Medical Device(s): **AGILON® Shoulder System**

Intended Use: The modular AGILON® Shoulder System is intended for hemi or total shoulder replacement. The system consists of different functional components designed to reconstruct the glenohumeral joint. Depending on indication, the humeral component may be used in conjunction with a glenoid component for conventional total shoulder replacement or to articulate directly with the natural glenoid in a hemi-shoulder application. The AGILON® Shoulder System is also intended for reverse shoulder replacement.

AGILON® MI is a stemless version of the AGILON® shoulder system. The metaphyseal implant is intended for cementless fixation to replace a shoulder joint in case of hemi or total anatomic shoulder replacement.

The AGILON® Cap and AGILON® CTA Cap are caps intended to replace the humeral head by articulation with the glenoid component or the natural glenoid. The AGILON® CTA Cap has an enlarged articulation surface which allows articulation with the acromion in case of a rotator cuff deficiency.

The AGILON® Cap Inverse and AGILON® Retentive Cap Inverse are caps intended to replace the humeral head by articulation with a glenosphere for a reverse shoulder replacement.

The AGILON® Glenoid Cementless Round and AGILON® Glenoid Baseplate Round are glenoid components intended for cementless fixation to replace the natural glenoid by combination with a glenosphere for a reverse shoulder replacement.

The AGILON® Glenoid Cementless Anatomical and AGILON® Glenoid Baseplate Cementless Anatomical are glenoid components intended for cementless fixation to replace the natural glenoid by combination with a glenoid PE-insert or a glenosphere for total shoulder replacement (anatomical or reverse).

The AGILON® Glenoid PE-Insert is intended to replace the surface of the natural glenoid in total anatomic shoulder replacement.

The AGILON® PE-Glenosphere and Glenosphere are components intended to replace the natural glenoid by combination with the AGILON® Glenoid Cementless Round or AGILON® Glenoid Baseplate Round for a reverse total shoulder replacement.

The AGILON® PE-Glenoid Cemented and Glenoid Cemented are glenoid components intended for cemented fixation to replace the glenoid surface in case of an anatomical total shoulder replacement.

The AGILON® Extension Piece is intended for length adjustment in the case of a shoulder replacement.

The AGILON® Metaphyseal Component Trauma is a component intended to replace the metaphyseal part of the humerus in case of a traumatic destroyed shoulder joint.

The AGILON® Metaphyseal Component Omarthrosis is a component intended to replace the metaphyseal part of the humerus

The AGILON® Stem is a stem for cemented or cementless fixation intended for diaphyseal anchorage of the shoulder joint replacement in the humerus.

Medical Device(s): **MUTARS® Hip System**

Intended Use: The MUTARS® Hip System is the hip portion of the overall MUTARS® System. It is a modular hip replacement system offering various components that can be combined to replace the hip joint and address major bone defects with various options.

The MUTARS® Hip System provides modular proximal component for both neck replacements and proximal femoral replacements. Modular femoral stems, extension pieces, connection adaptors and end piece components are provided for use as needed in individual cases.

The MUTARS® Proximal Femur, Proximal Femur Revision, Filia Proximal Femur and RS Proximal Component are hip joint components that replace the proximal part of the femur.

The MUTARS® RS Metaphyseal Component is to be connected with the MUTARS® RS Proximal Component. Both components provide fixation in the metaphysis and fill for stable fixation in the area of the proximal femur. The MUTARS® RS Metaphyseal Component is intended to be used cementless.

The MUTARS® Stems provide diaphyseal anchorage of the joint replacement in the femur. The MUTARS® system includes curved stems for cemented and cementless applications. The MUTARS® Filia stem has two parts: the proximal part is for the extraosseous length adjustment and the distal part is for the diaphyseal anchorage in the femur.

MUTARS® Extension Piece and the Connecting Part are served as an extraosseous length adjustment in the area of the proximal femur for the bridging of bone defects. The MUTARS® RS Extension Piece serves as an intraosseous length adjustment in the area of the proximal femur.

The MUTARS® Reducer is for the extraosseous length adjustment in cases of a total femur replacement.

The MUTARS® Intramedullary Connecting Modules are used in cases of intramedullary femur replacements in which the femoral diaphysis is preserved, and the proximal femoral and knee joint are replaced by endoprotheses, which are then connected using an intramedullary rod.

The MUTARS® RS Cup is a cementless revision cup, which is used in cases of large acetabular bone defects. The MUTARS® RS Cup bridges the defect zone of the damaged acetabulum and allows for stabilization of the hip joint area.

The MUTARS® LUMiC® Acetabular Cup system is a modular acetabular reconstruction system, which restores hip function after massive acetabular bone loss (hemipelvectomy) or severe acetabular defects.

The Cup Inserts are inserted into the modular acetabular cups to provide the articulating surface as part of a total hip arthroplasty (THA). The implacross® PE Insert offer a standard cup-head mobility while the metallic 2M inserts allow in connection with the EcoFit® 2M Heads a dual mobility option.

The MUTARS® End Piece is used in rare cases of bone tumors and bone metastases in which no full extremity preserving surgery can be carried out. In combination with the MUTARS® Proximal Femur Replacement component, the End Piece can serve to prosthetically preserve a terminal femoral stump.

Medical Device(s): **MUTARS® Knee System**

Intended Use: The MUTARS® Knee System is the knee portion of the overall MUTARS® System. It is a modular hinge knee replacement system offering various components that can be combined to replace the knee joint and address major bone defects.

The MUTARS® GenuX® Femoral Component and MUTARS® GenuX® MK Femur [HD] are femoral components intended for cemented or cementless fixation to resurface the femoral condyles and trochlear groove.

The MUTARS® GenuX® MK Femur Monoblock [HD] is a femoral monoblock component intended for cemented fixation to resurface the femoral condyles and trochlear groove. It includes a stem for the attachment of the prosthesis from the distal femur into the diaphysis of the bone.

The MUTARS® Distal Femur [HD] [M-O-M] and MUTARS® KRI [HD] [M-O-M] are femoral components intended to replace the entire distal femur.

The MUTARS® Coupling (MUTARS® Locking Mechanism M-O-M), MUTARS® HD Coupling M-O-M/C-O-M and MUTARS® PEEK-OPTIMA® Lock are coupling components intended to connect a femoral to a tibial component to create a coupled joint that replaces the missing ligaments.

The MUTARS® Tibial Plateau is a tibial monoblock component intended for cemented or cementless fixation to resurface the tibial condyles. It includes a stem for the attachment of the prosthesis from the proximal tibia into the diaphysis of the bone.

The MUTARS® GenuX® MK Tibia Monoblock is a tibial monoblock component intended for cemented fixation to resurface the tibial condyles. It includes a stem for the attachment of the prosthesis from the proximal tibia into the diaphysis of the bone.

The MUTARS® BioXpand Tibial Plateau and MUTARS® MK BioXpand Tibial Plateau are tibial monoblock components intended for cementless fixation to resurface the tibial condyles. They include a stem for the attachment of the prosthesis from the proximal tibia into the diaphysis of the bone.

The MUTARS® Tibial Plateau Modular, MUTARS® Tibial Plateau M-O-M and MUTARS® GenuX® MK Tibia are modular tibial components intended for cemented or cementless fixation to resurface the tibial condyles.

The MUTARS® Modular Proximal Tibia and MUTARS® MK Proximal Tibia are tibial components intended to replace the entire proximal tibia.

The MUTARS® Femoral Spacer, MUTARS® L-Femoral Spacer and MK Femoral Spacer are femoral spacer intended for cemented fixation to fill and replace bone defects within the distal femur.

The MUTARS® Tibial Spacer and MK Tibial Spacer are tibial spacer intended for cemented fixation to fill and replace bone defects within the proximal tibia.

The MUTARS® GenuX® MK MB PE Insert is a tibial mobile-bearing insert intended to articulate with a femoral component.

The MUTARS® GenuX® MK FB PE Insert and MUTARS® PE-Insert are tibial fixed-bearing inserts intended to articulate with a femoral component.

The MUTARS® GenuX® [MK] Stem, MUTARS® Tibial Stem, MUTARS® Stem for Tibial Plateau Modular and MUTARS® GenuX® Offset Stem are stems intended for cemented or cementless fixation to serve as a diaphyseal anchorage in the femur and tibia respectively.

The MUTARS® GenuX® MK Extension Stem is a stem intended for cementless fixation to serve as a diaphyseal anchorage in the femur.

The MUTARS® Offset Adapter and MUTARS® GenuX® MK Offset Adapter are intended to adjust the offset between a tibial or femoral component and a stem.

The MUTARS® Patella Replacement is an all-poly patella implant intended for cemented fixation to resurface the natural patella.

The EPORE® metaphyseal component is intended to fill and replace large bone defects within the proximal tibia and distal femur respectively. It provides a stable support of the femoral and tibial components. It is intended for bone-side cementless fixation and is connected with the femoral or, respectively, tibial component via screws or mechanical clamping.
