

FINGERPRINT POWDERS

Fingerprint powders are essential forensic materials used to visualize latent fingerprints on various surfaces. They provide high contrast and clear print development on glass, metal, plastic, painted, and other non-porous surfaces. Available in different colors and particle formulations, these powders are suitable for both field investigations and laboratory applications.

Colors: Available in different colors including dual use powders.

Packing: Powders will be packed in plastic containers up to 1000ml.
