Urine sediment counting chamber

REF: RJ818-U

URINE SEDIMENT QUANTITATIVE COUNTING CHAMBER SLIDE

Routine urinalysis includes both chemical contents detecting and urinary sediment (formed elements) microscopic examination. Uric-SCP urinary sediment quantitative analyzer is the basic instrument of the standardization detecting of urinary sediment, which will provide the detection of urinary sediment with accuracy, consistent, and safety. It can be easy to operate, and effectively to prevent the contamination with urine specimen for the operator.

Urine Cell counting board	
Principle	Designed by gas expansion principle
Panel area	63 mm2
Disk depth	0.1mm
Quantitative design	6.3 ul
Features	Rapid expansion, high transparency, diversion design, no residual urine, avoid staining microscope

Operation method:

- 1. Pour urine into the catheter
- 2. Pour out the supernatant after centrifugation
- 3. Use a straw to suck out the remaining residue and drip it into the calculation disk
