## EC DECLARATION OF CONFORMITY

We hereby declare that the devices described below comply with those provisions which apply to them of the European Directive 98/79/EC 'on *in vitro* diagnostic medical devices', and are placed on the European market by Mast Group UK through our appointed EC Authorised Representative Mast Diagnostica GmbH, Feldstrasse 20, 23858 Reinfeld, Germany.

This declaration is valid for the IVD medical devices described below on or after the date hereof, and which bear the CE mark. It is also valid for all IVD medical devices described below which are manufactured by Mast and placed on the market on or after the date hereof by third parties with our consent and which bear the CE mark. All supporting documents relating to this declaration are retained at the manufacturer's premises.

Product code	Product description	IVD Directive classification	EDMS code
Various	<b>MAST DISCS® AST</b> – paper antimicrobial susceptibility test (AST) disc products. Each disc contains an antimicrobial agent of stated content in conformance to a recognised AST standard such as European Committee on Antimicrobial Susceptibility Testing - EUCAST or US Clinical and Laboratory Standards Institute - CLSI.	Self-certification Annex III excluding section 6	1402050200 (Code registered - 02/12/2002) GMDN code - 17005

Standards applied: EN ISO 13485:2016, ISO 9001:2015, EN ISO 14971:2019, EN ISO 18113-1:2011, EN ISO 18113-2:2011, EN ISO 15223-1:2016, EN ISO 15223-2:2010.

Declaration made by .....  Date:03<sup>rd</sup> March 2021

D N Hogben, Quality Assurance and Regulatory Affairs Manager – Mast Group Ltd.

Document valid till: 26<sup>th</sup> May 2022

## EC DECLARATION OF CONFORMITY

We hereby declare that the devices described below comply with those provisions which apply to them of the European Directive 98/79/EC 'on *in vitro* diagnostic medical devices', and are placed on the European market by Mast Group UK through our appointed EC Authorised Representative Mast Diagnostica GmbH, Feldstrasse 20, 23858 Reinfeld, Germany.

This declaration is valid for the IVD medical devices described below on or after the date hereof, and which bear the CE mark. It is also valid for all IVD medical devices described below which are manufactured by Mast and placed on the market on or after the date hereof by third parties with our consent and which bear the CE mark. All supporting documents relating to this declaration are retained at the manufacturer's premises.

## EC CERTIFICATE – FULL QUALITY ASSURANCE SYSTEM

**In accordance with the requirements of the In Vitro Diagnostic Medical Devices Directive 98/79/EC and the Medical Devices Regulations 2002,  
UK Statutory Instrument 2002 No. 618**

This is to certify that the Quality Management System of:

**Mast Group Limited  
Mast House, Derby Road,  
Bootle, Merseyside  
United Kingdom**

has been assessed against the requirements of Annex IV of the In Vitro Diagnostic Medical Devices Directive 98/79/EC, and the Medical Devices Regulations 2002 and conforms to the requirements for the products shown on the attached certificate schedule.

Approval is subject to the maintenance of the quality system in accordance with the requirements of the above Directive and Regulations.

Authorisation is hereby given to use the LRQA Notified Body Registration Number in accordance with the requirements of the specified Directives/Regulations in relation to the products as identified above.

Certificate No: LRQ 0932114/C

Original Approval: 25 May 2004

Current Certificate: 1 June 2018

Certificate Expiry: 31 May 2021

# Certificate of Registration

**QUALITY MANAGEMENT SYSTEM - ISO 13485:2016 & EN ISO 13485:2016**

This is to certify that:

Mast Group Ltd  
Mast House, Derby Road  
Bootle  
Liverpool  
L20 1EA  
United Kingdom

Holds Certificate Number:

**MD 724379**

and operates a Quality Management System which complies with the requirements of ISO 13485:2016 &amp; EN ISO 13485:2016 for the following scope:

Design, manufacture and supply of in-vitro diagnostic devices for clinical microbiology and molecular biology and bacteriological media.

## MAST® CARBA PAcE

### Intended Use

**PACE-ID.** For the rapid detection of carbapenemase producing Enterobacteriales, *Pseudomonas*, OXA 48 and 23-like enzyme production in *Acinetobacter*.

FOR IN VITRO DIAGNOSTIC USE ONLY

### Contents

- **Vial PEL.** Freeze dried pellet\* - 4 vials containing inhibitors and lysis components, each designed for 12 tests.
- **Vial RB.** Reconstitution buffer\* - 4 vials containing chromogenic indicator resuspension buffer, each sufficient for 12 tests.
- Plastic 0.5 ml tubes, sufficient for 48 tests.

### Storage and shelf life

Store at 2 to 8°C in the containers provided until the expiry date shown on the pack label. Allow to equilibrate to room temperature before opening. Once reconstituted, test solution stored at 2 to 8°C, must be used within 4 weeks.

### Precautions

For *in vitro* diagnostic use only. Observe approved biohazard and aseptic techniques. To be used by only trained and qualified laboratory personnel. Sterilise all biohazard waste before disposal. Refer to product safety data sheets.

### Materials required but not provided

Standard microbiological supplies and equipment such as loops, MAST Group Ltd. culture media, table top vortexes, pipettes, incinerators and incubators, etc.

### Procedure

1. Reconstitute the pellet by tipping the entire contents of vial RB into vial PEL.
2. Allow the pellet to fully dissolve at room temperature for 1 minute and mix contents by gently vortexing for 10 seconds. Reconstituted solution should be yellow, if the solution is any other colour do not use.
3. Dispense 250µl of reconstituted solution into the tubes provided. One tube per test.
4. Using a pure, fresh culture of the test organism, take an approximate 1 to 5µl loopful of organism, and add to the tube containing test solution. Mix well by vortexing for 20 seconds.
5. Incubate at 35±1°C for 10 minutes.
6. Record the colour of the test solution immediately or up to 20 minutes after incubation.

Please refer to corresponding steps on the image page.

### Interpretation of results

If a colour change is recorded; from yellow to orange/red, record the organism as demonstrating carbapenemase activity.

If no colour change is recorded; solution remains yellow, record the organism as negative for carbapenemase activity.

### Quality control

Check for signs of deterioration. Quality control must be performed with at least one organism to demonstrate a positive reaction and another to demonstrate a negative reaction. Do not use the product if the reactions with the control organisms are incorrect. The list below illustrates a range of performance control strains which the end user can easily obtain.

Test Organism	Result
<i>Acinetobacter baumanii</i> NCTC 13301	Orange/Red Carbapenemase positive
<i>Pseudomonas aeruginosa</i> NCTC 13437	Orange/Red Carbapenemase positive
<i>Acinetobacter lwoffii</i> ATCC® 15309	Remains Yellow Carbapenemase negative
<i>Pseudomonas aeruginosa</i> ATCC® 25668	Remains Yellow Carbapenemase negative
<i>Klebsiella pneumoniae</i> NCTC 13438	Orange/Red Carbapenemase positive

### Limitations

1. Colonies isolated from indicator media are not recommended.
2. This product only detects the presence of a carbapenemase, differentiation can be carried out by using a suitable genotypic or phenotypic test (for example **MASTDISCS® Combi Carba Plus**; D73C).
3. Some GES-type carbapenemases might be difficult to detect.
4. To avoid potentially erroneous results, ensure that equipment used for testing is free of contamination.
5. Test results must be recorded within 20 minutes following the initial 10 minute incubation.
6. Results obtained with this kit must be considered alongside other clinically relevant data when diagnosing an infection.

# MAST® CARBA PAcE

*Pseudomonas, Acinetobacter, Enterobacterales*  
Rapid carbapenemase detection

- Rapid results in less than 10 minutes
- Simple test process in 5 easy steps
- Cost effective screening solution
- High sensitivity and specificity

# MAST® CARBA PAcE

An increase in antimicrobial resistance is one of the most urgent global challenges facing the field of healthcare. Healthcare associated infections (HAI) are one of the most common adverse effects in care delivery and the occurrences of epidemics of HAI are a major public health problem (WHO 2017).

Carbapenem resistant Gram negative bacteria, including Enterobacteriales (CRE), *Pseudomonas aeruginosa* and *Acinetobacter baumannii* are an emerging cause of HAI and accordingly a global public healthcare concern due to high levels of antimicrobial resistance and ability for widespread transmission.

It is important to recognise carriers quickly to prevent and control the spread in nosocomial and community settings and also to aid antibiotic stewardship.

## MAST® CARBA PAcE

**Mast Group Ltd.** remains at the forefront of the fight against such threats and as such has developed a colorimetric test which rapidly detects carbapenemase producing *Pseudomonas* spp., *Acinetobacter* spp. and Enterobacteriales using a novel chromogenic cephalosporin analogue for which there is a patent pending for its application.

The new **MAST® CARBA PAcE** is a simple cost effective screening solution providing fast results within 10 minutes, yet reliable in detecting carbapenemase production to support patient treatment. Additionally, no special equipment is required allowing it to be easily integrated into any laboratory workflows.

The basis of this colorimetric test is the hydrolysis of the chromogenic cephalosporin analogue, eliminating the effects of ESBL and AmpC enzymes using suitable inhibitor compounds, providing specific carbapenemase detection. Therefore only distinguishing epidemiologically significant carbapenem resistance, avoiding unnecessary patient isolation.

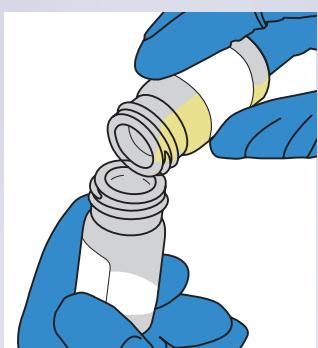

## Benefits of MAST® CARBA PAcE

<b>Rapid time to result</b>	<ul style="list-style-type: none"><li>Once the test organism is added to the test solution results are available within 10 minutes</li></ul>
<b>Cost effective</b>	<ul style="list-style-type: none"><li>Conveniently contains 48 tests per kit, allowing quick identification of carbapenemase producers, assisting with prompt isolation of carriers to prevent cross transmission</li></ul>
<b>Easily integrated into any laboratory</b>	<ul style="list-style-type: none"><li>Requiring only standard microbiological supplies making this adaptable to any laboratory workflows</li></ul>
<b>Easy to Use</b>	<ul style="list-style-type: none"><li>Simple test procedure, with 5 simple steps (see figure 1), colour change from yellow to orange/red indicates carbapenemase activity</li></ul>
<b>Quality</b>	<ul style="list-style-type: none"><li>Validated using a panel of organisms including VIM, IMP, NDM, OXA-48-like, OXA-23 and KPC high sensitivity and specificity of 96% and 91% respectively</li></ul>
<b>Complementary molecular range</b>	<ul style="list-style-type: none"><li>Provides a quality first tier screen prior to molecular detection and characterisation using <b>MAST ISOPLEX® CRE-ART</b>.</li></ul>

# MAST® CARBA PAcE

## Simple test Process

### Reconstitute

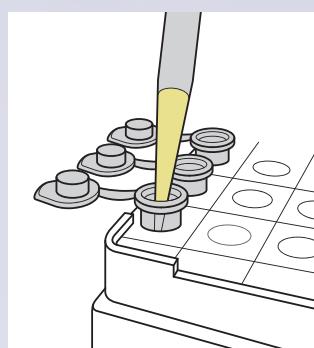

Reconstitute the pellet by tipping the entire contents of vial RB into vial PEL.

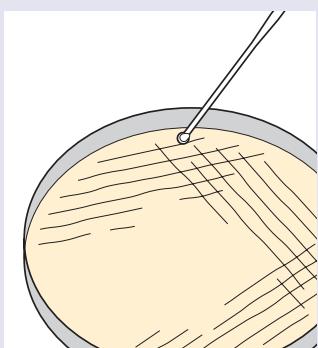

Allow the pellet to fully dissolve at room temperature for 1 minute and mix contents by gently vortexing for 10 seconds.

### Dispense

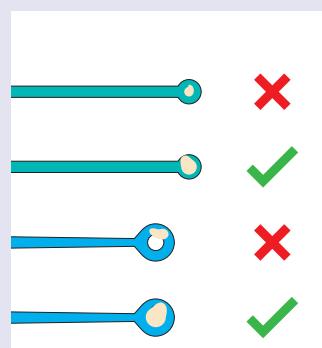

Dispense 250 $\mu$ l of reconstituted solution into the tubes provided. One tube per test.

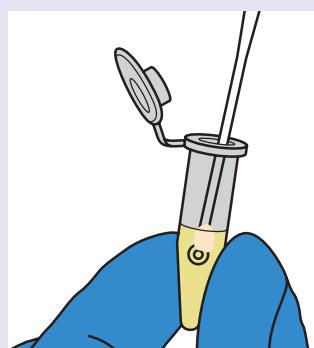

### Inoculate

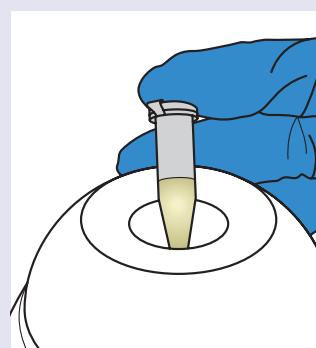

Use a pure, fresh culture of the test organism.

Take an approximate 1 - 5 $\mu$ l loopful of organism.

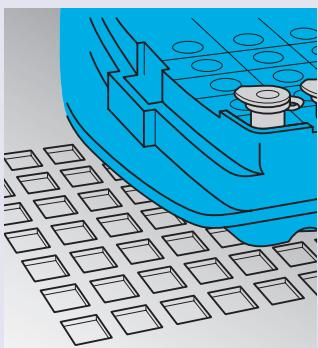

Add to the tube containing test solution.

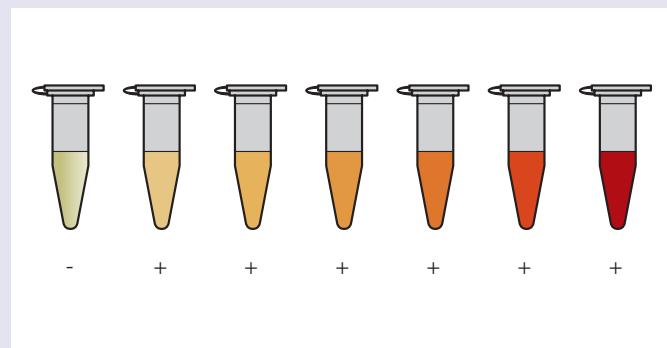

Mix well by vortexing for 20 seconds.

### Incubate

Incubate at 35±1°C for 10 minutes.

### Read by eye

Record the colour of the test solution immediately or up to 20 minutes after incubation.

## MASTDISCS®

### Antimicrobial Susceptibility Test Discs

**MASTDISCS®.** An extensive range of individual antimicrobial susceptibility test discs in glass vials and plastic dispensing cartridges.

FOR IN VITRO DIAGNOSTIC USE ONLY

**Contents:** 100 discs in a vial or a pack of 5 cartridges each cartridge containing 50 discs.

#### Formulation\*

6mm diameter filter paper discs printed with an appropriate identification code of letters and/or numbers and impregnated with accurately assayed quantities of antimicrobial agent.

#### Storage and shelf life

Store at 2 to 8°C in the containers provided until the expiry date shown on the pack label. Allow to equilibrate to room temperature before opening. Return to the refrigerator promptly after use.

#### Precautions

For *in vitro* diagnostic use only. Observe approved biohazard precautions and aseptic techniques. To be used only by adequately trained and qualified laboratory personnel. Sterilise all biohazard waste before disposal. Refer to Product Safety Data sheet.

#### Materials required but not provided

Standard microbiological supplies and equipment such as loops, MAST® culture media, swabs, applicator sticks, incinerators and incubators, etc., as well as serological and biochemical reagents and additives such as blood. Suitable interpretive criteria from standardised reference methods. MAST® DiscMaster Dispenser.

#### Procedure

MASTDISCS® should be used according to an appropriate standardised susceptibility test method. Various alternative methodologies are available and MASTDISCS® are compatible with these.

1. Remove the MASTDISCS® container from the refrigerator and allow to equilibrate to room temperature before opening.
2. Using a sterile needle or forceps, transfer each disc required onto the surface of a suitable plate of MAST® susceptibility test medium e.g. Mueller-Hinton Agar (DM170) dried and pre-inoculated with test organism according to the methodology followed.
3. If using MASTDISCS® in cartridges, load each cartridge required into a MAST® DiscMaster Dispenser.

4. Place the loaded DiscMaster Dispenser over the Petri Dish and dispense discs (see DiscMaster instructions for full details).
5. Incubate plates in air at 35 to 37°C for 18 to 24 hours (or alternative incubation conditions according to the methodology followed).
6. Measure (to the nearest whole mm) and record the diameter of any zones of inhibition that are observed around the antibiotic impregnated discs.

#### Interpretation of results

Interpret measured zones of inhibition by reference to published tables of critical zone diameter breakpoints provided by appropriate authorities and classify test isolate as Susceptible (S), Intermediate (I) or Resistant (R).

#### Quality control

Check for signs of deterioration. Quality control must be performed with at least one organism to demonstrate a correct susceptibility pattern. Do not use the product if the reactions with the control organisms are incorrect. The list below illustrates a range of performance control strains which the end user can easily obtain.

Test Organisms	
<i>Escherichia coli</i> ATCC® 25922	Correct susceptibility pattern*
<i>Pseudomonas aeruginosa</i> ATCC® 27853	Correct susceptibility pattern*
<i>Staphylococcus aureus</i> ATCC® 25923	Correct susceptibility pattern*

\*See appropriate quality control table

#### Limitations

Any deviation from the prescribed method may produce incorrect results.

The latest published version of the method used should be consulted for complete details of test procedures and interpretive criteria.

#### References

Bibliography available on request.

# mastdiscs™

Testsysteme für die  
antimikrobielle Empfindlichkeitstestung  
und bakterielle Identifizierung

- Umfangreiche Auswahl an Testblättchen und Testringen
- Höchste Qualitätsstandards
- Gemäß EUCAST Richtlinien
- Kundenspezifische Sonderanfertigungen auf Anfrage

Die Mast Group ist seit 1957 erfolgreicher Produzent von Produkten für die antimikrobielle Empfindlichkeitstestung und nimmt auch zukünftig seine Verantwortung bei der Entwicklung und dem Vertrieb qualitativ hochwertiger Produkte für den klinischen Sektor wahr. Mit einem stetig wachsenden Produktportfolio an Testblättchen und Testkits für spezifische Fragestellungen im Bereich der antimikrobiellen Empfindlichkeitstestung und bakteriellen Identifizierung verfügt die Mast Group weltweit über eines der umfangreichsten Produktsortimente auf dem Markt.

Agardiffusionstests mittels Testblättchen sind immer noch die Methode der Wahl zur schnellen und einfachen Bestimmung der antibiotischen Empfindlichkeit von isolierten Erregern bei Infektionskrankheiten. Dies wird insbesondere durch nationale und internationale standardisierte Verfahren verschiedener Kommissionen und Institute wie das Deutsche Institut für Normung (DIN), The European Committee on Antimicrobial Susceptibility Testing (EUCAST), The Clinical and Laboratory Standards Institute (CLSI) und The British Society for Antimicrobial Chemotherapy (BSAC) verdeutlicht.

MASTDISCS™ umfassen eine umfangreiche Auswahl an verschiedenen antibiotischen Substanzen und sind in Form von Testblättchen in Kartuschen oder Flakons erhältlich. Alle Produkte erfüllen höchste Qualitätsstandards in Übereinkunft mit den standardisierten Testprotokollen der genannten nationalen und internationalen Organisationen.

#### **Sonderanfertigungen:**

Mast bietet den besonderen Service, kundenspezifische Sonderanfertigungen auf Anfrage zu produzieren.

1 Flakon mit 100 losen Testblättchen (Mindestabnahme: 20 Flakons je Sorte)

1 Packung mit 5 Kartuschen zu je 50 Testblättchen (Mindestabnahme: 20 Packungen je Sorte)

Für weitere Details bezüglich Beschaffungs- und Lieferzeiten kontaktieren sie bitte den Kundenservice!

# MASTDISCS®

Leading the field with a complete solution  
for AST and Identification disc testing

- Comprehensive range
- Premium quality products
- Compatible with EUCAST and CLSI standards
- Bespoke service available

Mast Group Ltd., has been a manufacturer of antibiotic susceptibility test products since 1957, and continues to be at the forefront of developments in this field. With an ever-expanding portfolio of antibiotic susceptibility, combination and identification discs, Mast Group Ltd. supplies the most comprehensive range available worldwide. Mast Group Ltd. also offers a range of services including **mastpharma®** development and **mastpharma®** stability for the evaluation of novel antimicrobial compounds for the pharmaceutical industry.

Disc diffusion is still the most popular method for determining bacterial antibiotic susceptibility in the treatment of infectious disease, as highlighted by the variety of international standardised procedures including The European Committee on Antimicrobial Susceptibility Testing (EUCAST) and The Clinical and Laboratory Standards Institute (CLSI). From January 2016 The British Society for Antimicrobial Chemotherapy (BSAC) guidelines were superseded by EUCAST. Mast Group Ltd. continues to support laboratories with the supply of BSAC concentrations until January 2020.

**MASTDISCS®** are available as an extensive range of test discs presented in dispensing cartridges or vials, with quality assurance guaranteed in accordance to standardised test protocols as issued by the above national and international organisations.
