Scurgerile de refrigerant contribuie la schimbarile climatice. Refrigerantii cu nivel mai scazut al potentialului de incalzire globala (GWP) contribuie intr-o masura mai mica la incalzirea globala la scurgerile in atmosfera. Aceat echipament contine refrigerant cu GWP egal cu [675]. Adica 1 kg de refrigerant emis in atmosfera este echivalent de [675] ori mai mare decat 1 kg de CO2, calculat pentru o perioada de 100 de ani. Interventia asupra circuitului frigorific este permisa doar personalului specializat.

Contine refrigerant cu efect de sera

(1)(2) consum de energie "xyz" kWh pe an, pe baza testelor standard. Consumul efectiv de energie depinde de modul de utilizare a echipa mentului si unde este instalat.

Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to [675]. This means that if 1kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be [675] times higher than 1kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional

Contains fluorinated greenhouse gases.
