

ESPUMA® Gentle Family

Soft Silicone Polyurethane Foam Dressings

Description:

ESPUMA® Gentle is absorbent wound dressing made of polyurethane foam .The outermost layer is bacteria-proof, virus-proof and waterproof polyurethane film. The wound contact layer is perforated soft silicone gel that allows painless and atraumatic removal and permits the passage of exudate to the absorbent foam layer.

ESPUMA® Gentle Lite consists of thin absorbent polyurethane foam layer.

ESPUMA® Gentle Comfort consists of absorbent foam layer having an adhesive outermost polyurethane border, so the dressing can be applied without fixation tape or secondary dressing.

ESPUMA® Gentle Lite Comfort has a thin foam layer with an adhesive outermost PU border.

ESPUMA® Gentle C Comfort is an absorbent foam with additional non-woven layer containing activated carbon to adsorb offensive odour and with an adhesive outermost PU border.

ESPUMA® Gentle Lite C Comfort differs from the previous variant in having a thinner polyurethane foam layer.

ESPUMA® Gentle Xtra Comfort is a multi-layered dressing consisting of absorbent foam with additional highly absorbent layer and having an adhesive outermost border.

ESPUMA® Gentle C Xtra Comfort is a multi-layered dressing consisting of absorbent foam, with additional highly absorbent layer plus a non-woven layer containing activated carbon to adsorb offensive odour and having an adhesive outermost border.

ESPUMA® Gentle Transfer is composed of thin polyurethane foam layer, but without polyurethane top sheet, so that the dressing can transfer exudates away from the wound into a secondary absorbent dressing.

Features:

- Comfortable: as the dressing is easy to remove and minimize trauma during dressing changes.
- Cushioning effect: as it acts as a barrier against irritation and constant pressure on the skin.
- Breathable: the semi-permeable backing allows moisture to escape.
- Prevents skin maceration: as the perforated silicone film allows free passage of wound exudate to the foam.
- Additional carbon layer in some variants: adsorbs offensive odour in case of malodorous wounds.
- Additional superabsorbent layer in some variants: increases the absorption capacity of the dressing for highly exuding wounds.

Intended Purpose:

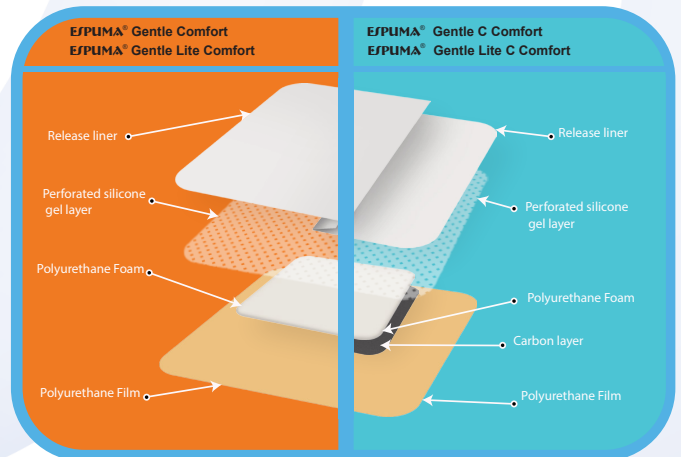

ESPUMA® Gentle Family is an effective tool for moist wound healing, having high capacity of autolytic debridement and it is particularly useful in preventing dressing-related trauma especially in people with fragile skin. It's indicated for a wide range of exuding wounds as: pressure ulcers, leg ulcers, diabetic foot ulcers, skin graft, first and second degree burns. Can be used in combination with compression therapy.

The Lite variants are indicated for low exuding and traumatic wounds as: abrasions, blisters and skin tears.

The variants containing carbon are for malodorous acute and chronic wounds as carbon adsorb offensive odor.
