

BiTrac™ NIV

The BiTrac NIV product family features a variety of interfaces that are designed to increase patient comfort and compliance in respiratory distress scenarios. The full face and nasal masks are highly adjustable, and their seal's design minimise pressure exerted on the bridge of the nose.

Our range of interchangeable elbows greatly reduces waste, as the mask's elbow can be easily removed and replaced when transitioning patients between standard ventilators and bilevel machines.

BiTrac Select™ NIV mask accessories and interchangeable elbows are available on page 135
