Acting for infection control, thanks to:

- **4 brands ensuring high-quality medical devices in their respective field**
- **A personalized support of our customers**
- **A strict quality process**

A FRENCH COMPANY

Since 1967, Didactic puts infection control at the core of the care. Through the conception, manufacturing and the commercialization of 4 brands of medical devices and health products, Didactic protects and make healthcare staff life easier for the wellbeing of the patients.

A French company, the company is situated next to Le Havre (Normandy) where the headquarters, storage site, and the sterilization unit by ethylene oxide are located. A manufacturing site is also present in the Auvergne-Rhône-Alpes region.

Today, with its 4 brands and more than 850 references, **Didactic offers its expertise to more than 3 500 customers worldwide.**

Protection and gloves

Hygiene of dependent patient

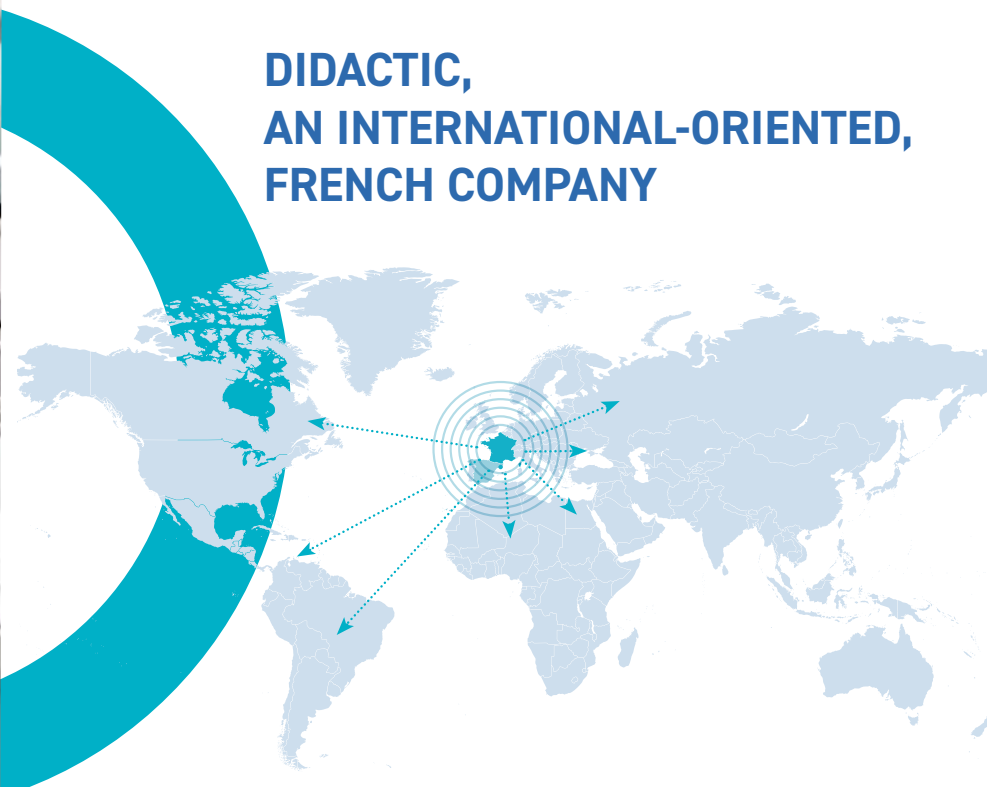

Oral Care

Infusion, injection, oncology, urology, patient healthcare and environment

DIDACTIC, AN INTERNATIONAL-ORIENTED, FRENCH COMPANY

- Headquarters in France
- Subsidiary in Spain (Barcelona)
- More than 40 countries worldwide trust our products and services

MASTERED PRODUCTION

Didactic products are designed and developed to answer the needs of healthcare professionals.

- A certified sterilization unit at Etainhus, France: 650 pallets/month.
- A pharmaceutical cleanroom class ISO 7 of 100 sq.m in France.
- Oversight of global industrial subcontracting.

YOUR ORDER

Didactic is at your side for a fluid management of your order, from their arrival to their delivery:

A customer service attentive to your needs.

- Commercial assistants dedicated to track orders,
- Paperless orders and invoices (hospitalis).

A 10,000 sq.m. platform and 11,000 pallet spaces: One of the biggest European semi-automated storage.

- Delivery in France: D to D+4,
- Full traceability by EAN 128 norm GS1-UDI,
- Customized order service.

Guaranteed supply.

- Specific breakdown management,
- Safety stock of 30 to 60 days,
- Proposal of substitute products.

- Medical Devices are CE-marked under the Medical Device Regulation (MDR),
- Conformity of the company entire processes to ISO 13485 and EU regulation,
- Certified audit performed by our Notified body.

HAND PROTECTION SPECIALIST

Protection is mandatory for prevention: with Polysem. medical range, Didactic commits to prevent the infectious risk through the protection.

French leader in gloves market thanks to its expertise, today Polysem.medical is part of the product ranges chosen by healthcare professionals to ensure their protection as well as the patient's protection.

High protection for the patient and the healthcare professional as Medical Device and PPE

Elasticity and tactile sensitivity for precise cares

SENSITIVITY AND ELASTICITY

The variability of thickness and lengths of the gloves influences the sensitivity and the level of protection.

No DEHP or Phtalates (CMR 1 & 2)

Infiniteed infusion and transfusion medical devices comply with the European regulation concerning substances of very high concern and do not contain CMR 1 or 2 substances above the legal minimum of 0.1% mass/mass.

The plasticizers replacing the DEHP are either the DINCH or the TOTM.

5.5 « GRAVITY » INFINEED RANGE

Didactic innovates and anticipates regulatory changes with the **new range of 5.5 "Gravity" infusion sets without DEHP and without BPA (<0.1% mass/mass)**.

This new range was developed with the aim of **reducing environmental impact**:

- reducing the mass of plastics used by about 10%;
- consequently reducing the mass of potentially infectious medical waste,
- eliminating the use of endocrine disruptors.

BISPHENOL A is thought to have detrimental effects on the body as an endocrine disruptor. In late 2016, the European Community classified it as a candidate substance for inclusion in REACH Annex XIV due to its reprotoxic properties (CMR substance).

In 2017, the European Chemical Agency (ECHA) supported the French proposal of considering Bisphenol A an SVHC (Substance of Very High Concern) due to its action as an "endocrine disruptor for human health" and the State Committee Members of ECHA included it on the list of candidate substances of very high concern for authorisation, also based on its properties as an "endocrine disruptor for the environment".

The populations with the highest exposure are the same as those for other endocrine disruptors: children under 3 years of age, pregnant women, chronic patients (haemodialysis)..

The *"Preliminary Opinion on the safety of the use of bisphenol A in medical devices"* is available on request

THE «INFINEED 5.5» INFUSION DEVICE

SECURE CONNECTIONS

The tapered trocar with a stopper increases the security of the connection with the solute container.

Note: Remember to push the bag firmly up to the stop.

READY FOR USE

Delivered with a closed air intake and open roller clamp, the linear flow regulator is placed near the dropper chamber for immediate use on bags or vials.

Didactic Innovation and Exclusivity: BPA-free infusion devices

In association with Eastmann Chemical Company, an international company specialising in the supply of innovative raw materials, Infineed **developed a complete BPA-free infusion range by replacing the polycarbonate in the body of 3-way stopcocks with a new generation copolyester**.

This polymer also provides stability and chemical resistance, in particular to lipids and post-sterilisation stability to meet infusion requirements.

The BPA-free infusion range is easily distinguished by the specific green colour of the stopcock.

- Find all our BPA-free items in our catalogue, which have a green BPA-free mark!

SECURE DRAIN

The hydrophobic drain filter located on the cap makes it possible to perform automatic sterile drainage without needing to remove it. It has one of the best mechanical resistance ratings on the market (Europharmat-2018).

EASY HANDLING

The Luer Lock connector is mobile to facilitate handling and prevent twisting of the tubing. Except on the PER1FFL25 infusion device, which has a fixed Luer lock.

COMFORTABLE USE

The dropper chamber is flexible and translucent and facilitates the initiation of use and the start of treatment.

SPECIFIC INFUSION SET

With air intake, mobile luer lock

Reference		BPA free	Site Y	Box Sachet	Carton
PER1FLFP	1 way with graduated rotary flow controller (5.5 « Gravity » series)	●		100	4 x 100
PER3PFPS	3 ways without graduated rotary flow controller			75	4 x 75

The main advantage of the rotary flow controller is, when it's properly set (drop count at the drop count chamber), the stability of the infusion rate being more precise than the wheel regulators' by simple crushing of the tube. Besides, the handling of the flow controller being so simple, it makes its use attractive.

However, the practice audits reminds us that 90% of operators observe differences between real and theoretical flow, when using graduated flow controllers. Thus, the height, the viscosity of the fluid infused, can, among other things, influence the flow.

So, we should use the same flow adjustment rules as with classical infusors (drop count at the drop count chamber), flow controllers without graduation encourage the respect of good practices of infusor adjustment by gravity.

They must not be used with some pharmaceutical specialities. Consult the technical file.

VALVES

Infeed two way valves are medical infusion devices enabling the injection and the collection in a needle-free closed system. They ensure a direct access to the veinous route and automatically closes off by a silicone septum, when removing the device.

For you, Didactic anticipates by the diversity and innovation of products and services

In collaboration with the caregivers (workshops, committees, platforms), Didactic develops new ranges of products respecting security and ergonomics criteria.

Ecodesign is taken into account in the choice of raw materials, packaging and wrapping items, and methods of disposal.

Didactic takes part in the workshops of SNITEM (French Syndicate of Medical Technology Industries), in order to provide you with technological developments applied to medical devices (PVC Dinch, BPA-free perfusion range, ethylene oxide residues, secured devices linked to GERES).

INFINEED INNOVATES WITH A STREAMLINED AND SECURE OFFER

From the preparation to the administration of anti-cancer treatment, Infineed Oncology offer provides a set of devices usable in a closed containment.

Our reconstitution and administration devices offer innovative solutions to the careteams and a streamlined offer to the staff and the buyers :

- Less time for preparation and administration,
- Less risks of nosocomial infections,
- More protection for the caregiver by reducing manipulations,
- More security by manipulation in a closed containment,
- Optimized management by a thorough methodology of preparation.

All medical devices used for Oncology are DEHP free and CMR1 or 2 phthalate free (<0.1% m/m)

URINARY DRAINAGE SYSTEM SHORT TERM.....	31
URINE BAGS SPECIAL FOR CLOSED SYSTEM.....	32
URINARY DRAINAGE SYSTEM LONG TERM	32
ACCESSORIES	33
COLLECTION DEVICES	33

INFINEED PROPOSES A COMPLETE RANGE OF URINE BAGS FROM THE SIMPLEST TO THE MOST ELABORATED VERSION.

Infineed is part of the Good Use in all its set of measures in health establishments. Our regional managers advise you on the most suitable choice for your establishment.

DEMANDING PRODUCTS

The Infineed urine bags answer all the requirements for hygiene and asepsis regulating care practice.

AN ESSENTIAL PROTECTION FOR THE PATIENT

Concerning the urinary hospital-acquired infections, it is recommended to use the devices respecting the urinary catheterization in a closed system (assembly of the probe and the collection system prior to the catheterization, the two devices never being disconnected thereafter).

The "Mid and Long Term" Infineed urine bags, assembled in a closed system by the caregiver, allow to answer the good practices in use and to participate in the control of the infectious risks during a home catheterization.

A specific documentation on the closed system and the Didactic range is available on simple request by telephone at **+33 2 35 44 93 93**.

SPECIAL URINE BAGS FOR CLOSED SYSTEMS

They ensure the bladder drainage and allow to take samples without deconnection

The urine bags for closed systems must have:

- An extract system without a needle associated,
- A single-handed drainage system

READABILITY

Simple visual indications to facilitate the good use of the product.

MONITORING

Volume rating scale for a permanent control of the diuresis.

ERGONOMICS

The cross stopcock system is easy to handle and makes easier the bag drainage.

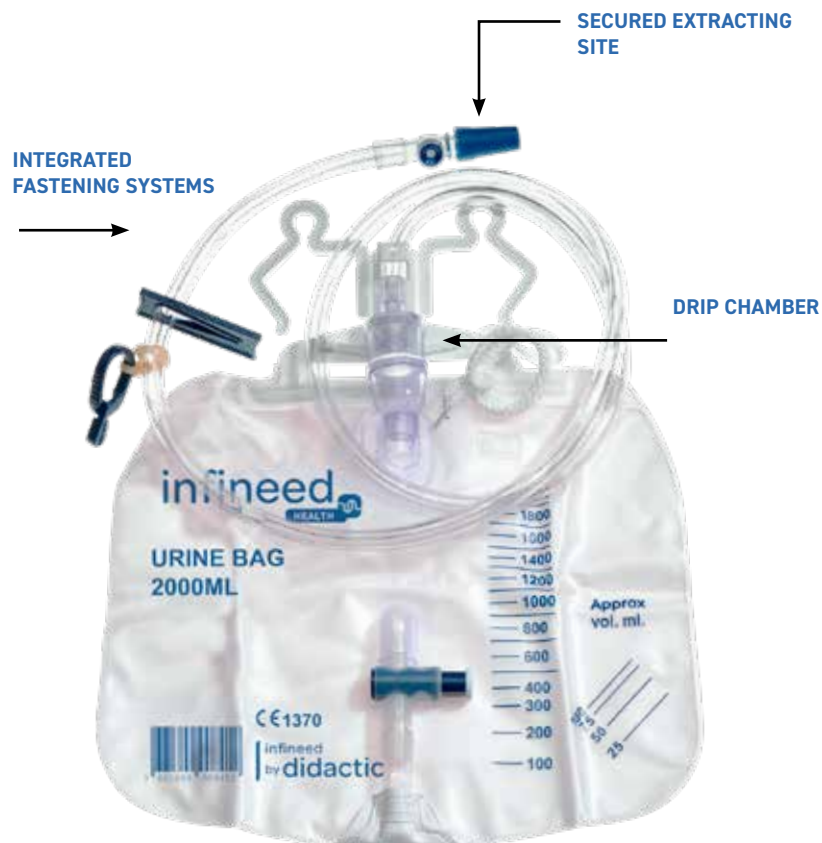

ANTI-REFLUX VALVE TO AVOID RENAL COMPLICATIONS

SECURED EXTRACTING SITE

INTEGRATED FASTENING SYSTEMS

DRIP CHAMBER

MEDIUM TERM URINE BAGS

Indicated for bladder drainage of medium period (0 to 96 hours, up to 7 days according to the facility protocol)

Packaging
Carton: 50

LONG TERM URINE BAGS

Indicated for bladder drainage of long period (from 7 to 15 days, period defined by the change of catheter), in need of urine observation or test.

- Prevents urinary infections thanks to drip chamber and anti-backflow valve.
- Reduces urinary incontinence.

Those 4-liter urine bag are particularly adapted to bladder washing post TURP (transurethral resection of the prostate).

INFINEED PROPOSES A RANGE OF HAZARDOUS WASTE SECURED MANIFOLDS

SAFETY
RANGE

WASTE CONTAINERS

The Infineed manifold is composed of a plastic body and a red coloured lid. They must be assembled in situ. Infineed takes part in securing care and provides you with manifolds answering the current standards.

According to the decree of June 27th 2016 modifying the decree of November 24th 2003 related to care waste packaging with infectious risks and anatomical parts from human origin.

- Norms:
NFX30-500 et NFX30-511 (French Standard)
EN ISO 23907 (International Standard)
BS 7320 (British Standard).
- ADR hazardous materials transport.
The boxes and mini-manifolds for sharp waste are concerned by the article 6 of the current decree.

MOUTH CARE RANGE

ORAL CARE, ESSENTIAL IN THE CARE PATHWAY

The absence of care for the oral cavity leads to:

INCREASE THE RISK OF INFECTIONS

- Plaque
 - ➔ potential host for respiratory pathogens
(*S. aureus*, *P. aeruginosa*, *H. parainfluenzae*)¹

REDUCE THE WELL-BEING OF THE PATIENTS

- Difficulty in eating (pain, irritation, bleeding).
- Reduced social interaction, feeling of shame.

For 20 years, Inter.med has been working for the prevention of the infectious risk related to oral care with a large range of medical devices.

¹: Dr. C.Badet, "Sphère bucco-dentaire : Quel est le risque infectieux ?", CPIAS Nouvelle Aquitaine, 2016, URL on the 06.11.2020 : https://www.cpias-nouvelle-aquitaine.fr/wp-content/uploads/2015/12/ARCA_2016_Badet.pdf

A simple gesture for a complete oral care

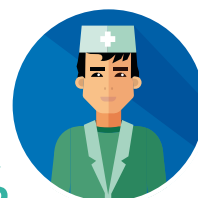

Inter.med oral care swabs have been developed for all types of patients. High quality, they are made of a chemical-free foam, assembled on a stick by a strong gluing for optimal patient safety.

Inter.med solutions:

- Contribute to the prevention of infectious risks related to oral care
- Improve patient well-being
- Facilitate care for the caregiver

Ref HYD300
Packaging
per carton of 300

ROUND CUPULA

Transparent and graduated
60 ml
Ref CUP060
Packaging
per carton of 100

Inter.med Laboratories
are part of the prevention
of infections in ICU

VAPs our main priorities

According to surveys, Ventilator Associated Pneumonia (VAP) affects between 20 and 50% of adult patients and between 5 to 10 % of child patients, hospitalized in Intensive Care Units on mechanical ventilation.

VAPs contribute to a rise of hospitalization costs, length of stay and antibiotics consumption. Their prevalence increases with:

- The Patient's age,
- The duration of the mechanical ventilation,
- The patient's position,
- The presence of GERD or not,
- The mouth cavity hygien.

Numerous studies show the efficiency of oral hygien against VAPs. Check out our technico-scientific file concerning the incidence of mouth care on those infections (available at your regional manager).

It is with that aim that Inter.med Laboratories have developed a full range of "ready for use" oral care sachets, packed in distributive boxes adapted to the organizations and specificities of the Intensive Care Units or palliative care departments.

Hygiene for the control of infectious risk for the dependent patient

The World Health Organization declares that «health care-associated infections[...] are the most frequent adverse event in health-care delivery worldwide.» 7 on 100 patients in developed and 10 on 100 in developing countries acquire at least one health care-associated infection (HCAI) on any given day¹.

Since November 2019, Didactic is partner of Dr.helewa, company founded by Dr Laurent Helewa, who developed the first bedpan liner with his father, in order to offer innovating solutions for the prevention of infectious risk linked to *excreta*.

The products Dr.helewa were designed to:

- Fight against healthcare-associated infections related to the *excreta* management
- Improve the work environment for healthcare professionals
- Preserve patient's dignity and well-being

EXCRETA MANAGEMENT

**PENDING PATENT
ALVEOL TECHNOLOGY**

As a solution for excreta management, Dr.helewa liners :

- Absorb up to 600 ml of urine (0.9% saline solution)
- Hypoallergenic
- Easy to use

BEDPAN LINER

Ref. B60020

Suitable for standard bedpan,
for bedridden patients.

- Geriatrics • Palliative care • Orthopedics
- Emergencies • Maternity

Dimensions: 60 x 40 cm

Box of 20 liners (roll)

COMMODE LINER

Ref. C60020

Suitable for standard commode pails.

- Homecare • Nursing homes

Dimensions: 52 x 40 cm

Box of 20 liners (roll)

TOILET BOWL LINER

Ref. W60020

The Toilet Bowl Liner avoids throwing toxic substances
into the wastewater system. It is also suitable for
bariatric bedpans and commode pails.

- Oncology • Epidemic

Dimensions: 65 x 40 cm

Box of 20 liners (roll)

The Vomit Bag and the Male Urinal offer a "protected hands" solution: flaps allow a better grip and protect hands from projections.

VOMIT BAG

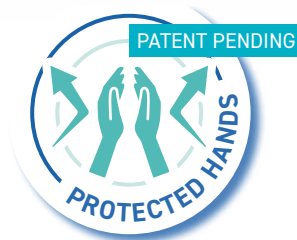

Ref. V60020

The Vomit Bag secures the collection of vomiting. Flaps protect the user's hands.

- Oncology • Emergencies • Palliative care
- Medical transport

Dimensions: 25 x 25 cm

Box of 20 liners (roll)

MALE URINAL

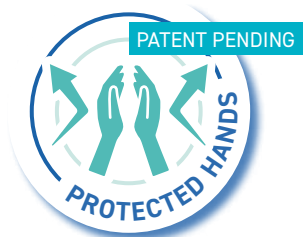

Ref. U60020

The Male Urinal allows the user to urinate discreetly. Flaps protect the user's hand.

- Geriatrics • Palliative care • Orthopedics • Emergencies
- Medical transport

Dimensions: 20 x 40 cm

Box of 20 liners (roll)

BAGS HOLDER

Dr.helewa offers bags holders developed for the prevention of infectious risk and to make your worklife easier.

URINAL BAG HOLDER

Ref. URIHOLDER

Male/female holder, one-patient use. Can be hanged to the bed rails. Must be disinfected between each use.

VOMIT BAG HOLDER

Ref. VOMHOLDER

One-patient use holder. Can be hanged to the bed rails. Must be disinfected between each use.

IC+ BEDPAN

Ref. BPIC

Ref. lid: BPCOVIC

Bedpan with silver ions integrated (Sanitized technology) or an antibacterial action and a reduced risk of HAIs. Lid in option.

BEDPAN

Ref. BPSTD

Ref. lid: BPCOVSTD

FOR YOUR DIFFERENT ABSORPTION NEEDS

SUPER-ABSORBANT POWER POUCH

Gelifies up to 500 ml of biological fluid,
allows to secure handlings.

Ref. SAP50050

**50 pouches of 10 g each
in an insulating and resealable bag.**

SUPER ABSORBANT PAD

To increase the absorption power of Dr.helewa bags and liners,
or to absorb liquids on the floor.

Ref. P60025

Box of 25 pads

BODY BATHING

PRE-MOISTENED & NO-RINSE GLOVE, READY TO USE

Pre-moistened gloves Dr. Helewa allow a body cleaning for dependent and bedridden patients:

- **Fast and without the usual accessories (basin, dry glove.)**
- **Soft thanks to viscose content and its lotion enriched with Aloe Vera**
- **Designed for patient comfort: gloves can be warmed in the microwave, and they are embossed for a more efficient bathing.**

WASH GLOVES: Body

With internal protective film for more protection.

Ref. ICBATH12

Pack of 12 gloves

WASH GLOVES: Shampoo

With internal protective film for more protection.

Ref. ICSHAMP12

Pack of 12 gloves

WASH GLOVES: Body

Ref. HCBG12

Pack of 12 gloves

Available in 2-glove version fragrance-free
Ref. NPBG2

MEDICAL BEDDING

NewBedding®

MULTI DETACHABLE AND DISPOSABLE FITTED SHEETS

New Bedding® multi detachable and disposable fitted sheets facilitate and decreases considerably the time of changing of dependent patients' fitted sheets and of several manipulations, which are potentially painful or uncomfortable to them.

Its double side Ultra-soft (bamboo fiber) and absorbent on one side and waterproof on the other allow to reduce the infectious risks while respecting the comfort of the patients.

NewBedding®
