**HELLO &
WELCOME**

● Production
▲ Sales

For nearly 30 years, following the philosophy of parent company Trigano Group, its trailer division has been dedicated to designing, manufacturing and selling trailers of the highest quality and great parameters.

With around 200,000 trailers sold each year, the Trigano Trailers Division has created and developed a network of professional dealers and retailers worldwide through good business relationships and mutual trust. In this product catalogue you will find the "Neptun" range of recreational and professional trailers. They are distributed throughout Europe by a network of professional dealers and retailers carefully selected according to our strategies. So you will always find a sales outlet close to you.

With 9 production sites in Europe, each with a complementary product range, and 1 wholesaler for accessories and parts, we are able to offer you a complete and comprehensive range of trailers and accessories. We are therefore convinced that we are the right partner for you and your requirements!

SMALL AND HANDY CITY TRAILER

- 1 Easy and practical storage**
The small dimensions of the CITY trailer allow it to be stored in small spaces. An additional advantage is the drawbar, which can be slid under the loading platform to further reduce storage space.
- 2 Always at hand**
Due to its small dimensions, the CITY trailer is ideal for residents of blocks of flats and also for owners of quad bikes, which can also pull a loaded trailer.
- 3 Easy tarpaulin installation**
The tarpaulin hooks are standard on NEPTUN trailers. They are used to attach both flat and high tarpaulins to the racks.

- 4 Safety and comfort**
The trailers feature KNOTT independent axle suspension with rubber elements to ensure safe and stable driving.
- 5 Easy load securing**
The load securing strap (rope) holders are located in the corners of the loading platform. The holders are fitted as standard on all NEPTUN trailers.
- 6 Light protection**
The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

PRACTICAL TRAILER FOR EVERYDAY NEEDS

1 Rigid and durable construction

High constructional rigidity and durability are provided by the cold-formed U-section frame side members and the two transverse beams. The N7-202 ptd and N7-202 pts trailers have additional profiles in the drawbar which, extending to the rear of the trailer, further reinforce the floor.

2 Safety and comfort

The sagittal drawbar with reinforcement and KNOTT independent axle suspension with rubber elements to ensure safe and stable driving.

3 Strong and functional sideboards

The sideboards are made of high-quality zinc-plated sheet metal. They are profiled for high rigidity, impact resistance and aesthetics. The hooks for securing the tarpaulin, both flat and high one (on a rack), are standard equipment on NEPTUN trailers.

4 Easy load securing

The load securing strap (rope) holders are located in the corners of the loading platform. The holders are attached to the sideboards and not to the floor. In this way, the entire floor area is available for use and the plywood has no additional weakening holes.

5 Light protection

The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

6 Easy unloading

Some PRATIK models have a manually tilting loading platform. This makes loading and unloading very easy.

RUSTIK

MODERN SEMI-PROFESSIONAL TRAILERS

1 Rigid and durable construction

High constructional strength is provided by the fully welded frame and drawbar with reinforcement, the cold-formed U-section frame side members and its transverse beams.

2 Two in one

The sideboards can be easily removed. This provides the user with a flat platform for transporting larger loads.

3 Safety and comfort

The trailers feature KNOTT (in non-braked models) and AL-KO (in braked models) independent axle suspension with rubber elements to ensure safe and stable driving. On spring trailers, the suspension function is performed by a (4 leaf) spring with shock absorber.

4 Strong and functional sideboards

The 400 mm profiled sideboards are made of high-quality zinc-plated sheet metal. They are profiled for high rigidity, impact resistance and aesthetics. The front board can be opened, allowing long loads to be transported.

5 Easy load securing

The load securing strap (rope) holders are located in the corners of the loading platform. The holders are attached to the floor and to the welded frame, which makes it possible to secure the load much better.

6 Light protection

The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

7 Easy unloading

All RUSTIK single-axle models have a tilting loading platform. This makes the load easy to remove from the vehicle.

PROFESSIONAL TRAILERS

1 Rigid and durable construction

High constructional strength is provided by the fully welded frame and drawbar, the cold-formed U-section frame side members and its transverse beams (two or three depending on the trailer model)

2 Two in one

The sideboards can be easily removed. This provides the user with a flat platform for transporting larger loads.

3 Safety and comfort

The trailers feature KNOTT (in non-braked models) and AL-KO (in braked models) independent axle suspension with rubber elements to ensure safe and stable driving. On spring trailers, the suspension function is performed by a (4 leaf) spring with shock absorber.

4 Strong and functional sideboards

The 450 mm profiled sideboards are made of high-quality zinc-plated sheet metal. They are profiled for high rigidity, impact resistance and aesthetics. The front board can be opened, allowing long loads to be transported.

5 Easy load securing

The load securing strap (rope) holders are located in the corners of the loading platform. The holders are attached to the floor and to the welded frame, which makes it possible to secure the load much better.

6 Light protection

The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

7 Easy unloading

All PRO single-axle models have a tilting loading platform. This makes the load easy to remove from the vehicle.

NORDICA

Pic. N13-263 2 kps

PROFESSIONAL TRAILERS WITH LARGE LOAD SPACE

1 Large load space thanks to openable and removable sideboards

The NORDICA series are trailers with wheels under the loading platform, so the load space is considerably larger than in trailers from other manufacturers. All boards can be opened or removed. NORDICA is the perfect solution for transporting pallets and other forklift-loaded cargo, and this on all four sides of the trailer - not just the rear.

2 Protection when loading with a forklift

NORDICA has a strong steel profile in the outer edge of the platform. This protects the floor when loading with a forklift.

3 Removable corner posts

All corner posts can be removed, making the trailer versatile and easy to adapt to different needs. When all the boards and posts are removed, you get a completely flat trailer for bulky loads.

4 Strong sideboards, strong locks

The sideboard panels are doubled in their upper half, making the sideboards more rigid and strong. In addition, Nordica is equipped with a double locking system at each corner. This is another feature of the trailer for professional and frequent use.

5 Stable driving, long load transport

NORDICA is easy to drive thanks to its unusually large loading platform and long drawbar and is clearly visible in the side mirrors. The long loading platform in combination with the openable (and removable - if necessary) front side enables even very long loads to be transported.

6 Easy load securing

NORDICA is fitted with flat and low holders for securing the load with straps. The floor (platform) is almost completely flat and loading with a forklift is safe as no part of the floor will be damaged.

7 Safety and comfort

The trailers feature KNOTT (in non-braked models) and AL-KO (in braked models) independent axle suspension with rubber elements to ensure safe and stable driving.

TRAILWOOD

Pic. N7-253 tw

VERSATILE PLYWOOD TRAILERS

1 Rigid and durable construction

High constructional strength is provided by the welded drawbar, the cold-formed U-section frame side members and its 3 or 5 transverse beams.

2 Safety and comfort

The sagittal drawbar with reinforcement and independent KNOTT axle suspension ensure safe and stable driving.

3 Standard equipment

TRAILWOOD is equipped as standard with rails on sideboards, a front overboard rack and a support wheel (in single-axle models).

4 Easy load securing

The load securing strap (rope) holders are located in the corners of the loading platform. The holders are attached to the floor and to the frame, which makes it possible to secure the load much better. The rails can also be used to secure the load.

5 Light protection

The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

6 Easy unloading

All TRAILWOOD models have a tilting loading platform. This makes the load easy to remove from the trailer.

BOIS

PI: N13-236 bois

PROFESSIONAL PLYWOOD TRAILERS FOR VARIOUS APPLICATIONS

- 1

Rigid and durable construction
High constructional strength is provided by the welded frame and drawbar, the cold-formed U-section frame side members and its three to five transverse beams.
- 2

Two in one
The sideboards can be easily removed. The user gets a flat platform for transporting larger loads.
- 3

Standard equipment
BOIS is equipped as standard with rails on sideboards, an overboard rack and a support wheel.
- 4

Easy load securing
The load securing strap (rope) holders are located in the corners of the loading platform. The holders are attached to the floor and to the frame, which makes it possible to secure the load much better. The rails can also be used to secure the load.
- 5

Light protection
The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.
- 6

Easy unloading
All BOIS models have a tilting loading platform. This makes the load easy to remove from the trailer (a gas spring can be fitted to hold the loading platform up).
- 7

Safety and comfort
The trailers use ALKO independent axle suspension with rubber elements to ensure safe and stable driving.

MULTIFUNCTION PLATFORM

1 Rigid and durable construction

High constructional strength is provided by the welded frame and drawbar, the cold-formed U-section frame side members and its three to five transverse beams.

2 Safety and comfort

The sagittal drawbar with reinforcement and KNOTT (in non-braked models) and AL-KO (in braked models) independent axle suspension with rubber elements to ensure safe and stable driving.

3 Ramps

The optionally purchased rear board can be used as a ramp. This is made of 3 mm thick hot-dip galvanised corrugated sheet metal.

4 Easy load securing

The trailers are fitted with holders which extend from the floor for securing the load with straps.

5 Light protection

The tail lights are positioned on the side supports to enable the trailer to be loaded directly, without the use of ramps, when the platform is tilted back. The cable connectors are protected in the best available way and ensure many years of maintenance-free operation.

6 Easy loading and unloading

The trailers have a tilting loading platform that allows unloading without unhooking the trailer. The fitting of a gas spring stabilises the tilting of the floor during loading and unloading.

7 Optional accessories are also available for the trailers:

- strong and durable longitudinal sideboards, 20 cm high, made of 1.5 mm thick hot-dip galvanised sheet metal,
- ramp, which is also the rear board, made of 3 mm thick hot-dip galvanised corrugated sheet metal,
- mesh sideboards, 80 cm high, which can be attached to either the platform or the solid sideboards,
- winch mounted at the front of the trailer for pulling heavy loads,
- screw jack for the tilting platform.

TRAILER FOR TRANSPORTING MACHINES, QUAD BIKES OR SNOWMOBILES

- Large loading area.
- High construction strength is provided by the fully welded frame, cold-formed frame side members and transverse beams as well as the strong welded sigittal drawbar. All components hot-dip galvanised.
- The chassis (in N7-380 m18r and N7-350 CT models) has a KNOTT axle and leaf springs and shock absorber to ensure a safe and stable driving.
- AL-KO independent axle suspension ensures safe and stable driving (in models with brakes).
- The loading platform is tiltable and fitted with a gas spring (in the N7-350 CT model) and a screw jack in other models.
- The rear board is also a ramp.
- The sideboards are made of high-quality galvanised sheet metal. They are profiled for high rigidity, impact resistance and aesthetics.
- The front and rear boards are openable.
- The sideboards can easily be removed. The user gets a flat platform for transporting larger loads.
- The load strap (rope) holders are located in the corners and in the middle of the loading platform. The holders are attached to the floor and to the welded frame, which makes it possible to secure the load much better.
- The multifunctional lights are mounted inside the rear beam. This protects them from damage, moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.
- Standard trailer equipment includes:
 - In 380 m18 models - a manoeuvring wheel with clamp, two clamps at the rear of the trailer, a screw jack, in addition, in models with brake - wheel chocks
 - In the N7-350 CT model - a manoeuvring wheel with clamp, gas spring and winch.
 - Additional optional accessories are available for the trailers listed in the table.

Pic N.-380 m18

N.-380 M18 VER. A TRAILER FOR TRANSPORTING MACHINES, QUAD BIKES OR SNOWMOBILES

- Large loading area of 3800 x 1800 mm.
- The trailer loading platform is tiltable and fitted with a powerful 700 kg screw jack.
- The trailer is fitted with a 15 mm thick non-slip plywood floor.
- The rear board is also a ramp.
- The 250 mm sideboards are made of high-quality galvanised sheet metal. They are profiled for high rigidity, impact resistance and aesthetics. The front and rear boards are openable. The sideboards can be easily removed. The user gets a flat platform for transporting larger loads.
- Load securing strap (rope) holders are located in the corners (4 pieces) and in the middle of the loading platform (8 pieces). The holders are attached to the floor and welded frame, which makes it possible to secure the load much better.
- High construction strength is provided by a fully welded frame, cold-formed frame side members and 4 transverse beams as well as a strong welded sagittal drawbar. All components are hot-dip galvanised.
- The multifunctional lights are mounted inside the rear beam. This protects them from damage, moisture and mud. The

cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

- The trailer is ideally suited for transporting machines, quad bikes or snowmobiles.
- In braked models a safe and stable driving is ensured by AL-KO independent axle suspension. In the non-braked N7-380 m18r version A trailer, leaf springs and shock absorbers perform this function.
- The standard equipment of the trailers includes a manoeuvring wheel with clamp, two clamps at the rear of the trailer, a screw jack, wheel chocks (in models with brakes).
- For trailers there are additional optional accessories available listed in the table.

TRAILER FOR TRANSPORTING MOTORBIKES

- 1

Safety and comfort
KNOTT (in non-braked models) and AL-KO (on braked models) independent axle suspension to ensure safe and stable driving.
- 2

Easy load securing
The trailer has tie-down strap holders to secure the motorbike during transport and adjustable locks to secure the front wheels of the vehicle.
- 3

Light protection
The position lights have been integrated into the front beam or are on brackets and the rear multifunction lights are in a steel housing so that they are all protected from mechanical damage.
- 4

Transporting motorbikes
PM2 and PM3 trailers are fitted as standard with two or three rails with U-bolts for securing the front wheels of motorbikes and one overrun chute. Other models with plywood floor have 2 motorbike racks and a ramp as standard.
- 5

Protection against dirt
Integrated mudguards protect the transported motorbikes from dirt.
- 6

Easy loading and unloading
The trailers have a tilting loading platform that allows unloading without unhooking the trailer. In models with a plywood floor a standard screw jack assists with loading. In other models a gas spring can be used as an additional option to stabilise the tilting of the floor during loading and unloading.

N7-17 AND N7-12 NON-BRAKED TRAILERS WITH ADJUSTABLE LENGHT FOR TRANSPORTATION BOATS, JET SKIS AND CANOES

1 For boats from 8 to 17 feet in length

NAVY trailers have a special design so that the length of the trailer can be adjusted to suit boats between 8 and 17 feet. The N7-17 kj model has a special design for transporting canoes having eight transport positions with a length of 2400-5000 mm, a width of 715-800 mm and a height of up to 445 mm. The N7-12 js model has a special design on supports (fabric-coated with dimensions of 2000 mm x 130 mm) for transporting a jet ski or boat.

2 Easy boat loading and unloading

The N7-17 NAVY rear horizontal rollers of the are located on the cradle, this allows the boat to be smoothly slid off the trailer or pulled onto the trailer. The pressure of the boat on the cradle is reduced, the risk of damage to the boat is negligible.

3 Optimal weight distribution

The positions of the N7-17 NAVY side supports and the cradle are fully adjustable. This ensures optimum pressure on the rollers, made of non-marking plastic, against the sides and keel. The addition - at the customer's request - of one side support per side increases the reliability of the boat transport.

4 Long service life

NAVY trailers are made from high-quality steel and are bath-galvanised. This ensures that the trailer will last for many years. Fitted with KNOTT independent watertight axle suspension to ensure safe and stable driving.

5 Easy and quick rear beam operation

The rear light bar can be removed quickly and easily.

6 Standard equipment

Trailers are equipped with a support wheel as standard, while individual versions have:

- navy and jet ski - 450 kg winch and winch support,
- navy - 3 horizontal rollers, 2 adjustable side supports,
- jet ski - 2 side skids (fabric-coated) with supports, horizontal roller,
- kj - design for transporting canoes.

N13-20 NAVY TRAILER WITH BRAKE AND ADJUSTABLE LENGTH FOR TRANSPORT

- The trailer has a special design so that the length of the trailer can be adjusted to suit boats between 455 and 610 cm (15 and 20 feet).
- The trailer is available in registration versions with a GVW of 1000 kg, 1200 kg, 1300 kg, 1350 kg.
- The rear horizontal rollers are located on the cradle - this allows the boat to be smoothly slid off the trailer or pulled onto the trailer.
- The positions of the side supports and cradle are fully adjustable. This ensures optimum pressure on the rubber rollers against the sides and keel.
- Additional load securing holders welded on the rear and front beams.
- Axle position can be adjusted.
- Made of high-quality hot-dip galvanised steel. This ensures a long service life for the trailer.
- AL-KO independent watertight axle suspension ensures safe and stable driving.
- The rear light bar can be easily and quickly removed.
- Fitted with a 1100 kg winch, winch support, horizontal rollers on the cradle, 3 horizontal rollers and 4 adjustable side supports.
- The multifunction lights are housed in the light panel so they are protected from moisture and dirt.
- For the N13-20 NAVY trailer there are additional optional accessories listed in the table.

LAWETA

TRAILER FOR TRANSPORTING CARS AND MACHINES

1 Rigid and durable construction

High construction strength is provided by the fully welded frame and hot-dip galvanised drawbar.

2 Ramps

The trailer N27-420 2 ATB is equipped with two ramps (1990x320 mm) made of perforated embossed sheet metal to facilitate the entry and exit of the vehicle from the platform. The ramps are hidden in special pockets under the platform and are additionally protected against vibration and protruding.

3 Transport

Vehicles in ATB models are transported on transport rails made of perforated embossed sheet metal.

4 Easy loading and unloading

The special design of the ATB load platform and the ramps allow loading and unloading without unhooking the trailer.

5 Safety and comfort

The trailers use AL-KO independent axle suspension to ensure safe and stable driving.

6 Light protection

The multifunctional lights are mounted inside the rear beam. This protects them from damage, moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation. The lighting of the N27-420 2 ATB trailers is based on LED lamps.

7 Standard equipment

The standard equipment of the trailers includes, among other things, wheel chocks and a manoeuvring wheel with clamp, in addition the ATB model has two ramps and a 1100 kg winch.

8 Additional accessories

For trailers there are additional optional accessories available listed in the table.

KIPPER

Pic: N27-256 2 kiper

STURDY DOUBLE-AXLE TIPPER TILTABLE BACKWARDS

1 Large load space thanks to openable and removable sideboards

Trailers with wheels under the loading platform. This makes the load space considerably larger than in trailers from other manufacturers. All boards can be opened or removed. They are the perfect solution for transporting materials loaded with a forklift and on all four sides of the trailer - not just the rear. The removable sideboards make work much easier and the smooth sheet metal floor makes it easier to slide the goods when tilting.

2 Removable corner posts

All corner posts can be removed, making the trailer versatile and easy to adapt to different needs. When all the boards and posts are removed, you get a completely flat trailer for bulky loads.

3 Strong sideboards, strong locks

The trailer is fitted with a double locking system at each corner. This is another feature of the trailer for professional and frequent use.

4 Welded frame and chassis

Welded frame and chassis and strong sagittal drawbar all hot-dip galvanised.

5 Hydraulic jack

The hydraulic jack has a large range of movement. The trailer is equipped with a hydraulic system with 2 pumps: a manually driven piston pump and a gear pump driven by e.g. a cordless screwdriver (not supplied with the trailer). This allows you to unload even heavy loads efficiently and effortlessly on your own.

6 Easy load securing

The trailer is fitted with holders which extend from the floor for securing the load. The steel floor (platform) is therefore completely flat and loading is safe as no part of the floor will be damaged.

7 Light protection

The multifunction lights are mounted inside the rear beam and under the rear board so that they are protected from damage and from moisture and mud. The cable connectors are protected in the best possible way and ensure many years of maintenance-free operation.

8 Safety and comfort

The trailers feature AL-KO independent axle suspension to ensure a safe and stable driving. The trailer equipment as standard includes a fi 60 sturdy automatically folding manoeuvring wheels and wheel chocks. For trailers there are additional optional accessories available listed in the table.
