

The Pediatric Combination
that lasts

Now with
PROPATEN
Bioactive Surface
for
**Pediatric
Shunt**

PERFORMANCE through experience

PROPATEN®

VASCULAR GRAFT

A New Category *in Pediatric Shunts*

- ▶ Gore builds on proven elements you can trust — a combination of innovation and a history of clinical success.
- ▶ **More than 50,000** successful GORE® PROPATEN® Vascular Graft implants and more than three decades of experience with GORE-TEX® Vascular Graft configured for Pediatric Shunts worldwide.
- ▶ **More than 200** scientific papers including numerous clinical studies have demonstrated the performance of the end-point covalent heparin bonding technology.
- ▶ **More than 25 million** Gore clinical ePTFE implants worldwide.
- ▶ **More than 30 years** of experience in medical device implants.

PROPRIETARY END-POINT COVALENT BONDING

- Only the end of the heparin molecule is bonded to the graft surface

The heparin bioactive site remains free to interact with the blood

- Heparin molecules are bonded to the graft's luminal surface
- Bioactive site of the heparin molecule binds to antithrombin (AT)

- Antithrombin binds to thrombin (T) – a neutral AT-T complex is formed
- Thrombin loses its ability to catalyze the conversion of fibrinogen to fibrin

- Neutral AT-T complex detaches from the heparin molecule
- Heparin bioactive site becomes available to again bind antithrombin

- End-point covalent bonding keeps heparin anchored to the graft surface over time
- Proprietary Gore technology

HEPARIN

- A proven anticoagulant
- Derived from heparin sourced in North America
- Reduced molecular weight heparin of porcine origin

ePTFE

- Unchanged GORE-TEX® Vascular Graft handling properties

Stretch Technology

Thin-walled

Longitudinal extensibility – allowing easier tailoring and sizing

Kink resistance – improved handling, soft and supple while enhancing kink resistance

Examples of Applications in Pediatric Cardiac Surgery:

- Complex Tetralogy of Fallot¹⁻⁴
- Pulmonary atresia with VSD²⁻⁴
- Pulmonary atresia with intact septum²⁻⁴
- Double outlet right ventricle with pulmonary stenosis^{2,4}
- Complete transposition with pulmonary stenosis²⁻⁴
- HLHS and other single ventricle equivalents^{2,4,5}
