### 4. Usage instruction

- It is used for medical staff to avoid being contaminated by blood, body fluids, and other infectious substances during contact.
- Isolation gown is a two-way isolation to prevent medical staff from being infected or contaminated as well as patients from being infected.
- When entering a strictly isolated ward, you need to wear isolation gowns.
- Examination and nursing require special isolation of patients. When the work clothes may be contaminated by secretions, excrement, blood or body fluids, isolation clothes shall be worn
- Medical staff entering the patient wards of infectious diseases that are likely to cause dissemination in the hospital and patients who require special isolation (such as extensive burns, organ transplants, and premature babies) are required to wear isolation gowns.
- Single use only.

### 5. Sterilization Non-Sterile
