* The limb mates with the AUI stent graft on the ipsilateral side.

† These calculations assume the minimum 30 mm overlap between the bifurcated stent graft and the contralateral iliac limb per the Endurant™ II Stent Graft System Instructions For Use (IFU) When using the 124 mm length bifurcated stent graft, subtract 10 mm from total contralateral covered length with Bifurcated.

‡ The 3 – 5 stent overlap is available only with select limbs. Please refer to the Instructions For Use for more information. The contralateral iliac limb per the Endurant™ II Stent Graft System Instructions. For Use. PLACEMENT AND SIZING GUIDELINES

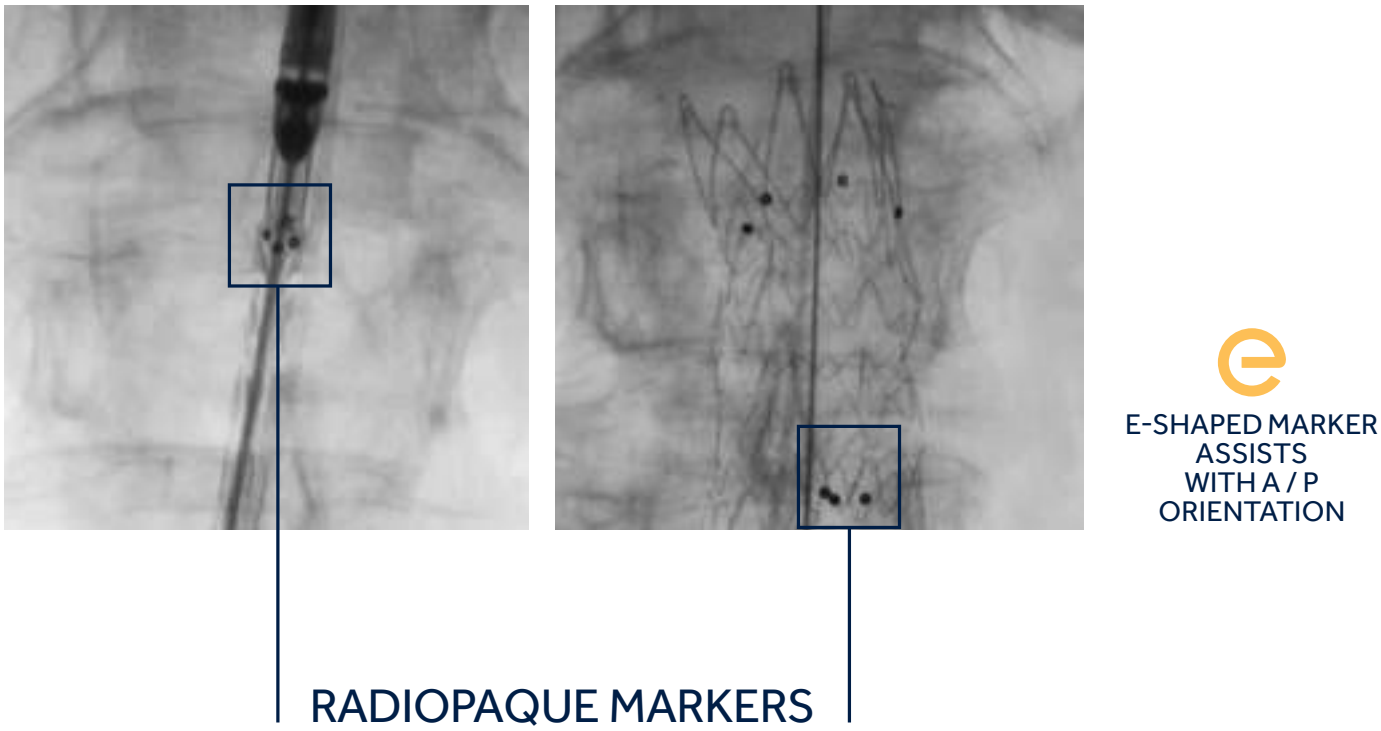
Use the proximal radiopaque markers to position the top edge of the graft material.



E-SHAPED MARKER ASSISTS WITH A / P ORIENTATION

For the contralateral side: The radiopaque markers at the proximal limb should be aligned with the radiopaque markers at the flow divider of the Endurant™ II or Endurant™ IIs bifurs.

For the ipsilateral side: Depending on the limb configuration used, the radiopaque markers at the proximal end of the limb should be aligned to the distal radiopaque marker on the ipsilateral leg or the flow divider marker of the Endurant™ IIs bifur.

Select limbs will allow a 3-5 stent overlap adjustment during the case.

Please refer to the Instructions for Use for more information as needed.

Talent™ Occluder

Endovascular Occluder

Occluder Stent Graft

Double spring configuration

- Securely anchors in the iliac artery to seal the lumen and to prevent retrograde blood flow

Expand your options

- The Occluder is a less invasive option to surgical ligation and is reported to have better results than coil embolization*

DISSECTION:
Do not oversize the stent graft more than 10% of the healthy aorta nominal diameter. The following table is provided as a guideline.

FOR ADDITIONAL SECTIONS:
When the stent graft junction is located within the aneurysmal sac or is not supported by tissue, 6 mm oversizing between the primary component and additional section is recommended. In the case when a 20 mm stent graft is used as an outside component, the diameter of the inside component should be oversized by 5 mm relative to the outside component.
When the stent graft junction is supported by tissue (e.g., dissections), the stent graft should be oversized relative to the supporting native vessel.

Valiant™ Captivia™

TAA Stent Graft System

Each Valiant™ Thoracic Stent Graft with Captivia™ Delivery System must be ordered in a size appropriate to fit the patient's anatomy. Proper sizing of the Valiant™ Captivia™ Thoracic Stent Graft Delivery System is the responsibility of the physician.

ANEURYSMS, PENETRATING ULCERS, AND TRAUMATIC RUPTURES:
Oversize the aortic portion of the stent graft by 3 to 5 mm as appropriate for the patient. The following table is provided as a guideline:

FOR ADDITIONAL SECTIONS:
When the stent graft junction is located within the aneurismal sac or is not supported by tissue, a 4 mm oversizing between the primary component and additional section is recommended. When the stent graft junction is supported by tissue (e.g., dissections), recommendations listed above.

The Entrust™ delivery system is a one-handed, triaxialstent delivery system with a low 5 F profile.

This low profile was achieved without compromising the design of the EverFlex™ stent or the 0.035" guidewire compatibility.

The device was engineered specifically for control and accuracy based on physician feedback provided during extensive interviews and procedural observations.

EverFlex™ stent: The DURABILITY II study proves strong stent performance with a 60% primary patency at 3 years.

EverFlex™ Entrust™ catheter lengths: 80 cm, 120 cm, 150 cm.

IntraStent™ LD

Large Diameter Stents

The IntraStent™ LD stent family of large-lumen stainless steel stents has been designed to supply a larger diameter device with the flexibility, strength, coverage, and profile normally associated with smaller diameter stents.

Three models are available:

InstraStent™ DoubleStrut™ LD peripheral stent

- Four-cell design for balanced radial strength and flexibility
- Low profile, 8 F introducer sheath
- Best choice for flexibility

InstraStent™ Mega™ LD peripheral stent

- Five-cell design for increased radial strength over the DoubleStrut LD Stent
- 9 F sheath compatibility
- Best choice for strength and flexibility

InstraStent™ Max™ LD peripheral stent

- Six-cell design for maximum strength and coverage
- 11 F sheath compatibility
- Best for strength

More choices

- The LD series of stents is available in a variety of designs to accommodate the unique needs of your patients

Innovative design

- Flexibility, strength and coverage delivered in ways not found in other large lumen stents
- Minimal shortening after expansion up to 12 mm
- Rounded edges minimize potential for lumen trauma

Predictable high-pressure treatment for AV access lesions

The high-pressure Fortrex™ PTA Balloon is the next-generation solution for deliverability, predictability, and procedural efficiency.

Deliverability

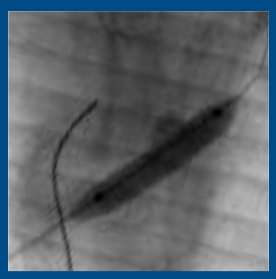
- Low tip entry profile enables tight tracking on the wire
- Robust, flexible shaft design facilitates successful navigation in tortuous vessels

Procedural efficiency

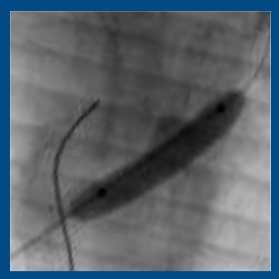
- Rapid deflation time contributes to reduced procedure length
- Balloon material and wall thickness permit reliable balloon rewrap into the sheath

Predictability

- Balloon material and design allow for shape retention at higher pressure
- Focal pressure is exerted on the lesion for controlled, targeted treatment



Fortrex™ Balloon
Pressure is directed toward the lesion



Competitive Design
Pressure is lost longitudinally

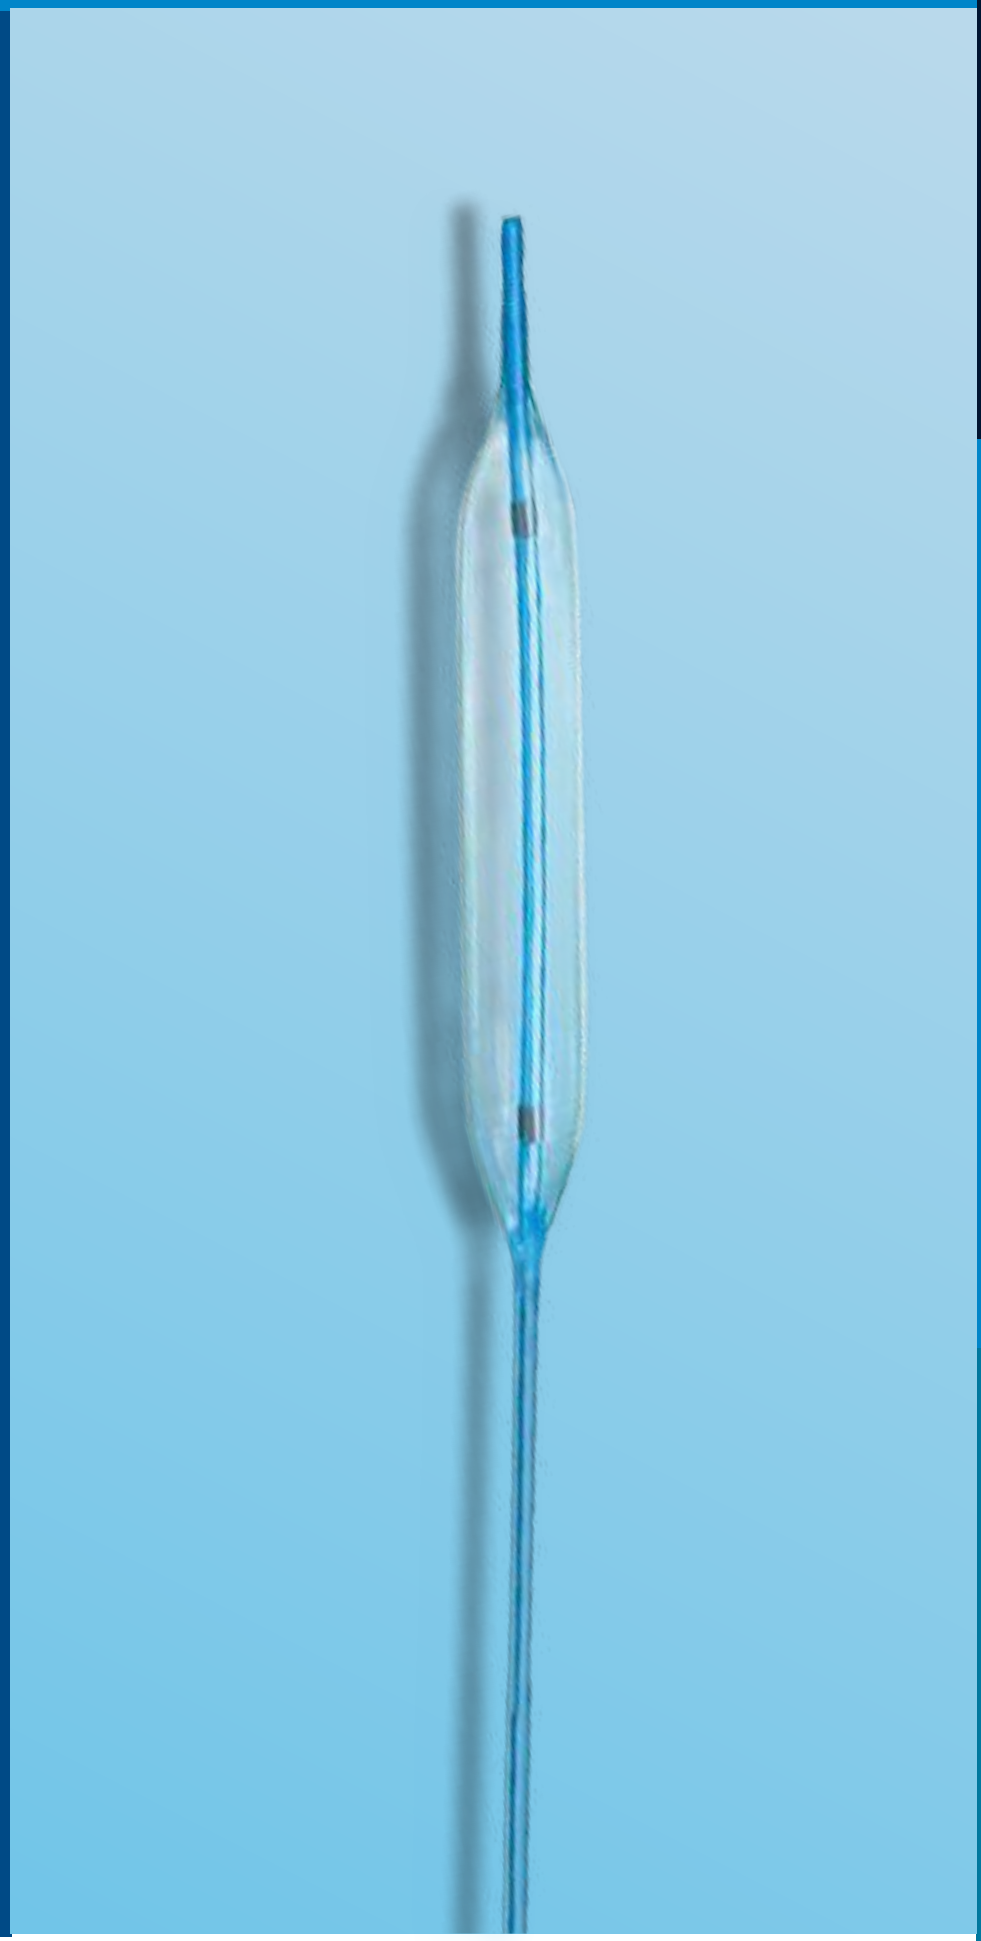
Submarine™ Rapido

PTA Balloon Catheter RX 0.018"

AORTIC

PERIPHERAL

VENOUS



Low profile with strength and control

Low profile

Compatible with 6F guiding catheter***

- Swaged "zero profile" markers enable easy penetration of the target lesion
- Special 3-folded balloon minimizes the re-wrap profile
- 0.021" tip entry profile to enhance crossability of subocclusive lesions

Strength and control

For carotid** and renal interventions, a delicate and high performance PTA is required

- Flexitec LP material allows for a wide working range from nominal pressure of 7 bar up to 17 bar RBP
- Controlled balloon compliance for exact sizing and reliable balloon performance

Shaft design

- Push transmission by homogeneous RX transition and adequate flexibility of the distal part
- Hydrophilic coating for swift and easy navigation

Size mix

- Broad size mix (including diameters up to 7 mm) makes this catheter appropriate for carotid* and renal interventions

One device for above and below the knee available in 6 F and 7 F sizes

Just as the name implies, the all-new HawkOne™ Directional Atherectomy System is one device that treats all morphologies[1], including severe calcium, and offers procedural efficiency with enhanced cutting, crossing, and cleaning capabilities.*

One device that:

- Treats all morphologies
- Offers procedural efficiency
- Restores blood flow in PAD patients

CUTTING BLADE
Four contoured cutting blades engage and treat all atherosclerotic morphologies.

DRIVE SHAFT
A four layered, counter-wound design efficiently transmits power, offering a **25%** improvement* in torsional performance.

JOG
Optimized* for improved engagement in calcified lesions with no increase in cut depth.

CUTTER DRIVER
Ergonomically redesigned to effectively treat all atheroscletoric plaque.

DISTAL TIP
A tapered, radiopaque distal tip provides enhanced* deliverability and visualization under angiography.

* Comparison and claims in reference to the TurboHawk™ High Efficiency Cutter.

TurboHawk™

Peripheral Plaque Excision System

Key features of the TurboHawk™ device

Cutter selection

The TurboHawk™ device has two cutter options to choose from depending on the procedural need and lesion morphology.

- High-efficiency cutter – tackles soft-to-moderately calcified lesions
- Smooth cutter – treats soft-to-mild calcification

Drive shaft

The counter-wound drive shaft transmits power more efficiently to the cutting blade.

Micro Efficient Compression (MEC)™ technology

Tiny, laser-drilled holes in the nose cone allow excess fluid to escape so physicians are able to capture more plaque with each pass of the cutting blade, potentially reducing the number of insertions and procedure time.

- 45% increase in tissue collection capacity with MEC technology

Dual catheter jog

The bend in the catheter enhances contact between the cutting blade and lesion, collecting more plaque with each pass.

Distal flush tool

The distal flush tool effectively cleans and flushes plaque from the device with increased pressure.

Tapered tip

The low-profile tip of the TurboHawk™ small-vessel catheter allows the device to maneuver through tortuous anatomies and challenging lesions with greater ease.

Catheter alignment marker

This feature easily aligns the nose cone with the distal flush tool for faster cleaning.

SilverHawk™

Peripheral Plaque Excision System

Our first-generation SilverHawk™ device treats PAD by removing soft-to-mild plaque buildup in leg arteries.

SilverHawk™ technology uses a directional cutting blade to shave plaque from the vessel—maximizing luminal gain. The plaque is captured in the nose cone of the device and safely removed from the vessel.

The SilverHawk™ device is backed by the landmark DEFINITIVE LE Clinical Study.

SpiderFX™

Embolic Protection System

The SpiderFX™ System is the only embolic protection device that works with any 0.014"or 0.018"guidewire of choice to cross the most challenging lesions.

The device offers enhanced visibility due to the nitinol frame with gold / tungsten marker. The extensive product portfolio permits treatment within a range of vessel sizes from 2 mm to 7 mm. The SpiderFX™ System is compatible with a guide catheter / sheath minimum ID of 0.066" (typically a 6 F guide catheter or 5 F access / long sheath). Check catheter manufacturer information for size compatibility.

The use of the SpiderFX™ device is strongly associated with:

- Lower costs
- Shorter inpatient hospital stays
- Lower ICU utilization rate
- Shorter OR times

Basket design

- The unique braided nitinol filter conforms to the vessel wall and maintains full-wall apposition during the intervention. Flow is directed into the filter's conical design, effectively capturing debris while maintaining blood flow

Visible markers

- A gold tungsten loop around the mouth of the filter, along with radiopaque markers, allows for precise positioning and verification of apposition before proceeding with the intervention

Wire movement

- The capture wire (available in 190 cm and 320 cm lengths) rotates and moves longitudinally, independent of the filter, for enhanced stability during the procedure
- The SpiderFX™ device is available in a variety of sizes (3 – 7 mm) for optimal fit and apposition in a range of vessels

Cragg-McNamara™

Valved Infusion Catheters

The Cragg-McNamara™ Valved Infusion Catheter is a single lumen infusion catheter with a valved tip that allows infusion without the need of a tip-occluding guidewire.

Large infusion lumen

Only 5 F Cragg-McNamara™ catheters give you the option to infuse without a guidewire in place, nearly doubling the infusion lumen area.

Streamlined patient care

Infuse overnight, without a guidewire in place which eliminates the risk of guidewire movement for simplified patient care.

Assured Closure. Delivered!

Obtura™
Vascular Closure Device

CE

Obtura™

Vascular Closure Device

Leading towards innovation Obtura™ Vascular Closure Device is an effective mechanical system for femoral artery puncture site closure.

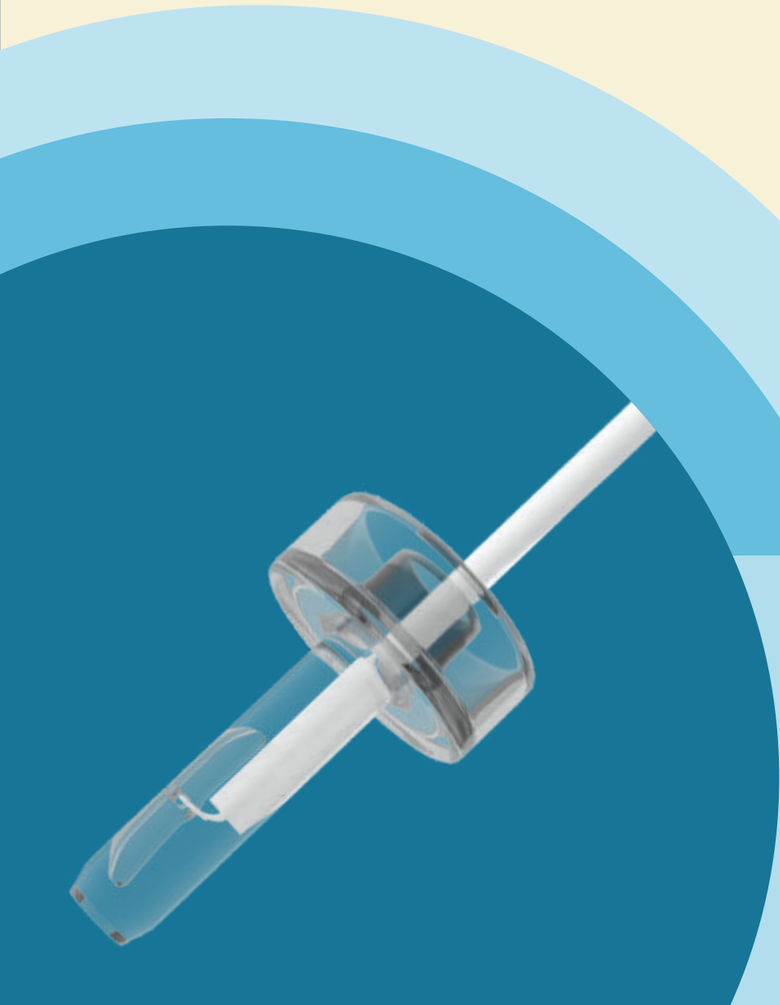
Incorporated with the Potent sealing system, it provides an unassailable sealing with the collagen plug and efficiently designed anchor. Obtura™ Vascular Closure Device is a simple 3-Step closure device making it easy to use and yielding rapid hemostasis.

NO exchange of introducer sheath

Specially designed Obtura™ is compatible with the standard existing introducer sheath used during the interventional procedures leading to less blood loss.

Rapid Hemostasis

Efficient Anchor-Collagen plug sandwiches the arteriotomy and gives rapid hemostasis at puncture site.

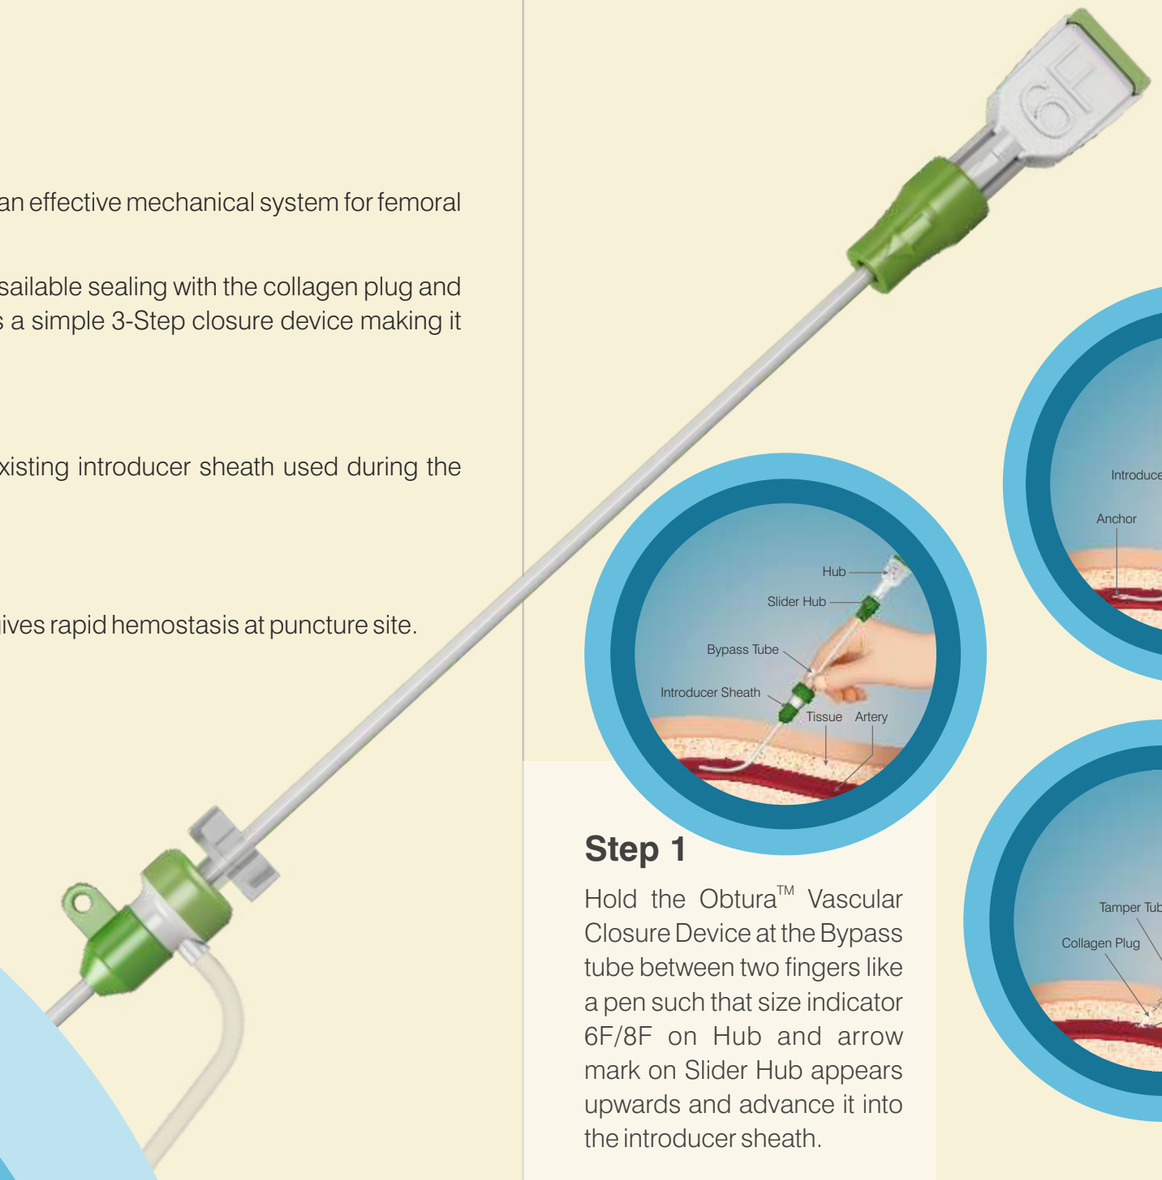


90 days absorption

Obtura™ facilitates patient friendly sealing with the implant deployed at the puncture site which is completely absorbed within 90 days.

Easy to use

Ergonomically designed Obtura™ is easy to use with minimal assistance and higher efficiency.

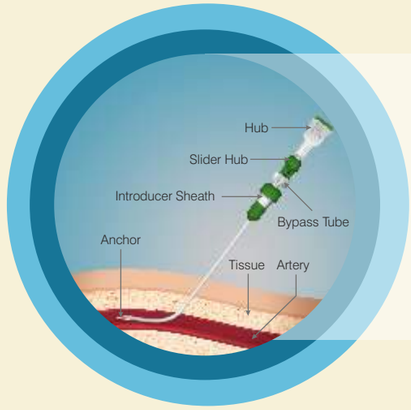


Less procedural time

With only 3 simple steps Obtura™ saves procedural time which leads to less blood loss and early patient ambulation.

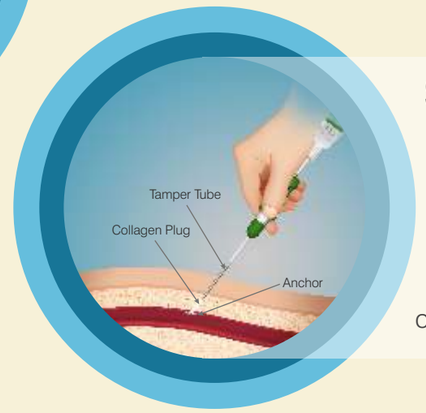
Step 1

Hold the Obtura™ Vascular Closure Device at the Bypass tube between two fingers like a pen such that size indicator 6F/8F on Hub and arrow mark on Slider Hub appears upwards and advance it into the introducer sheath.



Step 2

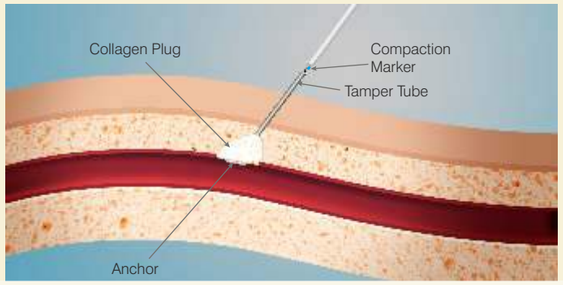
Holding the Slider Hub with one hand, pull the hub until the black marker appears.

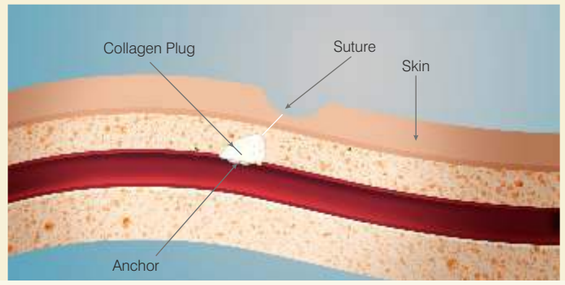


Step 3

Hold the three components Hub-Slider Hub - Hub of introducer sheath in the palm and retract the entire assembly along with the introducer sheath. Keep a tension on suture.

Deployment Result





Keeping a tension on suture , push the tamper tube towards puncture site simultaneously (push-pull motion) and cut the excess suture below the locking tube. Once the anchor and collagen plug are deployed, rapid hemostasis is achieved. No blood oozing out from the site of puncture indicates a complete sealing.

INDICATIONS: The proximal end of the adapter incorporates a standard ISO, female luer design to facilitate connection to the syringe. The distal end is designed specifically to fit the hub of Marathon™ and Apollo™ micro catheter 1.5F.

Echelon™ Syringe Adapter (ESA)

The Echelon™ syringe adapter was created to address an immediate need of physicians for an additional fully compatible micro catheter option for use with the Onyx™ liquid embolic system. The ESA establishes complete compatibility between Onyx™ liquid embolic system and Echelon™ micro catheter by:

1) Reducing dead space in the catheter hub, which prevents Onyx™ liquid embolic system and DMSO mixing in the hub.
2) Simplifying the preparation process. By increasing the compatibility in these ways, the ESA significantly improves the visualization of Onyx™ liquid embolic system under fluoroscopy.

BALLOONS

A single lumen design balloon catheter with a complete line of sizes of compliant and super compliant neurovascular balloons for the optimal support of neurovascular procedures. Hyper balloons are DMSO compatible.

HyperForm™ Occlusion Balloon System Line Extension

The HyperForm™ occlusion balloon system is a single lumen balloon catheter that requires the insertion of the 0.010" guidewire to occlude the central lumen to allow inflation of the balloon. When the distal 10 cm platinum coil tip of the guidewire is advanced to or past the catheter tip, it occuludes the inflation holes allowing the balloon to inflate through catheter sideholes.
