulation of urine sediment.
- The 4833 series has been successfully passed the long-term balloon test, the balloon filled with 10cc sterile water performed no deflation or rupture after being immersed in the simulate urine for 90 days.
