<b>GMND Kodu</b>	47631- Quarternier (quaternary) ammonium compound device disinfectant/cleaner
<b>GMDN Açıklaması</b>	Liquid substance that contains chemical cleaners and quaternary ammonium compounds as primary disinfection agent, used to clean and disinfect medical devices (eg, surgical or dental instruments). To achieve disinfection, the medical device is typically immersed in the agent for a specified period of time or the agent is applied manually to the medical device. This device cannot be reutilized after application.
<b>GMND Kodu</b>	58077- Medical device cleaning / disinfection wiping
<b>GMDN Açıklaması</b>	Pre-treated fabric designed to clean and disinfect the surfaces of medical devices and instruments by wiping for individual patient use. This fabric is impregnated with a solution of detergent(s) and antimicrobial agent(s), and is designed to reduce the amount of soiling and microbial contamination on the surfaces of medical devices and instruments; This product is not designed to be the main form of instrument cleaning and disinfection. It is a disposable device.
